Quality for DevOps teams Rik Marselis,Dennis Geurts,Wouter Ruigrok,Berend van Veenendaal,2020-03-17 Supporting teams in implementing quality in DevOps culture, with practical examples, useful knowledge and some theoretical background. To continuously deliver IT systems at speed with a focus on business value, DevOps teams integrate quality engineering in their way of working. This book supports teams in implementing quality in their DevOps culture, with practical examples, useful knowledge and some theoretical background. For example, it describes how to benefit from a CI/CD pipeline. TMAP is the body of knowledge for quality engineering in IT delivery and builds on practical experience from thousands of people in more than twenty-five years. The website, www.tmap.net, supports any kind of IT delivery model. This book, however, focuses on DevOps: today's implementation of high-performance IT delivery.

TMap next Tim Koomen,Bart Broekman,Leo van der Aalst,Michiel Vroon,2013-03-26 TMap is a test method that can be summarised by four essential points * The client manages the test process on rational and economic grounds: Business Driven Test Management (BDTM). * The comprehensive test process, from test execution through test management, includes ample tips and examples. * TMap contains a complete 'tool set', i.e. technique descriptions and organisational and infrastructure support. * TMap is an adaptive method that is suitable for test situations in most environments (such as new development, maintenance, waterfall / iterative / agile development, customised or package software, outsourcing). TMap offers the tester and the test manager guidelines to deliver results for the client. Through the years, TMap evolved into a de facto standard for testing information systems. It is currently implemented in hundreds of companies and institutions all over the world. The power of TMap can be largely ascribed to the many experiences from actual practice that it incorporates. This makes the book a valuable tool for current and future challenges in the field of testing.

TMap NEXT Leo van der Aalst,Ewald Roodenrijs,Johan Vink,Rob Baarda,2013-03-25 Business Driven Test Management (BDTM) This book offers business and IT managers

insight into the possibilities of exerting increased business control of the test process: Business Driven Test Management (BDTM). The concept of BDTM prioritises the result and gives the client of the test process (whether a business or IT manager) the ability to manage the risk coverage, lead time and cost of the test process in both the planning and the execution phases. The book also contains an introduction to and summary of the TMap NEXT® Test Management Approach. TMap is the industry standard for testing that can be summarised in four essential principles: * Business Driven Test Management allows the client to manage testing on the basis of business considerations. * A full description of the test process, from test management to test specification & execution. * A complete 'toolbox' of technique descriptions and organisational & infrastructure support. * The method is adaptive, making it suitable for use in a range of situations and environments (new development, maintenance, waterfall / iterative / agile, custom-made / off-the-shelf software, outsourcing / offshoring). Over the years, TMap has evolved into the de facto standard for testing information systems. In 2006 it was updated as TMap NEXT, incorporating user experience and feedback and many practical examples, making it a highly valuable tool for current and future challenges in the field of testing. TMap NEXT is currently used in hundreds of companies and institutions in a broad range of sectors, including financial services, telecoms, government, utilities and aerospace. In addition to a summary of the methodology, this book features a detailed description of Business Driven Test Management and is therefore ideal for test managers who want to improve the quality of testing in their organisations.

TMap NEXT Testing Clouds Ewald Roodenrijs,2011-05-24 TMap NEXT® Testing Clouds is different from its TMap predecessors. Whereas the books in the TMap series are handbooks with step-by-step information, this book is an innovation, about testing clouds for the early adopter. It describes the cloud business model for testing, Business Technology and steps we took in cloud projects. The Cloud is still at an early stage, but the growth of cloud-based computing is outstripping even the most optimistic predictions. Its early 2011 and almost all forecasts of the most important IT technologies name cloud computing in their Top 3. That growth is based on a compelling value proposition: speed to market, agility to bring forward or retire service, and the chance to move expenditure from CapEx into OpEx. Although the cloud is still in its infancy, it is increasingly clear that the cloud model will supplement, if not entirely replace, mainframe and client/server installations in the years to come. The cloud is a business model or platform on which testing must be carried out just like any other service. It enables convenient, on- demand network access to a shared pool of configurable computing resources. It is not only an IT opportunity, but a strategic business opportunity; it creates the ability to get the business in charge of IT and change from Information Technology (IT) to Business Technology (BT). And as the Cloud Era emerges, testing will change! Not only for information systems, but also for testing the infrastructure, cloud- enabled applications, and the ability to have instant deployable test infrastructure. Testing applications on the cloud is the same as testing applications on a traditional infrastructure. Only what is tested is different.

