Landscape protection, management and planning entail rights and responsibilities for everyone. The Council of Europe Landscape Convention aims to promote the protection, management and planning of landscapes, and to organise international co-operation in this field. It applies to the entire territory of the contracting parties and covers natural, rural, urban and peri-urban areas. It concerns landscapes considered outstanding, as well as everyday or degraded areas. This publication presents thoughts and proposals for the implementation of the convention and addresses a mosaic of key issues related to its future. It forms part of a process of reflection on major themes concerning the living environment.

Seize the Daylight David Prerau,2009-04-28 Benjamin Franklin conceived of it. Sir Arthur Conan Doyle endorsed it. Winston Churchill campaigned for it. Kaiser Wilhelm first employed it. Woodrow Wilson and Franklin Roosevelt went to war with it, and more recently the United States fought an energy crisis with it. For several months every year, for better or worse, daylight savings time affects vast numbers of people throughout the world. And from Ben Franklin's era to today, its story has been an intriguing and sometimes-bizarre amalgam of colorful personalities and serious technical issues, purported costs and perceived benefits, conflicts between interest groups and government policymakers. It impacts diverse and unexpected areas, including agricultural practices, street crime, the reporting of sports scores, traffic accidents, the inheritance rights of twins, and voter turnout. Illustrated with a popular look at science and history, *Seize the Daylight* presents an intriguing and surprisingly entertaining story of our attempt to regulate the sunlight hours.

Dropping the Struggle Roger Housden,2016-08-05 Is it possible to fully accept, even love, the life you have? Is it possible to drop the struggle to make yourself and your life different? Acclaimed teacher and bestselling author Roger Housden says yes in this profound alternative to nonstop striving and self-criticism. Whether about our relationships, careers, or spirituality, many of

us judge ourselves as not measuring up. But fulfillment comes when we stop struggling and learn to trust the wisdom of what life presents us with. Housden wrote *Dropping the Struggle* as someone who, up until a few years ago, spent much of his time in a covert struggle with life. Despite his success, he often felt that something was missing. He struggled for years with an ongoing spiritual longing, with questions of meaning and purpose, with the search for love, with all the usual difficulties of being human, until he finally realized — though not with his thinking mind — that the only thing life was asking of him was to rest in a deeper knowing that was always there, usually silently, behind the arguments and strategies that would so commonly occupy his conscious self. “Struggle will never get us the things we want most,” Housden writes, “love; meaning; presence; freedom from anxiety over the past and future; contentment with ourselves exactly as we are, imperfections and all; the acceptance of our mortality — because these things lie outside the ego’s domain. For these, we need another way. That way begins and ends in surrender, in letting go of our resistance to life as it presents itself.”

Integer Programming and Network Models H.A.

Eiselt, Carl-Louis Sandblom, 2013-03-14 The purpose of this book is to provide readers with an introduction to the very active field of integer programming and network models. The idea is to cover the main parts of the field without being too detailed or too technical. As a matter of fact, we found it somewhat surprising that most—especially newer—books are strongly algorithmically oriented. In contrast, the main emphasis of this book is on models rather than methods. This focus expresses our view that methods are tools to solve actual problems and not ends in themselves. As such, graduate (and with some omissions, undergraduate) students may find this book helpful in their studies as will practitioners who would like to get acquainted with a field or use this text as a refresher. This premise has resulted in a coverage that omits

material that is standard fare in other books, whereas it covers topics that are only infrequently found elsewhere. There are some, yet relatively few, prerequisites for the reader. Most material that is required for the understanding of more than one chapter is presented in one of the four chapters of the introductory part, which reviews the main results in linear programming, the analysis of algorithms, graphs and networks, and dynamic programming, respectively. Readers who are familiar with the issues involved can safely skip that part. The three main parts of the book rely on intuitive reasoning and examples, whenever practical, instead of theorems and proofs.

Making Time Yulia Frumer, 2018-01-19 What is time made of? We might balk at such a question, and reply that time is not made of anything—it is an abstract and universal phenomenon. In Making Time, Yulia Frumer upends this assumption, using changes in the conceptualization of time in Japan to show that humans perceive time as constructed and concrete. In the mid-sixteenth century, when the first mechanical clocks arrived in Japan from Europe, the Japanese found them interesting but useless, because they failed to display time in units that changed their length with the seasons, as was customary in Japan at the time. In 1873, however, the Japanese government adopted the Western equal-hour system as well as Western clocks. Given that Japan carried out this reform during a period of rapid industrial development, it would be easy to assume that time consciousness is inherent to the equal-hour system and a modern lifestyle, but Making Time suggests that punctuality and time-consciousness are equally possible in a society regulated by a variable-hour system, arguing that this reform occurred because the equal-hour system better reflected a new conception of time — as abstract and universal—which had been developed in Japan by a narrow circle of astronomers, who began seeing time differently as a result of their measurement and calculation practices. Over the course of a few short decades this new way of conceptualizing time spread,

gradually becoming the only recognized way of treating time.
