The Expression of the Emotions in Man and Animals Charles Darwin, 2016-02-22

INTRODUCTION. MANY works have been written on Expression, but a greater number on Physiognomy,—that is, on the recognition of character through the study of the permanent form of the features. With this latter subject I am not here concerned. The older treatises, [1] which I have consulted, have been of little or no service to me. The famous 'Conferences' [2] of the painter Le Brun, published in 1667, is the best known ancient work, and contains some good remarks. Another somewhat old essay, namely, the 'Discours,' delivered 1774-1782, by the well-known Dutch anatomist Camper, [3] can hardly be considered as having made any marked advance in the subject. The following works, on the contrary, deserve the fullest consideration. Sir Charles Bell, so illustrious for his discoveries in physiology, published in 1806 the first edition, and in the third edition of his 'Anatomy and Philosophy of Expression.' [4] He may with justice be said, not only to have laid the foundations of the subject as a branch of science, but to have built up a noble structure. His work is in every way deeply interesting; it includes graphic descriptions of the various emotions, and is admirably illustrated. It is generally admitted that his service consists chiefly in having shown the intimate relation which exists between the movements of expression and those of respiration. One of the most important points, small as it may at first appear, is that the muscles round the eyes are involuntarily contracted during violent expiratory efforts, in order to protect these delicate organs from the pressure of the blood. This fact, which has been fully investigated for me with the greatest kindness by Professors Donders of Utrecht, throws, as we shall hereafter see, a flood of light on several of the most important expressions of the human countenance. The merits of Sir C. Bell's work have been undervalued or quite ignored by several foreign writers, but have been fully admitted by some, for instance by M. Lemoine, [5] who with great justice says:—Le livre de Ch. Bell devrait etre medite par quiconque essaye de faire parler le visage de l'homme, par les philosophes aussi bien que par les artistes, car, sous une apparence plus legere et sous le pretexte de l'esthetique, c'est un des plus beaux monuments de la science des rapports du physique et du moral.

The Social Nature of Emotion Expression Ursula Hess, Shlomo Hareli, 2019-12-12 This book provides an overview of theoretical thinking about the communicative scope of emotional expressions as well as an overview of the state of the art research in emotional psychology. For many years, research in emotional psychology has been primarily concerned with the labeling of emotion expressions and the link between emotion expressions and the expresser's internal state. Following recent trends in research devoting specific attention to the social signal value of emotions, contributors emphasize the nature of emotion expressions as information about the person and the situation, including the social norms and standards relevant to the situation. Focusing on the role of emotion expressions as communicative acts, this timely book seeks to advance a line of theoretical thinking that goes beyond the view of emotion expressions as symptoms of an intrapersonal phenomenon to focus on their interpersonal function. The Social Nature of Emotion Expression will be of interest to researchers in emotional psychology, as well as specialists in nonverbal behavior, communication, linguistics, ethology and ethnography.

Watson, 2001-03-01 This volume examines expressions of such feelings as love, anger, and sadness, and highlights the individual and interpersonal processes that shape emotional behavior. It offers a lively and comprehensive discussion of the role of emotional expression and nonexpression in individual adaptation, social interaction, and therapeutic process. Drawing upon extensive theory and research, the authors provide coherent guidelines to help clinicians, researchers, and students identify, conceptualize, and treat problems in emotional behavior. This guide is an important resource for teachers, students, and researchers of clinical, counseling, social, personality, and health psychology, as well as practicing counselors and psychotherapists. It will also serve as a text in advanced undergraduate and graduate-level courses on emotion and interpersonal communication, and in graduate-level counseling and psychotherapy seminars.

Human Facial Expression Alan J. Fridlund, 2014-03-27 This unique book provides an integrated view of human facial expressions based on contemporary knowledge about the evolution of signaling across the animal kingdom. Spanning fields that range from psychology and neurology to anthropology and linguistics, it reopens and discusses some of the classic questions in the field, including: What do facial expressions express? What are the relations between facial expressions and our motives and emotions? How did our facial expressions evolve? Are there really innate and universal facial expressions? *Human Facial Expression* is suitable for graduate and advanced undergraduate use as a text or course supplement. Chapters on the history of interpreting facial expressions, and on Darwin's contributions, set the stage for a thorough discussion of modern evolutionary theory and the biological, cultural, and developmental origins of our facial expressions. The incorporation of recent findings on the syntactics and semantics of animal signaling show the fundamental link of human facial expressions to vocalization and language. Coverage includes methodology in evolutionary research Introductory discussion of facial nerves and muscles Compares and contrasts emotion vs. behavioral ecology views of facial expressions Cross-cultural analysis of similarities and differences in facial expressions Reviews paralanguage and gesture

The Language of Emotions ... Niemeier-Dirven, René Dirven, 1997-01-01 Since the celebration of the 100th anniversary of Darwin's *The Expression of the Emotions in Man and Animals* (1872), emotionology has become a respectable and even thriving research

domain again. The domain of human emotions is most important for mankind, emotions being right in the center of our daily lives and interests. A key-role in the interdisciplinary scientific debate about emotions has now been accorded to the study of the language of emotions. The present volume offers a new approach to the study of the language of emotions insofar as it presents theories from very different perspectives. It encompasses studies by scholars from diverse disciplines such as linguistics, sociology, and psychology. The topics of the contributions also cover a range of special fields of interest in four major sections. In a first section, a discussion of theoretical issues in the analysis of emotions is presented. The conceptualization of emotions in specific cultures is analyzed in section 2. Section 3 takes a different inroad into the language of emotions by looking at developmental approaches giving evidence of the fact that the acquisition of the language of emotions is a social achievement that simultaneously determines our experience of these emotions. Section 4 is devoted to emotional language in action, that is, the contributions focus upon different types of texts and analyze how emotions are referred to and expressed in discourse.

