The Consciousness of the Atom Alice A. Bailey, 2021-11-15 The Consciousness of the Atom Alice A. Bailey - Discusses the scientific relation of matter and consciousness as evolution progressively affects the atomic substance of all forms. This book talks about how the atom emerges as a miniature but complete replica of the energy structure common to all forms of life - cosmic, planetary, human and subhuman.

The Consciousness of the Atom Alice Bailey, 2020-03-30 The Consciousness of the Atom is a series of lectures of Alice Bailey which guides the reader through her Theosophist theory. Theory is based on contemporary scientific discoveries regarding the atom, philosophy and both Eastern and Western religions, applying what is known about the atom to the cosmos, the solar system and to humankind. In Bailey's teaching, God is not definitely defined as existing in the biblical sense, but as a force of energy.

The Consciousness of the Atom Alice A. Bailey, 2019-09-20 Alice A. Bailey is one of the most noteworthy figures of early 20th century Theosophy. Mostly known for her revealed works, she also penned several books and compilations of lectures; this being one of them, namely on the subject of the atom, its spiritual significance, and attendant subjects. Some of the claims it makes are actually accepted today (such as the energetic form of the atom, in the basic sense) while some of its material (the human as a central radiation point) is largely considered to be pseudoscientific. A fascinating look at early 1920s scientific thought as well as religion.

The Consciousness of the Atom (Classic Reprint) Alice A. Bailey, 2017-10-13 Excerpt from The Consciousness of the Atom There has probably never been a period in the history of thought entirely resembling the present. Thinkers everywhere are conscious of two things, first, that the region of mystery has never before been so clearly defined, and secondly, that that region can be entered more easily than has hitherto been the case; it may, therefore, perhaps be induced to render up some of its secrets if investigators of all schools pursue their search with determination. The problems with which we are faced, as we study the known facts of life and existence, are susceptible of clearer definition than heretofore, and though we do not know the answer to our questions, though we have not as yet discovered the solution to our problems, though no panacea lies ready to our hand whereby we can remedy the world's ills, yet the very fact that we can define them, that we can point in the direction in which mystery lies, and that the light of science, of religion, and of philosophy, has been shed upon vast tracts which were earlier considered lands of darkness, is a guarantee of success in the future. We know so much more than was the case five hundred years ago, except in a few circles of wise men and mystics; we have discovered so many laws of nature, even though as yet we cannot apply them, and the knowledge of things as they are (and I choose these words very deliberately) has made immense strides. Nevertheless, the mystery land still remains to be opened up, and our problems are still numerous. There is the problem of our own particular life, whatever that may be; there is the problem of that which is largely termed the not-self, and which concerns our physical body, our environment, our circumstances, and our life conditions; if we are of an introspective turn of mind, there is the problem of our particular set of emotions, and of the thoughts, desires, and instincts by which we control action. Group problems are many; why should there be suffering, starvation, and pain? Why should the world as a whole be in the thrall of the direst poverty, of sickness, of discomfort? What is the purpose underlying all that we see around us, and what will be the outcome of world affairs, viewing them as a whole? What is the destiny of the human race, what is its origin, and what is the key to its present condition? Is there more than this one life, and is the sole interest to be found in that which is apparent and material? Such queries pass through all our minds at various times, and have passed through the minds of thinkers right down through the centuries. The Consciousness of the Atom, Alice A. Bailey Alice A. Bailey, 2018-11-25 The lectures here presented were delivered in New York during the past winter. The purpose of this series was to present to their auditors the testimony of science as to the relation of matter and of consciousness; to enable the hearers to observe the identical manifestation of these relations and of certain basic laws in successively higher states of being, and thus to bring to them a realization of the universality of the evolutionary process and its actuality; and to deal somewhat with the nature of the expanded states of consciousness and the enlarged life toward which all mankind is traveling. They thus were intended to serve as an introduction to the more detailed study and application of the laws of life and human enfoldment generally included in the term of occultism. It will be observed that there is in this series a considerable amount of repetition, as each lecture briefly reviews the matters covered in the preceding addresses. As newcomers were present at each lecture in the series, it was found necessary on each occasion to present a bird's eye view of the ground covered and the reasons for the position then taken. A further advantage was found in the fixing in the minds of the hearers of certain of these basic concepts which were new to many of them, and which helped to enable them to grasp and to receive readily the further expansion of the theme. In presenting the lectures in book form it has been deemed advisable to retain the complete text of the lectures as given. Those who are already students of the esoteric wisdom will be able to follow the line of the argument of the lectures without difficulty. For those however, who for the first time approach the consideration of the matters here discussed, the occasional repetition of the fundamental points may help to a ready apprehension, and it is for this class of readers that the book is primarily intended. The Consciousness of the Atom Alice Bailey, 2008-12-03 A classic series of lectures concerning the evolution of Consciousness, amidst the manifestation of an ever evolving Reality, the expanding evolution of the individual and of Mankind, and the Cosmos.

