Proceedings of the Ninth International Conference on Management Science and Engineering Management Jiuping Xu, Stefan Nickel, Virgilio Cruz Machado, Asaf Hajiye, 2015-05-20 This is the Proceedings of the Ninth International Conference on Management Science and Engineering Management (ICMSEM) held from July 21-23, 2015 at Karlsruhe, Germany. The goals of the conference are to foster international research collaborations in Management Science and Engineering Management as well as to provide a forum to present current findings. These proceedings cover various areas in management science and engineering management. It focuses on the identification of management science problems in engineering and innovatively using management theory and methods to solve engineering problems effectively. It also establishes a new management theory and methods based on experience of new management issues in engineering. Readers interested in the fields of management science and engineering management will benefit from the latest cutting-edge innovations and research advances presented in these proceedings and will find new ideas and research directions. A total number of 132 papers from 15 countries are selected for the proceedings by the conference scientific committee through rigorous referee review. The selected papers in the first volume are focused on Intelligent System and Management Science covering areas of Intelligent Systems, Logistics Engineering, Information Technology and Risk Management. The selected papers in the second volume are focused on Computing and Engineering Management covering areas of Computing Methodology, Project Management, Industrial Engineering and Decision Making Systems.

The total of 1171 papers and 160 posters included in the 30 HCII 2018 proceedings volumes was carefully reviewed and selected from 4346 submissions. HCI 2018 includes a total of 145 papers; they were organized in topical sections named: Part I: HCI theories, methods and tools; perception and psychological issues in HCI; emotion and attention recognition; security, privacy and ethics in HCI. Part II: HCI in medicine; HCI for health and wellbeing; HCI in cultural heritage; HCI in complex environments; mobile and wearable HCI. Part III: input techniques and devices; speech-based interfaces and chatbots; gesture, motion and eye-tracking based interaction; games and gamification.

The Supermazes Robert Abbott, Bob Abbott, 1997 These baffling mind-benders take mazes in entirely new directions, with color codes and other special features that make solving them much more fun! The mazes range in difficulty

from one to five stars. There are hints to help you over the rough spots, and when all else fails, a full-blown solution section is available in the back. But there is more! With this book, you'll find out how to create your own challenging maze games. You'll also retrace the fascinating history of mazes, stretching from their mystical origins to the latest twists, like the Amazing Maize Maze--the largest ever built--that was carved out of a cornfield. This book offers virtual calisthenics for your brain! No one has been as creative as Bob in devising bizarre mazes that are unlike any you have seen before. --Martin Gardner, author and former Scientific American mathematical games columnist. About the Author Robert Abbott has published mazes in Mensa Bulletin and in Scientific American, Discover, and Games magazines. He is also the author of Mad Mazes and the inventor of Eleusis, a card game now listed in The Official Rules of Card Games and other standard books.

The Everything Kids' Mazes Book Beth L Blair, 2001-03-01 Get your pencils out and keep a pencil sharpener close by! The Everything Kids' Mazes Book is the most a-MAZEing collection of mazes you'll ever find. Once you start figuring out these incredible mazes, you won't be able to stop until you've finished them all. Can you unravel the mystery of the ancient tomb? Escape from a creepy monster lair? Or, maybe you're so good that you're ready to tackle these thrilling adventures: -Wind your way through an iceberg in the chilly Antarctic. -Pull a thread from one corner to the other of an Inca key textile design. -Find the wind current that will take your hot air balloon around the clouds and into clear sky. Almost anything could be a maze--the cluttered path from the door of your room to your bed, a tangle of your kid brother's shoelaces, even the braces on your sister's teeth! Once you get into this book you will see mazes everywhere!

When Sophie Thinks She Can't... Molly Bang, 2018-01-02 Three-time Caldecott Honor illustrator Molly Bang helps children solve problems by showing a different -- and highly effective -- approach: I can't do it becomes I can't do it... yet. When Sophie can't solve a math puzzle, she feels upset and inadequate. I CAN'T DO IT! she shouts, expressing the frustration all of us feel when we try and fail. Will she ever be smart like her sister? Maybe she isn't smart at all. Luckily Sophie's teacher steps in. What does it mean to be smart? Using current, popular mindset techniques, Sophie's class is taught that we get smarter when we exercise our brains, such as when we work harder at solving a puzzle. Struggling to solve a problem doesn't mean I can't do it! Sophie and her classmates just can't do it... yet! Readers will cheer when Sophie finally prevails, and at the end of the day, she's confident and optimistic. At home, Sophie uses her new technique to help her dad solve a carpentry puzzle. In this third book about Sophie, Molly Bang again helps children deal with a challenging everyday issue, providing an opening to ask: What do you do when you think, I can't!?

