Best Practices in Business Technology Management Stephen J. Andriole,2008-09-26 Despite the exponential growth of computing and communications technology, the inertia of old business technology management practices still drives most investment decisions in this area. Companies spend too much money on new technology, while their business models and processes underutilize the resources they already have. Written in a compelling, conversational manner, Best Practices in Business Technology Management advises those who buy, install, and support all types of computing and communications technology, empowering them to optimize their systems in new and innovative ways. Divided into six chapters, the book provides insight into the field, discussing decision-making, trends, alignment, optimization, processes, timing, and other areas. It includes practical hands-on advice that explores organization, the challenges of working with people, acquisition and measurement of technology, operational effectiveness, and strategic effectiveness. The best practices presented are not theoretical or untested. Rather, they are the result of trench warfare and real applications. The insights contained in this volume represent what successful companies have done—and continue to do—to optimize the business technology relationship. A nationally-known business technology veteran, author Stephen J. Andriole has developed a perspective on the optimization of computing and communications technology based on years of experience from government, industry, academia, and the venture capital business. In this book, he demonstrates how those who buy and deploy technology can optimize their technology in a way that saves costs and provides maximum performance.

Information Systems Development Marite Kirikova,Janis Grundspenkis,Wita Wojtkowski,W. Gregory Wojtkowski,Stanislaw Wrycza,Joze Zupancic,2012-12-06 This book is the result of the 11 th International Conference on Information Systems Development -Methods and Tools, Theory and Practice, held in Riga, Latvia, September 12-14,2002. The purpose of this conference was to address issues facing academia and industry when specifying, developing, managing, reengineering and improving information systems. Recently many new concepts and approaches have emerged in the Information Systems Development (ISD) field. Various theories, methodologies, methods and tools available to system developers also created new problems, such as choosing the most effective approach for a specific task, or solving problems of advanced technology integration into information systems. This conference provides a meeting place for ISD researchers and practitioners from Eastern and Western Europe as well as from other parts of the world. Main objectives of this conference are to share scientific knowledge and interests and to establish strong professional ties among the participants. The 11th International Conference on Information Systems Development (ISD'02) continues the tradition started with the first Polish-Scandinavian Seminar on Current Trends in Information Systems Development Methodologies, held in Gdansk, Poland in 1988. Through the years this Seminar has evolved into the International Conference on Information Systems Development. ISD'02 is the first ISD conference held in Eastern Europe, namely, in Latvia, one of the three Baltic countries.

Technology Business Management Todd Tucker,2016-09-08 For many CIOs, the value they deliver is elusive. It's not that they do not create positive business outcomes, it's that they have a hard time demonstrating value for the money spent. As a result, many IT leaders find themselves trapped in a vicious cycle of defending their budgets, cutting resources when times are tight, and struggling to keep pace with an insatiable business appetite for innovation. Meanwhile, business leaders increasingly rely on the cloud and other third parties for their technology needs, finding clear tradeoffs between cost, features, risk, and speed of delivery at their fingertips. CIOs must not only compete with these alternatives, they must embrace the new reality of a multi-sourced, service-oriented world. Many IT

leaders are taking a more proactive approach to optimizing value. By using shared facts about cost, consumption, quality, risk and performance, hundreds of CIOs have empowered value conversations centered on cost-for-performance, business-aligned portfolios, investments in innovation and enterprise agility. The tradeoffs they've illuminated changed the tone of their meetings and instilled a business mindset in IT decisions. By reading this book, you'll discover and learn the following: - A practical, applied framework -- called Technology Business Management -- for creating and using shared facts to make better decisions about people, technologies, services and investments - A standard taxonomy of resources, technologies and services for CIOs to translate between IT, financial, and business perspectives - Creating transparency to empower decision makers, demonstrate cost-efficiency, shape demand and plan in step with the business - What your technology business model says about the value you deliver and the disciplines you employ - How to shift from project portfolio management to service portfolio management to both improve alignment and adopt more agile approaches to innovation and development - How to optimize run-the-business spending by optimizing infrastructure, outsources, labor and services and rationalizing your portfolios for better alignment - How to improve your ability to change the business by better governing innovation investments and improving enterprise agility - How to create and execute a roadmap for improving data and decision making capabilities over time while reaping rewards at every stage of maturity
