

The Weather Channel

Mark Cantrell

The Weather Channel Frank Batten,2002 Told by one of the key figures in the network's success, former Chairman and CEO Frank Batten, this is at once a deeply personal account of high-stakes entrepreneurship and a fascinating case study of a media business both experiencing and driving major change.--BOOK JACKET.

Frank Batten Connie M. Sage,2011-08-29 Frank Batten Sr. (1927–2009) created the Weather Channel in 1982, despite mocking by colleagues in the media that around-the-clock weather broadcasts would be as exciting as watching paint dry. The network, and later its companion website, Weather.com, became the largest private weather company in the world and an American cultural icon. Yet few have heard of Batten, a media pioneer whose Virginia newspaper was the only major daily to back school integration. At a time when American corporate greed was making headlines, without fanfare and limelight Batten built a media empire centered on honesty, integrity, and ethics. Starting out in his uncle's newspaper business in Norfolk, Virginia, as a reporter and advertising salesman, he assumed leadership of the Virginian-Pilot and Ledger-Star at the age of twenty-seven and grew Landmark Communications into a media powerhouse. He championed racial equality, a position not often taken in Virginia during the 1950s. His flagship newspaper, the Pilot, was the only daily paper in Virginia to back court-ordered school desegregation. He created two billion-dollar businesses and gave away more than \$400 million to charity, nearly all of it to education. As chairman of the Associated Press from 1982 to 1987, he helped guide the news agency back on a sound financial footing. Batten also faced a tremendous personal challenge that would have sidelined many: he lost his vocal cords to cancer two years before starting the Weather Channel. This is the untold story of a man whose name few recognize, yet who helped change the face of the media in the twentieth century.

Braving the Elements David Laskin, 1997-06-16 Nowhere in the world is weather as volatile and powerful as it is in North America. Scorching heat in the Southwest, hurricanes on the Atlantic coast, tornadoes in the Plains, blizzards in the mountains: Every area of the country has vastly different weather, and vastly different cultures as a result. *Braving the Elements* is David Laskin's delightful and fascinating history of how our unique weather has shaped a nation, and how we've tried to cope with it over centuries. Since before Columbus, the peoples of America have struggled to make sense of the capricious and violent nature of America's weather. Anasazi Indians used the rain dance (and sometimes human sacrifice) to induce rain, while the Puritans in New England blamed the sins of the community for lightening strikes and Nor'easters. IN modern times we carry on those traditions by blaming the weatherman for ruined weekends. Despite hi-tech satellites and powerful computers and 24-hour-a-day forecasting from The Weather Channel, we're still at the mercy of the whims of Mother Nature. Laskin recounts the many dramatic moments in American weather history, from the Little Ice Age to Ben Franklin's invention of the lightning rod to the Great Blizzard of the 1930's to the worries about global warming. Packed with fresh insights and wonderful lore and trivia, *Braving the Elements* is unique and essential reading for anyone who's ever asked, What's it like outside?

Tornadoes! Sally Rose, 1999 Discusses the nature and origins of tornadoes, where they occur, and how to prepare for one, as well as particularly bad ones in the past.

