Character as Moral Fiction Mark Alfano,2013-02-14 Everyone wants to be virtuous, but recent psychological investigations suggest that this may not be possible. Mark Alfano challenges this theory and asks, not whether character is empirically adequate, but what characters human beings could have and develop. Although psychology suggests that most people do not have robust character traits such as courage, honesty and open-mindedness, Alfano argues that we have reason to attribute these virtues to people because such attributions function as self-fulfilling prophecies - children become more studious if they are told that they are hard-working and adults become more generous if they are told that they are generous. He argues that we should think of virtue and character as social constructs: there is no such thing as virtue without social reinforcement. His original and provocative book will interest a wide range of readers in contemporary ethics, epistemology, moral psychology and empirically informed philosophy.

Multiple-Valued Logic Design G Epstein,2017-09-29

Multiple-Valued Logic Design: An Introduction explains the theory and applications of this increasingly important subject. Written in a clear and understandable style, the author develops the material in a skillful way. Without using a huge mathematical apparatus, he introduces the subject in a general form that includes the well-known binary logic as a special case. The book is further enhanced by more 200 explanatory diagrams and circuits, hardware and software applications with supporting PASCAL programming, and comprehensive exercises with even-numbered answers for every chapter. Requiring introductory knowledge in Boolean algebra, 2-valued logic, or 2-valued switching theory, Multiple-Valued Logic Design: An Introduction is an ideal book for courses not only in logic design, but also in switching theory, nonclassical logic, and computer arithmetic.

Computer scientists, mathematicians, and electronic engineers can also use the book as a basis for research into multiple-valued logic design.

Reversible Computation Martin Kutrib,Uwe

Meyer,2023-07-11 This book constitutes the refereed proceedings of the 15th International Conference on Reversible Computation, RC 2023, held in Giessen, Germany, during July 18-19, 2023. The 11 full papers and 3 short papers included in this book were carefully reviewed and selected from 19 submissions. They were organized in topical sections as follows: Foundations; Reversible Programming; Quantum Computing; and Quantum Circuits.

Handbook of Integral Equations Polyanin Polyanin,Alexander V. Manzhirov,2008-02-12 Unparalleled in scope compared to the literature currently available, the Handbook of Integral Equations, Second Edition contains over 2,500 integral equations with solutions as well as analytical and numerical methods for solving linear and nonlinear equations. It explores Volterra, Fredholm, WienerHopf, Hammerstein, Uryson, and other equa

Cloud-Resolving Modeling of Convective Processes

Xiaofan Li,Shouting Gao,2016-05-17 This is an updated and revised second edition of the book presenting new developments in the field of cloud-resolving modeling. The first edition of the book introduces the framework of cloud-resolving model, methodologies for analysis of modeling outputs, and validation of simulations with observations. It details important scientific findings in the aspects of surface rainfall processes, precipitation efficiency, dynamic and thermodynamic processes associated with tropical convection, diurnal variations, radiative and cloud microphysical processes associated with development of cloud clusters, air-sea coupling on convective scales, climate equilibrium states, and remote sensing applications. In addition to the content from the first edition of the book, the second edition of the book contains the new scientific results in the development of convective-stratiform rainfall separation scheme,

the analysis of structures of precipitation systems, the thermal effects of doubled carbon dioxide on rainfall, precipitation predictability, and modeling depositional growth of ice crystal. The book will be beneficial both to graduate students and to researchers who do cloud, mesoscale and global modeling.

Advances in Numerical Heat Transfer, Volume 2 W.

Minkowycz,2018-12-13 This volume discusses the advances in numerical heat transfer modeling by applying high-performance computing resources, striking a balance between generic fundamentals, specific fundamentals, generic applications, and specific applications.