Make Space Scott Doorley, Scott Witthoft, Hasso Plattner Institute of Design at Stanford University, 2012-01-03 If you are determined to encourage creativity and provide a collaborative environment that will bring out the best in people, you will want this book by your side at all times. --Bill Moggridge, Director of the Smithsonian's Cooper-

Hewitt National Design Museum *Make Space* is an articulate account about the importance of space; how we think about it, build it and thrive in it. —James P. Hackett, President and CEO, Steelcase An inspiring guidebook filled with ways to alter space to fuel creative work and foster collaboration. Based on the work at the Stanford University d.school and its Environments Collaborative Initiative, *Make Space* is a tool that shows how space can be intentionally manipulated to ignite creativity. Appropriate for designers charged with creating new spaces or anyone interested in revamping an existing space, this guide offers novel and non-obvious strategies for changing surroundings specifically to enhance the ways in which teams and individuals communicate, work, play—and innovate. Inside are: Tools—tips on how to build everything from furniture, to wall treatments, and rigging Situations—scenarios, and layouts for sparking creative activities Insights—bite-sized lessons designed to shortcut your learning curve Space Studies—candid stories with lessons on creating spaces for making, learning, imagining, and connecting Design Template—a framework for understanding, planning, and building collaborative environments *Make Space* is a new and dynamic resource for activating creativity, communication and innovation across institutions, corporations, teams, and schools alike. Filled with tips and instructions that can be approached from a wide variety of angles, *Make Space* is a ready resource for empowering anyone to take control of an environment.

Computational Thinking Peter J. Denning, Matti Tedre, 2019-05-14 An introduction to computational thinking that traces a genealogy beginning centuries before the digital computer. A few decades into the digital era, scientists discovered that thinking in terms of computation made possible an entirely new way of organizing scientific investigation; eventually, every field had a computational branch: computational physics, computational biology, computational sociology. More recently, “computational thinking” has become part of the K-12 curriculum. But what is computational thinking? This volume in the MIT Press Essential Knowledge series offers an accessible overview, tracing a genealogy that begins centuries before digital computers and portraying computational thinking as pioneers of computing have described it. The authors explain that computational thinking (CT) is not a set of concepts for programming; it is a way of thinking that is honed through practice: the mental skills for designing computations to do jobs for us, and for explaining and interpreting the world as a complex of information processes. Mathematically trained experts (known as “computers”) who performed complex calculations as teams engaged in CT long before electronic computers. The authors identify six dimensions of today's highly developed CT—methods, machines, computing education, software engineering, computational science, and design—and cover each in a chapter. Along the way, they debunk inflated claims for CT and computation while making clear the power of CT in all its complexity and multiplicity.

Games of No Chance Richard J. Nowakowski, 1998-11-13 Is Nine-Men Morris, in the hands of perfect players, a win for white or for black – or a draw? Can king, rook, and knight always defeat king and two knights in chess? What can Go players learn from economists? What are nimbers, tinies, switches and minies? This book deals with combinatorial games, that is, games not involving chance or hidden information. Their study is at once old and young: though some games, such as chess, have been analyzed for centuries, the first full analysis of a nontrivial combinatorial game (Nim) only appeared in 1902. The first part of this book will be accessible to anyone, regardless of background: it contains introductory expositions, reports of unusual tournaments, and a fascinating article by John H. Conway on the possibly everlasting contest between an angel and a devil. For those who want to delve more deeply, the book also contains combinatorial studies of chess and Go; reports on computer advances such as the solution of Nine-Men Morris and Pentominoes; and theoretical approaches to such problems as games with many

players. If you have read and enjoyed Martin Gardner, or if you like to learn and analyze new games, this book is for you.

