The Problem with Native JavaScript APIs Nicholas C. Zakas,2012-07-19 Many features inspired by popular JavaScript libraries are now available as native JavaScript APIs in today's powerful browsers. While that may seem convenient given all of the JavaScript you need to write, relying on these APIs will only make code maintenance more difficult in the long run. In this report, Nicholas Zakas—consultant and former front-end tech leader at Yahoo!—provides a case study to show how different browsers can develop native APIs for the same specification and still end up with different interpretations. You'll discover how these APIs can tie your code to specific browsers, forcing you to upgrade application logic whenever new browsers and new browser versions are released.

Mobile Computing, Applications, and Services Petros Zerfos,Rebecca Montanari,Thomas Phan,2010-06-08 This proceedings volume includes the full research papers presented at the First Int- national Conference on Mobile Computing, Applications, and Services (MobiCASE) held in San Diego, California, during October 26-29, 2009. It was sponsored by ICST and held in conjunction with the First Workshop on Innovative Mobile User Inter- tivity (WIMUI). MobiCASE highlights state-of-the-art academic and industry research work in - main topics above the OSI transport layer with an emphasis on complete end-to-end systems and their components. Its vision is largely influenced by what we see in the consumer space today: high-end mobile phones, high-bandwidth wireless networks, novel consumer and enterprise mobile applications, scalable software infrastructures, and of course an increasingly larger user base that is moving towards an almost a- mobile lifestyle. This year's program spanned a wide range of research that explored new features, algorithms, and infrastructure related to mobile platforms. We received submissions from many countries around the world with a high number from Europe and Asia in addition to the many from North America. Each paper received at least three in- pendent reviews from our Technical

Program Committee members during the Spring of 2009, with final results coming out in July. As a result of the review process, we selected 15 high-quality papers and complemented them with six invited submissions from leading researchers, reaching the final count of 21 papers in the program.

Titanium Alloy in Action Ricardo Alcocer,2015-05-05 Mastering Java and Objective-C to write high-quality Android and iOS apps isn't necessary with the Titanium mobile development toolkit, which can be used to create native mobile applications using standard web technologies like XML, TSS (similar to CSS and HTML), and JavaScript. Titanium compiles code against native platform SDKs to produce apps with the same features made possible using Objective-C and Java. Alloy, the open source MVC framework designed for Titanium, enforces good application design helping keep app's UI, business logic, and data separate so code is easier to read and maintain. Titanium Alloy in Action introduces Titanium and the Alloy MVC framework to web developers and graphic designers new to mobile app development. It begins with easy steps, laying out the tools and orienting readers to the world of mobile development, allowing them to quickly turn their designs into fully working apps. Using real-life examples, the book explains how to use XML, TSS, and JavaScript to build fully-native iOS and Android apps from a single code base, connect them to a cloud server, and deploy them to app stores. Along the way, it points out the main differences between iOS and Android, their visual language and UX paradigms, and the best approach to cross-platform mobile development. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications.