Airplane Flight Dynamics and Automatic Flight Controls Jan Roskam,1998 In this part, exhaustive coverage is provided of the methods for analysis and synthesis of automatic flight control systems using classical control theory. This widely used book has been updated with the latest software methods. Throughout this text, the practical (design) applications of the theory are stressed with many examples and illustrations. Aircraft stability and control characteristics are all heavily regulated by civil as well as by military airworthiness authorities for safety reasons. The role of the these safety regulations in the application of the theory is therefore stressed throughout. Airplane Flight Dynamics & Automatic Flight Controls, Part II, is an essential reference for all aeronautical engineers working in the area of stability and control, regardless of experience levels. The book minimizes reader confusion through a systematic progression of fundamentals: - Elastic airplane stability and control coefficients and derivatives - Method for determining the equilibrium and manufacturing shape of an elastic airplane - Subsonic and supersonic numerical examples of aeroelasticity effects on stability & control derivatives - Bode and root-locus plots with open and closed loop airplane applications, and coverage of inverse applications - Stability augmentation systems: pitch

dampers, yaw dampers and roll dampers - Synthesis concepts of automatic flight control modes: control-stick steering, auto-pilot hold, speed control, navigation and automatic landing - Digital control systems using classical control theory applications with Z-transforms - Applications of classical control theory - Human pilot transfer functions. --Descripción del editor.

Neural Computing and Applications to Marine Data Analytics Jun Li, Zhengguang Zhang, Lulu Qiao, Andrei Herdean, 2022-03-30

The 15th International Conference on Biomedical Engineering James Goh, 2013-11-18 This volume presents the processing of the 15th ICMBE held from 4th to 7th December 2013, Singapore. Biomedical engineering is applied in most aspects of our healthcare ecosystem. From electronic health records to diagnostic tools to therapeutic, rehabilitative and regenerative treatments, the work of biomedical engineers is evident. Biomedical engineers work at the intersection of engineering, life sciences and healthcare. The engineers would use principles from applied science including mechanical, electrical, chemical and computer engineering together with physical sciences including physics, chemistry and mathematics to apply them to biology and medicine. Applying such concepts to the human body is very much the same concepts that go into building and programming a machine. The goal is to better understand, replace or fix a target system to ultimately improve the quality of healthcare. With this understanding, the conference proceedings offer a single platform for individuals and organizations working in the biomedical engineering related field to gather and network with each other in so doing create the catalyst for future development of biomedical engineering in Asia.

Predicting the Future in Science, Economics, and Politics

Frank Whelon Wayman, The Late Paul R.

Williamson, Solomon Polachek, Bruce Bueno de

Mesquita, 2014-08-29 It is a puzzle that while academic research has increased in specialization, the important and complex problems facing humans urgently require a synthesis of understanding. This unique collaboration attempts to address such a problem by bringing together

Geochronology and Thermochronology

Peter W.

Reiners, Richard W. Carlson, Paul R. Renne, Kari M. Cooper, Darryl E. Granger, Noah M. McLean, Blair Schoene, 2017-11-21 This book

is a welcome introduction and reference for users and innovators in geochronology. It provides modern perspectives on the current state-of-the art in most of the principal areas of geochronology and thermochronology, while recognizing that they are changing at a fast pace. It emphasizes fundamentals and systematics, historical perspective, analytical methods, data interpretation, and some applications chosen from the literature. This book complements existing coverage by expanding on those parts of isotope geochemistry that are concerned with dates and rates and insights into Earth and planetary science that come from temporal perspectives. Geochronology and Thermochronology offers chapters covering: Foundations of Radioisotopic Dating; Analytical Methods; Interpretational Approaches: Making Sense of Data; Diffusion and Thermochronologic Interpretations; Rb-Sr, Sm-Nd, Lu-Hf; Re-Os and Pt-Os; U-Th-Pb Geochronology and Thermochronology; The K-Ar and $^{40}\text{Ar}/^{39}\text{Ar}$ Systems; Radiation-damage Methods of Geo- and Thermochronology; The (U-Th)/He System; Uranium-series Geochronology; Cosmogenic Nuclides; and Extinct Radionuclide Chronology. Offers a foundation for understanding each of the methods and for illuminating directions that will be important in the near future Presents the fundamentals, perspectives, and opportunities in modern geochronology in a way that inspires further innovation, creative

technique development, and applications Provides references to rapidly evolving topics that will enable readers to pursue future developments Geochronology and Thermochronology is designed for graduate and upper-level undergraduate students with a solid background in mathematics, geochemistry, and geology. The Oxford Handbook of the Epistemology of Theology