Pill City Kevin Deutsch, 2017-01-31 In 2015, Baltimore plunged into the worst American riots in recent history. In the chaos, two high school honor-roll students, "Brick" and "Wax," used their smarts, computer skills, ambition and gang connections to change the world of illegal drugs forever. With their gang associates, they looted pharmacies and robbed dealers, stealing over one million doses of prescription narcotics and heroin with a street value of more than \$100 million. "Brick" and "Wax" were not going to sell drugs on corners; they used location-based technology and encrypted messaging software to dispatch ordered drugs via delivery drivers—an Uber-like service that eliminated street deals and easily tapped phones. They were soon supplying cities along the East Coast, creating a whole new class of opioid addicts with the FBI and DEA trailing in their wake. To ensure their supply of drugs did not run out, the teens formed an alliance with members of the Sinaloa cartel, headed by El Chapo. Veteran Newsday crime reporter Kevin Deutsch has been reporting on the ground in drug-ravaged neighborhoods for over a year. He's seen the bodies. Across America, thousands are dying from opioid overdoses. This middle-class crisis has been well documented, but the inner cities, where families are being swallowed up by addiction, have been ignored. Deutsch brings us into this underworld, where social unrest and cutting-edge technology allow criminals to seed the next wave of dysfunction and despair.

The Tangram Book Jerry Slocum, Jack Botermans, Dieter Gebhardt, Monica Ma, Xiaohe Ma, Harold Raizer, Dic Sonneveld, 2004 A historical study on the ancient and popular Chinese puzzle game presents more than two thousand all-time tangrams, along with detailed instructions on how to arrange these intriguing puzzle tiles and presenting a variety of special puzzles for the reader to solve. Reprint.

The Beauty of Geometry H. S. M. Coxeter, Harold Scott Macdonald Coxeter, 1999-01-01 Absorbing essays demonstrate the charms of mathematics. Stimulating and thought-provoking treatment of geometry's crucial role in a wide range of mathematical applications, for students and mathematicians.

Making Java Groovy Kenneth Kousen, 2013-09-18 Summary Making Java Groovy is a practical handbook for developers who want to blend Groovy into their day-to-day work with Java. It starts by introducing the key differences between Java and Groovy—and how you can use them to your advantage. Then, it guides you step-by-step through realistic development challenges, from web applications to web services to desktop applications, and shows how Groovy makes them easier to put into production. About this Book You don't need the full force of Java when you're writing a build script, a simple system utility, or a lightweight web app—but that's where Groovy shines brightest. This elegant JVM-based dynamic language extends and simplifies Java so you can concentrate on the task at hand instead of managing minute details and unnecessary complexity. Making Java Groovy is a practical guide for developers who want to benefit from Groovy in their work with Java. It starts by introducing the key differences between Java and Groovy and how to use them to your advantage. Then, you'll focus on the situations you face every day, like consuming and creating RESTful web services, working with databases, and using the Spring framework. You'll also explore the great Groovy tools for build processes, testing, and deployment and learn how to write Groovy-based domain-specific languages that simplify Java development. Written for developers familiar with Java. No Groovy experience required. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. What's Inside Easier Java Closures, builders, and metaprogramming Gradle for builds, Spock for testing Groovy frameworks like Grails and Griffon About the Author Ken Kousen is an independent consultant and trainer specializing in Spring, Hibernate, Groovy, and Grails. Warhol-isms Andy Warhol, 2022-05-10 A unique collection of brilliant quotations from the legendary Pop artist One of the most influential artists of his time and ours, Andy Warhol is nearly as renowned for what he said as for what he did. Indeed, he is so quotable that things he never said are endlessly and plausibly attributed to him, including, fittingly, the most celebrated fake Warhol saying—"In the future, everyone will be world-famous for 15 minutes." Warhol-isms separates legend from fact to present a unique and comprehensive collection of authentic quotations from the Pop artist. Gathered from interviews and other primary sources, these deadpan, droll, ironic, and sincere gems—in which a superficial embrace of superficiality often disguises provocative, unconventional ideas—provide compelling insights into the life and work of an artist who has left an indelible mark on art and popular culture. Select quotations from the book: I think an artist is anybody who does something well. I went to [a psychiatrist] once, and he never called me back. They always say that time changes things, but you actually have to change them yourself. I've never met a person I couldn't call a beauty. New things are always better than old things. I'm still a commercial artist. I was always a commercial artist.

National Education Technology Plan Arthur P. Hershaft, 2011 Education is the key to America's economic growth and prosperity and to our ability to compete in the global economy. It is the path to higher earning power for Americans and is necessary for our democracy to work. It fosters the cross-border, cross-cultural collaboration required to solve the most challenging problems of our time. The National Education Technology Plan 2010 calls for revolutionary transformation. Specifically, we must embrace innovation and technology which is at the core of virtually every aspect of our daily lives and work. This book explores the National Education Technology Plan which presents a model of learning powered by technology, with goals and recommendations in five essential areas: learning, assessment, teaching, infrastructure and productivity.
