Tinny's Tiny Secret Russ Bolts,2020-11-03 Joe and Rob are sent to Bot School Jail for a prank they didn't commit. Now it's up to Tinny to save them in this ninth adventure in the hilarious Bots chapter book series. Many years ago, scientists on Earth sent video satellites out to the end of the universe to see what was hiding in deep space. Now, years later, these satellites have begun sending their first videos back to Earth...and the stars of the show are two goofy robots. When Joe and Rob are found guilty of Bot School hijinks, they are sent to Bot School Jail. The only problem is, they are innocent and only Tinny has the key to their freedom. Will she use it or throw away the key forever? With easy-to-read language and graphic novel art on almost every page, the Bots chapter books are perfect for emerging readers.

Beta-Life Martyn Bedford,Robin Yassin-Kassab,Adam Marek,Andy Hedgecock,Stuart Evers,Adam Roberts,Annie Kirby,Margaret Wilkinson,Sean O'Brien,Julian Gough,Sarah Schofield,Zoe Lambert,Lucy Caldwell,Claire Dean,Dinesh Allirajah,K.J. Orr,Joanna Quinn,Frank Cottrell-Boyce,Toby Litt,2015-06-15 Computers are changing. Soon the silicon chip will seem like a clunky antique amid the bounty of more exotic processes on offer. Robots are changing too; material evolution and swarm intelligence are creating a new generation of devices that will diverge and disperse into a balanced ecosystem of humans and 'robjjects' (robotic objects). Somewhere in between, we humans will have to change also... in the way we interact with technology, the roles we adopt in an increasingly 'intelligent' environment, and how we interface with each other. The driving motors behind many of these changes will be artificial life (A-Life) and unconventional computing. How exactly they will impact on our world is still an open question. But in the spirit of collective intelligence, this anthology brings together 38 scientists and authors, working in pairs, to imagine what life (and A-Life) will look like in the year 2070. Every kind of technology is imagined: from lie-detection glasses to military swarmbots, brain-interfacing implants to synthetically 'grown' skyscrapers, revolution-inciting computer games to synthetically engineered haute cuisine. All artificial life is here. Featuring scientific contributions from: Martyn Amos, J. Mark Bishop, Seth Bullock, Stephen Dunne, James Dyke, Christian Jantzen, Francesco Mondada, James D. O'Shea, Andrew Philippides, Lenka Pitonakova, Steen Rasmussen, Thomas S. Ray, Micah Rosenkind, James Snowdon, Susan Stepney, Germán Terrazas, Andrew Vardy and Alan Winfield. Shoaling with Fish: Using Miniature Robotic Agents to Close the Interaction Loop with Groups of Zebrafish *Danio rerio* Frank Bonnet,Francesco Mondada,2019-05-30 Robotic animals are nowadays developed for various types of research, such as bio-inspired robotics, biomimetics and animal behavior studies. More specifically, in the case of collective animal behavior research, the robotic device can interact with animals by generating and exploiting signals relevant for social behavior. Once perceived by the animal society as conspecific, these robots can become powerful tools to study the animal behaviors, as they can at the same time monitor the changes in behavior and influence the collective choices of the animal society. In this book, we present novel robotized tools that can integrate shoals of fish in order to study their collective behaviors. We used the current state of the art on the zebrafish social behavior to define the specifications of the robots, and we performed stimuli analysis to improve their developments. Bio-inspired controllers were designed based on data extracted from experiments with zebrafish for the robots to mimic the zebrafish locomotion underwater. Experiments involving mixed groups of fish and robots qualified the robotic system to be integrated among a zebrafish shoal and to be able to influence the collective decisions of the fish. These results are very promising for the field of animal-robot interaction studies, as we showed the effect of the robots in long-duration experiments and repetitively, with the same order of response from the animals.

Between Sea and Sky: Aerial Aquatic Locomotion in Miniature Robots Raphael Zufferey,Robert Siddall,Sophie F. Armanini,Mirko Kovac,2022-01-03 This book reports on the state of the art in the field of aerial-aquatic locomotion, focusing on the main challenges concerning the translation of this important ability from nature to synthetic systems, and describing innovative engineering solutions that have been applied in practice by the authors at the Aerial Robotics Lab of Imperial College London. After a general introduction to aerial-aquatic locomotion in nature, and a summary of the most important engineering achievements, the book introduces readers to important physical and mathematical aspects of the multimodal locomotion problem. Besides the basic physics involved in aerial-aquatic locomotion, the role of different phenomena happening in fluids, or those due to structural mechanics effects or to power provision, are presented in depth, across a large dimension range, from millimeters to hundreds of meters. In turn, a practice-oriented discussion on the obstacles and opportunities of miniaturization, for both robots and animals is carried out. This is followed by applied engineering considerations, which describe relevant hardware considerations involved in propulsion, control, communication and

fabrication. Different case studies are analyzed in detail, reporting on the latest research carried out by the authors, and covering topics such as propulsive aquatic escape, the challenging mechanics of water impact, and a hybrid sailing and flying aircraft. Offering extensive and timely information on the design, construction and operation of small-scale robots, and on multimodal locomotion, this book provides researchers, students and professionals with a comprehensive and timely reference guide to the topic of aerial-aquatic locomotion, and the relevant bioinspired approaches. It is also expected to inspire future research and foster a stronger multidisciplinary discussion in the field.

LATIN 2004: Theoretical Informatics Martin Farach-Colton,2004-02-20 This volume contains the proceedings of the Latin American Theoretical Inf- matics (LATIN) conference that was held in Buenos Aires, Argentina, April 5-8, 2004. The LATIN series of symposia was launched in 1992 to foster interactions between the Latin American community and computer scientists around the world. This was the sixth event in the series, following S~ ao Paulo, Brazil (1992), Valparaíso, Chile (1995), Campinas, Brazil (1998), Punta del Este, Uruguay (2000), and Cancun, Mexico (2002). The proceedings of these conferences were also published by Springer-Verlag in the Lecture Notes in Computer Science series: Volumes 583, 911, 1380, 1776, and 2286, respectively. Also, as before, we published a selection of the papers in a special issue of a prestigious journal. We received 178 submissions. Each paper was assigned to four program c- mittee members, and 59 papers were selected. This was 80% more than the previous record for the number of submissions. We feel lucky to have been able to build on the solid foundation provided by the increasingly successful previous LATINs. And we are very grateful for the tireless work of Pablo Mart´ nez L´ opez, the Local Arrangements Chair. Finally, we thank Springer-Verlag for publishing these proceedings in its LNCS series.

She’s committed to helping her robot friends save their home world. To do that, Ruby and the robots need to travel to a planet they just learned about, in a part of space that is supposed to be forbidden to them. It’s a planet that should hold the answers to the questions of the robots existence, and hopefully Ruby can prevent a big reboot from wiping the robots slate clean! Can Ruby keep her robot friends safe, help them find what they need, and then maybe have a normal life again?