William J. Abraham, Frederick D. Aquino, 2017-06-01 The Oxford Handbook of the Epistemology of Theology brings together leading scholars in the fields of theology and epistemology to examine and articulate what can be categorized as appropriate epistemic evaluation in theology. Part one focuses on some of the epistemic concepts that have been traditionally employed in theology such as knowledge of God, revelation and scripture, reason and faith, experience, and tradition. This section also considers concepts that have not received sufficient epistemological attention in theology, such as saints, authority, ecclesial practices, spiritual formation, and discernment. Part two concentrates on epistemic concepts that have received significant attention in contemporary epistemology and can be related to theology such as understanding, wisdom, testimony, virtue, evidence, foundationalism, realism/antirealism, scepticism, and disagreement. Part three offers examples from key figures in the Christian tradition and investigates the relevant epistemological issues and insights in these writers, as well as recognizing the challenges of connecting insights from contemporary epistemology with the subject of theology proper, namely, God. Part four centres on five emerging areas that warrant further epistemological consideration: Liberation Theology, Continental Philosophy, modern Orthodox writers, Feminism, and Pentecostalism. This authoritative collection explores how the various topics, figures, and emerging conversations can be reconceived and addressed in light of recent developments in

epistemology. Each chapter provides an analysis of the crucial moves, positions, and debates, while also identifying relevant epistemic considerations. This Handbook fulfils the need for the development of this new conversation that will take its natural place in the intersection of theology and epistemology. It links the fields of theology and epistemology in robust, meaningful, and significant ways.

Appalachian Trail Conference, 1950

Basic Engineering Circuit Analysis J. David Irwin, R. Mark Nelms, 2020-08-18 Basic Engineering Circuit Analysis has long been regarded as the most dependable textbook for computer and electrical engineering majors. In this new edition, Irwin and Nelms continue to develop the most complete set of pedagogical tools available and provide the highest level of support for students entering into this complex subject. Irwin and Nelms trademark student-centered learning design focuses on helping students complete the connection between theory and practice. Key concepts are explained clearly and illustrated by detailed, worked examples. These are then followed by Learning Assessments, which allow students to work similar problems and check their results against the answers provided.

Field Theory of Non-Equilibrium Systems Alex Kamenev, 2023-01-05 The physics of non-equilibrium many-body systems is a rapidly expanding area of theoretical physics. Traditionally employed in laser physics and superconducting kinetics, these techniques have more recently found applications in the dynamics of cold atomic gases, mesoscopic and nano-mechanical systems, and quantum computation. This book provides a detailed presentation of modern non-equilibrium field-theoretical methods, applied to examples ranging from biophysics to the kinetics of superfluids and superconductors. A highly pedagogical and self-contained approach is adopted within the text, making it ideal as a reference for graduate students and

researchers in condensed matter physics. In this Second Edition, the text has been substantially updated to include recent developments in the field such as driven-dissipative quantum systems, kinetics of fermions with Berry curvature, and Floquet kinetics of periodically driven systems, among many other important new topics. Problems have been added throughout, structured as compact guided research projects that encourage independent exploration.

A Son, a Prince, a Husband, a King: Ramayan an Interpretation Jiotty Kaushal, 2012-08 Serialised on BBC Asian Network. Described as Wonderful by Carol Ann Duffy (Poet Laureate). Highly commended in a live TV interview by Mr. B.M. Gupta - President of the National Council of Hindu Temples (UK). A concise, fully illustrated, poetic version of the sacred Hindu text : the Ramayan : aimed at readers aged 11yrs and above : conveying Raam's complete life story. Mr Ashwini Malhi from BBC Asian Network quoted: This is an easy to follow, epic tale of the epitome of Raam's life that gives insight and guidance on how to lead a virtuous life. Jiotty Kaushal has illustrated that the morals and principles practiced thousands of years ago have the same value, even today.

Encyclopedia of Optimization Christodoulos A. Floudas, Panos M. Pardalos, 2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research, the richness of ideas, and the breadth of applications that has come from this field. The second edition builds on the success of the former edition with more than 150 completely new entries, designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced. Particularly heavy attention resulted in health science and transportation, with entries such as Algorithms for Genomics, Optimization and Radiotherapy Treatment Design, and Crew Scheduling.

chemistry deals
with synthesis and

behavior of inorganic and organometallic compounds this field covers chemical compounds that are not carbon based which are the subjects of organic chemistry the distinction between the two disciplines is far from absolute as there is much overlap in the subdiscipline of organometallic chemistry
