Advances in Soft Computing Rajkumar Roy,Takeshi Furuhashi,Pravir K. Chawdhry,2012-12-06 *Advances in Soft Computing* contains the most recent developments in the field of soft computing in engineering design and manufacture. The book comprises a selection of papers that were first presented in June 1998 at the 3rd On-line World Conference on Soft Computing in Engineering Design and Manufacturing. Amongst these are four invited papers by World-renowned researchers in the field. Soft computing is a collection of methodologies which aim to exploit tolerance for imprecision, uncertainty and partial truth to achieve tractability, robustness and low solution cost. The area of applications of soft computing is extensive. Principally the constituents of soft computing are: fuzzy computing, neuro-computing, genetic computing and probabilistic computing. The topics in this book are well focused on engineering design and manufacturing. This broad collection of 43 research papers, has been arranged into nine parts by the editors. These include: Design Support Systems, Intelligent Control, Data Mining and New Topics in EA basics. The papers on evolutionary design and optimisation are of particular interest. Innovative techniques are explored and the reader is introduced to new, highly advanced research results. The editors present a unique collection of papers that provide a comprehensive overview of current developments in soft computing research around the world.

*Evolutionary Computation for Modeling and Optimization* Daniel Ashlock,2005-12-15 Concentrates on developing intuition about evolutionary

computation and problem solving skills and tool sets. Lots of applications and test problems, including a biotechnology chapter.

**Reinforcement Learning** Richard S. Sutton, Andrew G. Barto, 1998-02-26 Richard Sutton and Andrew Barto provide a clear and simple account of the key ideas and algorithms of reinforcement learning. Their discussion ranges from the history of the field's intellectual foundations to the most recent developments and applications. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives when interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the key ideas and algorithms of reinforcement learning. Their discussion ranges from the history of the field's intellectual foundations to the most recent developments and applications. The only necessary mathematical background is familiarity with elementary concepts of probability. The book is divided into three parts. Part I defines the reinforcement learning problem in terms of Markov decision processes. Part II provides basic solution methods: dynamic programming, Monte Carlo methods, and temporal-difference learning. Part III presents a unified view of the solution methods and incorporates artificial neural networks, eligibility traces, and planning; the two final chapters present case studies and consider the future of reinforcement learning.

**Graph Theory and Its Applications** Jonathan L. Gross, Jay Yellen, 2005-09-22 Already an international bestseller, with the release of this greatly enhanced second edition, Graph Theory and Its Applications is now an even better choice as a textbook for a variety of courses -- a textbook that will continue to serve your students as a reference for years to come. The superior explanations, broad coverage, and abundance

**Cognitive Dimensions of Social Science** Mark Turner, 2003-03-27 What will be the future of social science? Where exactly do we stand, and where do we go from here? What kinds of problems should we be addressing, with what kinds of approaches and arguments? In Cognitive Dimensions of Social Science, Mark Turner offers an answer to these pressing questions: social science is headed toward convergence with cognitive science. Together they will give us a new and better approach to the study of what human beings are, what human beings do, what kind of mind they have, and how that mind developed over the history of the species. Turner, one of the originators of the cognitive scientific theory of conceptual integration, here explores how the application of that theory enriches the social scientific study of meaning, culture, identity, reason, choice, judgment, decision, innovation, and invention. About fifty thousand years ago, humans made a spectacular advance: they became cognitively modern. This development made possible the invention of the vast range of knowledge, practices, and institutions that social scientists try to explain. For Turner, the anchor of all social science - anthropology, political science, sociology, economics - must be the study of the cognitively modern human mind. In this book, Turner moves the study of those extraordinary mental powers to the center of social scientific research and analysis.

**The Selfish Gene** Richard Dawkins, 1989 Science need not be dull and bogged down by jargon, as Richard Dawkins proves in this entertaining look at evolution. The themes he takes up are the concepts of altruistic and selfish behaviour; the genetical definition of selfish interest; the evolution of aggressive behaviour; kinship theory; sex ratio theory; reciprocal altruism; deceit; and the natural selection of sex differences. 'Should be read, can be read by almost anyone. It describes with great skill a new face of the theory of evolution.' W.D. Hamilton, Science

**Advances in Computational Intelligence** Fei-Yue Wang, Derong Liu, 2006 Computational Intelligence (CI) is a recently emerging area in fundamental and applied research, exploiting a number of advanced information processing technologies that mainly embody neural networks, fuzzy logic and evolutionary computation. With a major concern to exploiting the tolerance for imperfection, uncertainty, and partial truth to achieve tractability, robustness and low solution cost, it becomes evident that composing methods of CI should be working concurrently rather than separately. It is this conviction that research on the synergism of CI paradigms has experienced significant growth in the last decade with some areas