The 4 States of Consciousness Michael Mathiesen, 2016-10-09 Every living thing with a brain has some form of Consciousness, or an awareness of who or what they are and the role they play in the universe. But few of the living really know what to do with that information. Electrons make up the first state of Consciousness. We now know that they can learn about each other and bind together for life like a marriage in what's known as 'Entanglements.' Whenever the state of one 'Entangled' electron is changed, the other one in the pair knows about it and it changes instantly to show unification. This happens instantly no matter how far away the two may be from one another. How do they know? The only answer is 'Consciousness'. From there, the forces of Nature allow the Electrons to pass their subatomic level of Consciousness up to the level of Atoms, structured out of the building blocks of the electrons, protons, etc. From there, the Atoms, or Elements are able to pass up their form of Consciousness to the molecular level. Remember the Avogadro's Number? From the molecular level, molecules are able to pass on their level of Consciousness to all living things, the 4th and highest State of Consciousness for all living things - what I call the Feedback Loop. We are all part of that loop. It's a loop because even at the highest level of Consciousness, we still use Electrons to create and transport our thoughts throughout our brains. This book is an answer to some of the greatest questions of all time and they are: 'Where do we come from?' 'Why are we here?' and 'What can we do about it?'

The Universe in a Single Atom Dalai Lama, 2006-09-12 Galileo, Copernicus, Newton, Niels Bohr, Einstein. Their insights shook our perception of who we are and where we stand in the world, and in their wake have left an uneasy coexistence: science vs. religion, faith vs. empirical inquiry. Which is the keeper of truth? Which is the true path to understanding reality? After forty years of study with some of the greatest scientific minds, as well as a lifetime of meditative, spiritual, and philosophic study, the Dalai Lama presents a brilliant analysis of why all avenues of inquiry—scientific as well as spiritual—must be pursued in order to arrive at a complete picture of the truth. Through an examination of Darwinism and karma, quantum mechanics and philosophical insight into the nature of reality, neurobiology and the study of consciousness, the Dalai Lama draws significant parallels between contemplative and scientific examinations of reality. This breathtakingly personal examination is a tribute to the Dalai Lama's teachers—both of science and spirituality. The legacy of this book is a vision of the world in which our different approaches to understanding ourselves, our universe, and one another can be brought together in the service of humanity.

Molecular Consciousness Françoise Tibika, 2012-12-14 Mind and matter are connected through information at the atomic level • Explains how your state of mind is profoundly related to the flow of chemical information during the interactions of your molecules • Reveals how each atom of the universe is intrinsically linked with all other atoms through their memories and the information they carry • Explores the concrete manifestations of this “molecular consciousness,” such as intuition and the appearance of life on Earth The molecules of living organisms are in constant communication, storing and transmitting information both at the intracellular level as well as across vast distances. The mystery of how this communication occurs—whether through molecular structure, chemical reactions, entangled states, or some other method—has baffled biologists, chemists, and quantum physicists for more than a century. Revealing the intimate connections between mind and matter, Françoise Tibika explains that conscious communication exists all the way down to the very molecules of which we—and the universe—are made. Using the fundamental laws of thermodynamics to support her argument—especially the first law: “energy is neither created nor destroyed”—as well as modern scientific research in quantum physics and molecular biology, Tibika explores how each imperishable atom of the universe is intrinsically linked with all other atoms through their memories and the information they carry. She shows not only how each atom of your being is part of the greater whole of the universe but also how your thoughts, feelings, and state of mind are profoundly related to the activity of each of your molecules. Just as we are undergoing constant transformation by the molecules surrounding us, our own molecules are continuously transforming the network of which we are a part. Exploring the concrete manifestations of this molecular consciousness, such as intuition, Tibika reveals how, through effecting conscious change at the molecular level, our actions have far-reaching significance in a universe that is not blind to our presence.

Atom Lawrence M. Krauss, 2001-04-11 The story of matter and the history of the cosmos from the perspective of a single oxygen atom, told with the insight and wit of one of the most dynamic physicists and writers working today. Through this astonishing work, he manages to stoke wonder at the powers and unlikely events that conspired to create our solar system, our ecosystem, and us.
