Experiencing Wages Peter Scholliers,Leonard Schwarz,2003-09-30 When discussing wages, historians have traditionally concentrated on the level of wages, much less on how people were paid for their work. Important aspects were thus ignored such as how frequently were wages actually paid, how much of the wage was paid in non-monetary form - whether as traditional perquisites or community relief - especially when there was often insufficient coinage available to pay wages. Covering a wide geographical area, ranging from Spain to Finland, and time span, ranging from the sixteenth century to the 1930s, this volume offers fresh perspectives on key areas in social and economic history such as the relationship between customs, moral economy, wages and the market, changing pay and wage forms and the relationship between age, gender and wages.

Experimental Biology William McGuire,2013-12-14 Breast cancer continues to be the focus of intense basic and clinical research. In Valurne 1 of this series we dealt exclusively with topics concerned with therapy. In the present Valurne 2, we turn our attention to the experimental biology which is the foundation for our understanding of problems concerned with breast cancer etiology, mechanisms of hormone action, cell kinetics, experimental chemotherapy, and markers of tumor burden. The contributors to the volume are all noted scholars who are personally investigating these problems. The first chapter addresses the question, do hormones cause breast cancer? Segaloff provides us with a rational up-to-date overview of the existing data. He concludes that hormones by themselves are not tumor initiators but rather alter the host environment so that other carcinogens are effective. It is pointed out that the selection of the model test system is critical; one can almost assure any desired result by choosing an appropriately biased test system. The question of the role of viruses in the etiology of human breast cancer remains unanswered despite elegant studies in mouse systems.