nearing maturity while many others remaining unresolved. This book systematically summarizes the latest findings and sheds light on the respective fields that might lead to future breakthroughs. Contents: A Quest for Granular Computing and Logic Processing (W Pedrycz); Abstraction and Linguistic Analysis of Conventional Numerical Dynamic Systems (F-Y Wang); Slicing: A Distributed Learning Approach (S A Eschrich & L O Hall); Marginal Learning Algorithms in Statistical Machine Learning (Q Tao & J Wang); Constraint Handling in Genetic Algorithm for Optimization (G G Yen); Hybrid PSO-EA Algorithm for Training Feedforward and Recurrent Neural Networks for Challenging Problems (X Cai et al.); Modular Wavelet-Fuzzy Networks (Y Lin & F-Y Wang); Ant Colony Algorithms: The State-of-the-Art (J Zhang et al.); Motif Discoveries in DNA and Protein Sequences Using Self-Organizing Neural Networks (D Liu & X Xiong); Computational Complexities of Combinatorial Problems with Applications to Reverse Engineering of Biological Networks (P Berman et al.); Advances in Fingerprint Recognition Algorithms with Application (J Tian et al.); Adaptation and Predictive Control Observed in Neuromuscular Control Systems (J He); Robust Adaptive Approximation Based Backstepping via Localized Adaptive Bounding (Y Zhao & J A Farrell); Dynamically Connected Fuzzy Single Input Rule Modules and Application to Underactuated Systems (J Yi et al.). Readership: Researchers, graduate and senior level undergraduate students in electrical & electronic engineering, computer engineering, neural networks, fuzzy logic and artificial intelligence.

*The Most Important Scientific Discovery of All Time And the Scientific Revolution Going on Right Now*, Ed McGrath, 2011-11 A basic claim of this book is that modern science has found us humans to be much less smart and rational than we have throughout our long history led ourselves to believe we are. Because of this important difference, we humans are much more likely than we think to cause our own nuclear extinction in the near future. Although Ed McGrath has been a college graduate and interested in science most of his life, he majored in other subjects until he decided to become a psychology professor in his early forties. He returned to California State University in Los Angeles and achieved perfect grades in experimental psychology as an undergraduate and for his master's degree. He then successfully fulfilled the course requirements for a Ph.D. at the University of California. Discovering that human psychology was not based on much evidence, he also attended anthropology lectures on human evolution, hoping to find improvement potential for psychology. However, one professor warned Ed that he and the five professors on Ed's Ph.D. research committee did not like Ed's reputation for questioning the lack of testable evidence in classes and seminars, and eventually dismissed him from the Ph.D. program. Although Ed was initially disappointed, he found time to inquire into other related modern scientific discoveries. He began to see new and more important relationships among some of these discoveries and his own beliefs. That set of related discoveries eventually became an important component of this book. About the Author: Ed McGrath is a retired property tax expert, assessor and realtor. Originally from New York City, he now lives near Pasadena, California. *Biker Billy's Hog Wild on a Harley Cookbook* Bill Hufnagle, 2003-03-12 Cook up delicious dishes all day long with these recipes collected from Harley enthusiasts across America. Harley-Davidson riders are a close-knit community that loves good food. The official motto of Harley riders may be "Live to Ride, Ride to Live," but the unofficial motto is "Eat to Ride, Ride to Eat." To help celebrate the 100th anniversary of Harley-Davidson in 2003, Bill Hufnagle, aka Biker Billy, collected 200 righteous recipes from HOG (Harley Owners Group) members and other Harley enthusiasts from sea to shining sea whose close-second passion is a fantastic, stick-to-your-ribs meal with no holds barred. There are plenty of Billy's own favorites included, too. Here and only here are recipes for Nana's Famous Horseradish Cheese Spread, Grandpa's Oil Can Stew, Penne with Crankcase Vodka Sauce, Black Leather Tostadas, and John's Prison Break Cake. This is torqued-up-tasty food from a bunch of adventure-loving riders that's certain to appeal to the more than five million Harley riders across the U.S.A. Praise for Biker Billy's Hog Wild on a Harley Cookbook "Whether you're going cross-country on a Harley or a few blocks on a crosstown bus, Biker Billy takes you on a wild and hilarious road trip. These are the hottest recipes that this Wayne Harley has ever tested." —Wayne Harley Brachman, author of *Retro Desserts* and host of the Food Network's *Melting Pot* "Biker Billy has once again cooked up a fragrant collection of tales and recipes from the open road. All we need now is some tinfoil and a hot motor, and zesty meals will be served." —J. Joshua Placa, editor of *Cruising Rider* "Despite the title's appeal to a niche audience, Hufnagle has plenty of attractive recipes for all appetites to relish." —Booklist

*The Culture of Digital Fighting Games* Todd Harper, 2013-11-26 This book examines the complex network of influences that collide in the culture of digital fighting games. Players from all over the world engage in competitive combat with one another, forming communities in both real and virtual spaces, attending tournaments and battling online via internet-connected home game consoles. But what is the logic behind their shared playstyle and culture? What are the threads that tie them together, and how does this inform our understanding of competitive gaming, community, and identity? Informed by observations made at one of the biggest fighting game events in the world – the Evolution Series tournament, or EVO – and interviews with fighting game players themselves, this book covers everything from the influence of arcade spaces, to the place of gender and

ethnicity in the community, to the clash of philosophies over how these games should be played in the first place. In the process, it establishes the role of technology, gameplay, and community in how these players define both themselves and the games that they play.

Blondie24 David B. Fogel,2002 This book explains how a computer, by replicating the processes of Darwinian evolution, taught itself to play checkers far better than its creators could have programmed it to play. Fogel (editor, IEEE Transactions on Evolutionary Computation) considers the implications for evolutionary computations and artificial intelligence. Diagrams illustrate the evolutionary and computational processes at work, and the course of various games of checkers. Annotation copyrighted by Book News, Inc., Portland, OR.
