**Video Game Spaces** Michael Nitsche, 2008-12-05 An exploration of how we see, use, and make sense of modern video game worlds. The move to 3D graphics represents a dramatic artistic and technical development in the history of video games that suggests an overall transformation of games as media. The experience of space has become a key element of how we understand games and how we play them. In *Video Game Spaces*, Michael Nitsche investigates what this shift means for video game design and analysis. Navigable 3D spaces allow us to crawl, jump, fly, or even teleport through fictional worlds that come to life in our imagination. We encounter these spaces through a combination of perception and interaction. Drawing on concepts from literary studies, architecture, and cinema, Nitsche argues that game spaces can evoke narratives because the player is interpreting them in order to engage with them. Consequently, Nitsche approaches game spaces not as pure visual spectacles but as meaningful virtual locations. His argument investigates what structures are at work in these locations, proceeds to an in-depth analysis of the audiovisual presentation of

gameworlds, and ultimately explores how we use and comprehend their functionality. Nitsche introduces five analytical layers—rule-based space, mediated space, fictional space, play space, and social space—and uses them in the analyses of games that range from early classics to recent titles. He revisits current topics in game research, including narrative, rules, and play, from this new perspective. Video Game Spaces provides a range of necessary arguments and tools for media scholars, designers, and game researchers with an interest in 3D game worlds and the new challenges they pose.

**Discard Studies** Max Liboiron,Josh Lepawsky,2022-05-24 An argument that social, political, and economic systems maintain power by discarding certain people, places, and things. Discard studies is an emerging field that looks at waste and wasting broadly construed. Rather than focusing on waste and trash as the primary objects of study, discard studies looks at wider systems of waste and wasting to explore how some materials, practices, regions, and people are valued or devalued, becoming dominant or disposable. In this book, Max Liboiron and Josh Lepawsky argue that social, political, and economic systems maintain power by discarding certain people, places, and things. They show how the theories and methods of discard studies can be applied in a variety of cases, many of which do not involve waste, trash, or pollution. Liboiron and Lepawsky consider the partiality of knowledge and offer a theory of scale, exploring the myth that most waste is municipal solid waste produced by consumers; discuss peripheries, centers, and power, using content moderation as an example of how dominant systems find ways to discard; and use theories of difference to show that universalism, stereotypes, and inclusion all have politics of discard and even purification—as exemplified in “inclusive” efforts to broaden the Black Lives Matter movement. Finally, they develop a theory of change by considering “wasting well,” outlining techniques, methods, and propositions for a justice-oriented discard studies that keeps power in view.