Art's Emotions Damien Freeman, 2014-09-03 Despite the very obvious differences between looking at Manet's *Woman with a Parrot* and listening to Elgar's *Cello Concerto*, both experiences provoke similar questions in the thoughtful aesthete: why does the painting seem to express reverie and the music, nostalgia? How do we experience the reverie and nostalgia in such works of art? Why do we find these experiences rewarding in similar ways? As our awareness of emotion in art, and our engagement with art's emotions, can make such a special contribution to our life, it is timely for a philosopher to seek to account for the nature and significance of the experience of art's emotions. Damien Freeman develops a new theory of emotion that is suitable for resolving key questions in aesthetics. He then reviews and evaluates three existing approaches to artistic expression, and proposes a new approach to the emotional experience of art that draws on the strengths of the existing approaches. Finally, he seeks to establish the ethical significance of this emotional experience of art for human flourishing. Freeman challenges the reader not only to consider how art engages with emotion, but how we should connect up our answers to questions concerning the nature and value of the experiences offered by works of art.

Emotions of Animals and Humans Shigeru Watanabe, Stan Kuczaj, 2012-08-31 This book takes a multidisciplinary approach to emotion, with contributions from biologists, psychologists, neuroscientists, robot engineers, and artists. A wide range of emotional

phenomena is discussed, including the notion that humans' sophisticated sensibility, as evidenced by our aesthetic appreciation of the arts, is based at least in part on a basic emotional sensibility that is found in young children and perhaps even some non-human animal species. As a result, this book comprises a unique comparative perspective on the study of emotion. A number of chapters consider emotions in a variety of animal groups, including fish, birds, and mammals. Other chapters expand the scope of the book to humans and robots. Specific topics covered in these chapters run the gamut from lower-level emotional activity, such as emotional expression, to higher-level emotional activity, such as altruism, love, and aesthetics. Taken as a whole, the book presents manifold perspectives on emotion and provides a solid foundation for future multidisciplinary research on the nature of emotions.

The Expression of the Emotions in Man and Animals Charles Darwin, 2020-12-26 The Expression of the Emotions in Man and Animals by Charles Darwin The expression of emotions in man and animals is the third major work in the evolutionary theory of Charles Darwin, after the origin of species (1859) and The origin of man (1871). Initially conceived as a chapter in The Descent of Man, The Expression grew in length and was published separately in 1872. This book deals with the biological aspects of emotional life, and Darwin explores the animal origins of human characteristics such as the rising of the eyebrows in moments of surprise and mental confusion that typically accompanies blush. A German translation of The Expression appeared in 1872; The Dutch and French versions followed in 1873 and 1874. A second edition of the book, with only minor modifications, was published in 1890. Since its first publication, The Expression has never been out of print, but has also been described as Darwin's masterpiece. forgotten . Before Darwin, human emotional life had posed problems for the Western philosophical categories of mind and body. Darwin's interest dates back to his time as a medical student and Sir Charles Bell's 1824 edition of Anatomy and Philosophy of Expression, which advocated a spiritual dimension to the subject. In contrast, Darwin's biological approach links emotions to their origins in animal behavior and allows cultural factors to play only an auxiliary role in shaping expression. This biological emphasis leads to a concentration on six emotional states: happiness, sadness, fear, anger, surprise, and disgust. It also leads to an appreciation of the universal character of the expression, with its implication of a single origin for the entire human species; and Darwin points out the importance of emotional communication with children in their psychological development. Darwin sought the opinions of some of the leading British psychiatrists, notably James Crichton-Browne, in preparing the book which constitutes his main contribution to psychology. Among the innovations of this book is the distribution of a questionnaire by Darwin (probably inspired by his cousin, Francis Galton) during his preparatory research; simple psychology experiments on emotion recognition with his friends and family; and (borrowing from Duchenne de Boulogne, physician de la Salpêtrière) the use of photography in his presentation of scientific information. Publisher John Murray warned Darwin that including the photographs would put a hole in the profit of the book, and Expression of Emotions is an important milestone in the history of book illustration.

Darwin and Facial Expression Paul Ekman, 2006 In Darwin and Facial Expression, Paul Ekman and a cast of other notable scholars and scientists, reconsider the central concepts and key sources of information in Darwin's work on emotional expression. First published in 1972 to celebrate the centennial of the publication of Darwin's, The Expression of the Emotions in Man and Animals, it is the first of three works edited by Dr. Ekman and others on the subject. This Malor edition contains new and updated references. Darwin claimed that we cannot understand human emotional expression without understanding the emotional expressions of animals, as our emotional expressions are in large part determined by our evolution. Not only are there similarities in the appearance of some

emotional expressions between man and certain other animals, but the principles which explain why a particular emotional expression occurs with a particular emotion also apply across species. Paul Ekman is co-author of *Unmasking the Face* (Malor Books, 2003) and more than thirteen other titles. He is professor emeritus of psychology in the department of psychiatry at the University of California Medical School, San Francisco and a frequent consultant on emotional expression to the FBI, the CIA, the ATF, as well as the animation studios Pixar and Industrial Light and Magic.
