Legal Aspects of Code Administration ,2017

Applying the Building Code Ronald L. Geren,2016-03-21 No other resource—not even the building code—presents the exact code information you need, when you need it at design stage The International Building Code (IBC) is a model building code developed by the International Code Council (ICC). The IBC and its complementary codes provide design and construction professionals with a complete set of comprehensive, coordinated building safety and fire prevention regulations in order to safeguard the public health and general welfare of the occupants of new and existing buildings and structures. Adopted throughout most of the United States and its territories, it is referenced by federal agencies, such as the General Services Administration, National Park Service, Department of State, U.S. Forest Service, and the Department of Defense. For architects and other design and construction professionals, it is particularly important that they understand how to apply the IBC and how code officials view buildings, so that they integrate code-required provisions in the earliest design stages of any project. Applying the IBC, as well as its companion codes, to building design is a process that is uniquely different to that of applying the building code during a planning review. Whereas other guide books explain the IBC in sequential order, from cover to cover, chapter by chapter, and section by section, *Applying the Building Code* explains the requirements of the IBC as they would apply during the common phases of design: from schematic design through to the preparation of construction documents. This effectively highlights applicable requirements of the building code at the appropriate stage of design based on available information. The book provides a 28-step process that is organized according to the three phases of architectural design: schematic design, design development, and construction documents Each step explains the application of the

IBC, as well as other codes and standards referenced by the IBC (i.e. International Fire Code, International Energy Conservation Code, and ANSI A117.1) based on available project information. Illustrations and examples are provided throughout that explain the code fundamentals associated with each step. A single example project is used throughout the step-by-step process to illustrate how each step is applied and builds upon code and project information obtained through previous steps. Guidance is also provided on the International Existing Building Code and how the step-by-step process is applied to projects involving existing buildings. The role of the building department and its staff in regard to plan reviews and code enforcement is discussed. A detailed code data information template is provided that can help organize code-related information for construction documents.

Managing Online Forums Patrick O'Keefe, 2008-04-21 Every day, millions of users log on to their favorite online forums and interact with others to get advice and discuss everything from the latest news and trends to their hobbies, professions, and whatever else strikes their fancy. Administrators have to lead these communities, deal with difficult users, and choose moderators. Legal

constraints, spammers, and technical issues can turn the excitement of running an online community into chaos. With the right guidance, however, running forums can be a pleasure. Patrick O’Keefe has spent years developing and managing online communities. Now, he shows readers how to make the right decisions about every aspect of their forums, including: • choosing a name and domain name • picking the right software • deciding on user options like avatars and private messaging • setting guidelines and dealing with violators • ensuring that posts stay on topic • settling online disputes among users • involving users and keeping the site interesting Managing Online Forums is the one book that shows site owners and administrators how to create a safe and entertaining community that users will return to again and again.

Building Codes and Historic Buildings Melvyn Green, Anne Watson, 2005 If you own a historic building, what do you need to know about building codes? How do you find out which codes and other regulations apply in your community? When must you strictly adhere to the code provisions, and when can you and the code official work out an alternative that preserves your buildings historic features? These are just some of the questions answered in *Building Codes and Historic Buildings*, by Melvyn Green, P.E., and Anne Watson. The main key to using building codes for historic structures is to learn how to work within the system, the authors state. Know which codes apply to the project and how to use those codes to produce the best safety and preservation results. *Building Codes and Historic Buildings* will help you to do that. Its an easy-to-follow reference, with case studies, that provides a basic overview for new property owners, and also clarifies points and fills in information for more experienced owners.
