

# The Effect Sounder

George Bartlett Prescott

*Sounder* William H. Armstrong,2011-07-12 This powerful Newbery-winning classic tells the story of the great coon dog Sounder and his family. An African American boy and his family rarely have enough to eat. Each night, the boy's father takes their dog, Sounder, out to look for food. The man grows more desperate by the day. When food suddenly appears on the table one morning, it seems like a blessing. But the sheriff and his deputies are not far behind. The ever-loyal Sounder remains determined to help the family he loves as hard times bear down. This classic novel shows the courage, love, and faith that bind a family together despite the racism and inhumanity they face in the nineteenth-century deep South. Readers who enjoy timeless dog stories such as Old Yeller and Where the Red Fern Grows will find much to love in Sounder, even as they read through tears at times.

**A Numerical Study of the Effect of GOES Sounder Cloud-Cleared Brightness Temperatures on the Prediction of Hurricane Felix** ,1999 The influence of satellite brightness temperature data on the retrospective numerical prediction of Hurricane Felix is investigated. Satellite data are included as an augmentation to bogus data assimilation (BDA) procedure using a mesoscale adjoint modeling system. Assimilation of satellite brightness temperature data was found to have positive impact on both the intensification and track forecast of the hurricane. The improvements made by the simulations using satellite brightness temperatures were realized by intensifying low-level warm ridge located west of the hurricane, reducing the amount of water vapor below 500 hPa over most areas where satellite data are available, and modifying the structures of the initial vortex in the model initial condition. Although being located over a region devoid of satellite data, the initial vortex obtained using both the satellite and bogus surface low data is more realistic than the one using only the bogus data. Despite the fact that the forecast (3.5 days) using only the bogus surface low at the initial time was quite good, track and intensity forecasts beyond 2 days of model integration were shown to be further improved by including satellite data in the initialization procedure. Differences in the prediction of Hurricane Felix with and without satellite data were also found in the prediction of upper-level jet, the cold temperature trough ahead of the hurricane, the size of the hurricane eye, and the location of maximum rainfall during the 3.5 day forecast period. While the focus of this study is to assess the impact of the direct use of satellite brightness temperature data on hurricane prediction, we also noted that the BDA experiment assimilating only the bogus data shows a positive impact of the BDA generated hurricane on the environmental flow, as verified by satellite observations.