Meteorology Karen Bush Gibson, 2017-08-15 Does the weather fascinate you? Thunderstorms, tornados, hurricanes, and snowstorms are just some of the weather events that affect people's everyday lives. Since the time of the Ancient Greeks, people have been fascinated with weather phenomena and how they relate to human activities, such as sailing and farming. Meteorology is the science of the atmosphere, particularly the processes and phenomena that are used in forecasting the weather, and how weather relates to the oceans and climate. Long-term climate patterns, such as El Niño, don't just affect weather. They disrupt global atmospheric circulation, ocean currents, and the economies of many countries. Every day, thousands of meteorologists observe and record measurements at more than 10,000 weather stations on land and sea throughout the world. Data also comes from satellites, weather balloons, and radar. This data is transmitted to weather centers of the world, where computer models produce the information used in weather prediction. *Meteorology: Cool Women Who Weather Storms* introduces readers ages 9 to 12 to three women in meteorology who are making an impact and inspiring future generations of meteorologists. Kelly Cass is a broadcast meteorologist at the Weather Channel with a particular interest in severe weather. Bianca Hernandez works as a meteorologist for the National Weather Service in their Phoenix office. Pam Heinselman is a professor and Research Scientist with the National Severe Storms Lab. This nonfiction STEM title serves as a bridge between girls' interests and their potential careers in meteorology by telling captivating stories about real-life meteorologists and the many ways meteorology benefits society. Meteorology isn't just about storm tracking, it's about how the atmosphere affects the earth in the past, present, and future. Advances in meteorology are strongly connected with developments in science, technology, engineering, and mathematics. Readers will be encouraged to investigate how atmospheric forces affect our lives and how using scientific and mathematical principles allow meteorologists to predict the weather and save lives.

Wyoming Trucks, True Love, and the Weather Channel Jeffe Kennedy, 2004 These essays explore the challenges Jeffe Kennedy has faced as a woman, a Westerner, a father-less daughter, a stepmother, a biologist, and a girl with hair of no specific color. From the book's opening in a cornfield, where Kennedy is searching for the twenty-five-year-old site of the plane crash that killed her father, she seems to be in constant motion. She is the feminist adolescent, ashamed to win a prize in home economics who learns to take joy in her pastry skills. She is the scientist struggling with mortality, the liberal learning to shoot a gun. With cheeky wisdom, Jeffe Kennedy explores the extraordinary moments that transform ordinary lives. No revelation--from the meaning of the death of a parent to being a blonde--is too big or small for this Colorado-born biologist to dissect. Her insights tell us a lot about the way lives enhanced by real convictions are formed.--Vicki Lindner, author of *Outlaw Games* [Kennedy] writes vividly and with great clarity. Her sensitivity and empathy for other people enhances an unusually authentic ability to establish three-dimensional characterization.--Lee Gutkind, editor, *Creative Nonfiction*

The Weather in the Imagination Lucian Boia,2005 The weather has always been a topic of conversation; it is probably the most common dialogue between human beings. We often fear the weather, yet our apparent dread of it is puzzling, since we generally adapt to it remarkably well. *The Weather in the Imagination* investigates the theories, scenarios and psychoses caused by climate. These fall into three main categories: anthropological and psychological; historical; and catastrophic. The weather has long served as a means of explaining human diversity: other people are different because they live under different skies. Climate has also been used to explain the dynamic of the historical process, the rise of certain civilizations and the stagnation and regression of others. Catastrophe is also invoked in theories of the weather: what could destroy a civilization - or arouse the fear of humanity's total extinction - more effectively than a climatic disaster? The prototype of this kind of upheaval is the pre-biblical Flood, one of the most gripping and influential myths the human imagination has ever produced. Lucian Boia does not take sides in the current debates about climate; he does not exaggerate or play down global warming and its consequences, or try to forecast the weather of the future. What he does tell is a story that runs parallel with the 'true' story of climate and its future: the story of a human imagination that has been stimulated, baffled, infuriated and, from time to time, terrified by the weather. -- Blackwells.

Mighty Storms of New England Eric P. Fisher,2021-10-21 The New England landscape has long been battered by some of the most intense weather in the United States. The region breeds one of the highest concentrations of meteorologists in the country for a reason. One can experience just about anything except a dust storm. Snowstorms, floods, droughts, heat waves, arctic blasts, hurricanes, tornadoes, wildfires, and other atmospheric oddities come and go with the changing seasons. Rare is the boring year of weather. Knowing the past is a critical part of understanding and forecasting the weather. Meteorologist Eric Fisher takes an in depth look at some of the most intense weather events in New England's history. The stories in this book not only describe the loss and the damage caused by the storms, but also how nearly all of them left such an impression that they immediately led to progress where new warnings systems were implemented, government agencies formed, and technology accelerated in response to the devastation these events left behind.
