Economic Time Series William R. Bell,Scott H. Holan,Tucker S. McElroy,2012-03-19 Economic Time Series: Modeling and Seasonality is a focused resource on analysis of economic time series as pertains to modeling and seasonality, presenting cutting-edge research that would otherwise be scattered throughout diverse peer-reviewed journals. This compilation of 21 chapters showcases the cross-fertilization between the fields of time series modeling and seasonal adjustment, as is reflected both in the contents of the chapters and in their authorship, with contributors coming from academia and government statistical agencies. For easier perusal and absorption, the contents have been grouped into seven topical sections: Section I deals with periodic modeling of time series, introducing, applying, and comparing various seasonally periodic models Section II examines the estimation of time series components when models for series are misspecified in some sense, and the broader implications this has for seasonal adjustment and business cycle estimation Section III examines the quantification of error in X-11 seasonal adjustments, with comparisons to error in model-based seasonal adjustments Section IV discusses some practical problems that arise in seasonal adjustment: developing asymmetric trend-cycle filters, dealing with both temporal and contemporaneous benchmark constraints, detecting trading-day effects in monthly and quarterly time series, and using diagnostics in conjunction with model-based seasonal adjustment Section V explores outlier detection and the modeling of time series containing extreme values, developing new procedures and extending previous work Section VI examines some alternative models and inference procedures for analysis of seasonal economic time series Section VII deals with aspects of modeling, estimation, and forecasting for nonseasonal economic time series By presenting new methodological developments as well as pertinent empirical analyses and reviews of established methods, the book provides much that is stimulating and practically useful for the serious researcher and analyst of economic time series.

Resurgent Asia Deepak Nayyar,2019 Resurgent Asia analyses the phenomenal transformation of Asia, which would have been difficult to imagine, let alone predict, fifty years ago, when Gunnar Myrdal published Asian Drama. In doing so, it provides an analytical narrative of this remarkable story of economic development, situated in its wider context of historical, political, and social factors, and an economic analysis of the underlying factors, with a focus on critical issues in the process of, and outcomes in, development. In 1970, Asia was the poorest continent in the world, marginal except for its large population. By 2016, it accounted for three-tenths of world income, two-fifths of world manufacturing, and one-third of world trade, while its income per capita converged towards the world average. However, this transformation was associated with unequal outcomes across countries and between people. The analysis disaggregates Asia into its four constituent sub-regions--East, Southeast, South, and West--and further into fourteen economies--China, India, South Korea, Indonesia, Turkey, Taiwan, Thailand, Philippines, Malaysia, Singapore, Pakistan, Bangladesh, Vietnam, and Sri Lanka--which account for more than four-fifths of its population and income. This book enhances our understanding of development processes and outcomes in Asia over the past fifty years, draws out the analytical conclusions that contribute to contemporary debates on development, and highlights some lessons from the Asian experience for countries elsewhere. It is the first to examine the phenomenal changes that are transforming economies in Asia and shifting the balance of economic power in the world, while reflecting on the future prospects in Asia over the next twenty-five

years. A rich, engaging, and fascinating read.
