The end of medicine as we know it - and why your health has a future Harald H.H.W. Schmidt,2022-05-03 Medicine itself is sick. We hardly understand any disease and therefore need to chronically treat symptoms but not the causes. Consequently, drugs and other therapies help only very few patients; yet we are pumping more and more money into our healthcare system without any added value.Thus, the internationally renowned physician researcher, Harald Schmidt, predicts the end of medicine as we know it. On a positive note, digitization will radically change healthcare and lead to one of the greatest socioeconomic revolutions of mankind. He is one of the pioneers of systems medicine, a complete redefinition of what we actually call a disease, how we organize medicine and how we use Big Data to heal rather than treat, to prevent rather than cure. In this book the author first proves the deep crisis of medicine, but describes how medicine will become more precise, more uniform, safer and, surprisingly, also more affordable. Making a diagnosis will be taken over by artificial intelligence. Current, mainly organ-based medical specialists, disciplines and hospital departments will disappear. Physicians will become patient coaches working in interdisciplinary teams with pharmacists, physiotherapists, nutritionists, etc. and relieved of their workload. Illnesses, including cancer, will be prevented or cured in a precise manner. We will become 100 years and older. Health care spending will shift from chronic treatment of diseases to prevention and health maintenance, thereby dramatically reducing overall costs. Health will become a common good. But Harald Schmidt also warns that those who are not open to digitization will not benefit from these advances and will be left behind. Anyone who wants to benefit from the revolution of medicine must have a digital twin. Is this futurism? No, each of us can have his or her personal genome sequenced, microbiome analyzed, keep an electronic health record. The future has begun. Schmidt convincingly explains the limitations in the current practice of medicine and the need for big data and a systems approach. Prof. Ferid Murad MD, PhD, Nobel Laureate in Medicine 1998, USA Network Medicine, a new discipline that offers a network-based understanding of the cell and disease, is unavoidable if we wish to translate the advances in genomics into cures. Professor Harald Schmidt, a prominent expert in this space, offers the first coherent treatment of the topic, explaining the potential of a network-based perspective of human disease. Prof. Albert-László Barabási, Northeastern University and Harvard Medical School, Boston, USA Visionary, provocative, and full of insights. Professor Schmidt gives a unique and authoritative perspective to the past, present and future of medical science and clinical practice. And all presented in such an inimitable style. Prof. Robert F.W. Moulds, MBBS PhD FRACP, Former Dean Royal Melbourne Hospital Clinical School, Australia

Maker Literacy Lynn Pawloski,Cindy Wall,2016-11-07 This book takes the creativity and inventiveness of the maker movement and applies that energy in a new way to help children learn across all subject areas as well as broaden their world view. Traditional library literacy programs have helped many children foster a love of reading, but to prepare this next generation of learners, this programming needs to be modified to include technology. The inherent creativity and inventiveness of the Maker Movement, embracing both classic and innovative technological activities, provides the perfect bridge to invigorate, expand, and update these programs. This alternative to conventional library literacy programming will help children learn throughout all subject areas, see additional possibilities, and make connections in the world around them. With this guide, readers can discover how to apply maker literacy to introduce connections that help children better understand that their experiences in life are interrelated—that art can be made on a 3D printer and that science and technology are an essential part of design. This holistic approach provides a myriad of creative opportunities for both teaching staff and the children they serve. A great resource for youth services librarians in public libraries, this guide to infusing library programs with technology and maker activities to motivate learning will also appeal to preschool and elementary librarians, educators, and parents.