Geocomputation with R Robin Lovelace,Jakub Nowosad,Jannes Muenchow,2019-03-22 Geocomputation with R is for people who want to analyze, visualize and model geographic data with open source software. It is based on R, a statistical programming language that has powerful data processing, visualization, and geospatial capabilities. The book equips you with the knowledge and skills to tackle a wide range of issues manifested in geographic data, including those with scientific, societal, and environmental implications. This book will

interest people from many backgrounds, especially Geographic Information Systems (GIS) users interested in applying their domain-specific knowledge in a powerful open source language for data science, and R users interested in extending their skills to handle spatial data. The book is divided into three parts: (I) Foundations, aimed at getting you up-to-speed with geographic data in R, (II) extensions, which covers advanced techniques, and (III) applications to real-world problems. The chapters cover progressively more advanced topics, with early chapters providing strong foundations on which the later chapters build. Part I describes the nature of spatial datasets in R and methods for manipulating them. It also covers geographic data import/export and transforming coordinate reference systems. Part II represents methods that build on these foundations. It covers advanced map making (including web mapping), bridges to GIS, sharing reproducible code, and how to do cross-validation in the presence of spatial autocorrelation. Part III applies the knowledge gained to tackle real-world problems, including representing and modeling transport systems, finding optimal locations for stores or services, and ecological modeling. Exercises at the end of each chapter give you the skills needed to tackle a range of geospatial problems. Solutions for each chapter and supplementary materials providing extended examples are available at https://geocompr.github.io/geocompkg/articles/. Dr. Robin Lovelace is a University Academic Fellow at the University of Leeds, where he has taught R for geographic research over many years, with a focus on transport systems. Dr. Jakub Nowosad is an Assistant Professor in the Department of Geoinformation at the Adam Mickiewicz University in Poznan, where his focus is on the analysis of large datasets to understand environmental processes. Dr. Jannes Muenchow is a Postdoctoral Researcher in the GIScience Department at the University of Jena, where he develops and teaches a range of geographic methods, with a focus on ecological modeling, statistical geocomputing, and predictive mapping. All three are active developers and work on a number of R packages, including stplanr, sabre, and RQGIS.

Technology Management Assessment Procedure C. J. P. Farrukh,R. Phaal,David Probert,2000 This training package contains a guide to the TMAP process as developed by the authors, a substantial facilitation guide that enables managers to undertake the processes gleaned from the course within their own companies, and a disk featuring support material.

TPI next Alexander van Ewijk,Bert Linker,Marcel van Oosterwijk,Ben Visser,2013-03-25 TPI® NEXT, the Business Driven Test Process Improvement model Over the past ten years, TPI® has proved to be the leading methodology to assess the maturity of an organizations or projects test process. This is a success we, at Sogeti, are very proud of. But this success by no means implies that we are `done and can rest on our laurels. Sogetis answer to this need: TPI® NEXT, the Business Driven Test Process Improvement model (BDTPI). The strengths of the original model (Key areas, Maturity levels, Checkpoints, Improvement suggestions and Stepwise improvement) have been kept and have been made even stronger. The improvements that make the new model truly business-driven are the Clusters and the Enablers. Since business drivers change over time and from entity to entity, this model is flexible and adaptable, and works in synch with Sogetis other worldleading test methodology, TMap® NEXT. But the Business Driven TPI model is independent so no matter what test method is used, this approach can be applied under any circumstance. If you have not started improving your testing process, now it is the time to begin, and, with the TPI® NEXT book at hand, it is now even easier to do so and to convince all of your stakeholders of its business value. But also, if you are already on the way to improving your testing process, a close look at Business Driven TPI will help you focus even more on the goal of improving your testing process, namely bringing business value to your organization!
