**Universities in Transition** Bo Göransson, Claes Brundenius, 2010-12-16 Globalization, the information age, and the rise of the knowledge-based economy are significantly transforming the way we acquire, disseminate, and transform knowledge. And, as a result, knowledge production is becoming closer and more directly linked to economic competitiveness. This evolution is also putting new and urgent demands on academic institutions to adjust to the changing needs of society and economy. In particular, there is growing pressure on the institutions of higher education and research in developed economies to find and affirm their new role in the national innovation system. Their counterparts in developing economies need to define their role in supporting emerging structures of the innovation system. This book examines the role of universities and national research institutes in social and economic development processes. Featuring contributions that showcase initiatives and innovations from around the world, including China, Eastern Europe, Latin America, Scandinavia, Southeast Asia, sub-Saharan Africa, and Western Europe, it offers timely insight that will be of interest to policymakers, university administrators, economic and social leaders, and researchers alike.

Survival Strategies of Poor Women in Urban Africa C. O'Reilly, A. Gordon, 1995 Urban poverty is increasing alongside growing urban populations in sub-Saharan Africa. Women constitute a significant proportion of the urban poor, but their role is often neglected by development projects. This publication highlights the range of strategies that women have devised for themselves in order to cope with difficult economic circumstances in present-day Zambia. Natural resources figure prominently in urban women's activities, not only as a source of food and fuel, but as a source of income through trading activities. Ways in which women's livelihoods can be improved are also discussed.

**Human Security** W.E. Blatz, 1966-12-15 During his lifetime, W.E. Blatz was so much occupied with the development of the University of Toronto's Institute of Child Study that he was able to devote little time to writing. This is his first book to appear in twenty-one years, and his first complete exposition of his famous Theory of Security. The Theory of Security is radically different from the theories promulgated by Freudian psychologists. Whereas Freudian personality theory is based on the notion of "unconscious," an entity that is only indirectly observable, the Theory of Security derives from the observation of the conscious state in all its manifestations. Dr. Blatz thus makes use of both empirical observations and the results of introspection, and, as might be expected, some of his conclusions run counter to those reached in much current psychological discussion. But proof of the forcible influence of the theory and its author may be found in the impressive number of books and articles already published by Dr. Blatz's associates at the Institute of Child Study, applying the theory to the practical problems of psychological observation and therapy. It is fitting that the man whose work has generated so much fruitful research by others in this field should at last have set down in book form the fundamental principles that guided them.
