Introduction to Information Retrieval Christopher D. Manning,Prabhakar Raghavan,Hinrich Schütze,2008-07-07 Class-tested and coherent, this textbook teaches classical and web information retrieval, including web search and the related areas of text classification and text clustering from basic concepts. It gives an up-to-date treatment of all aspects of the design and implementation of systems for gathering, indexing, and searching documents; methods for evaluating systems; and an introduction to the use of machine learning methods on text collections. All the important ideas are explained using examples and figures, making it perfect for introductory courses in information retrieval for advanced undergraduates and graduate students in computer science. Based on feedback from extensive classroom experience, the book has been carefully structured in order to make teaching more natural and effective. Slides and additional exercises (with solutions for lecturers) are also available through the book's supporting website to help course instructors prepare their lectures.

The Good Shepherd and the Child Sofia Cavalletti,Patricia Coulter,Gianna Gobbi,2021-05-15 Anyone familiar with the Catechesis of the Good Shepherd has probably encountered the early description of this approach to the religious formation of the child in *The Good Shepherd and the Child: A Joyful Journey*. With major contributions by Sofia Cavalletti, Gianna Gobbi, Silvana Montanaro, and Patricia Coulter, this book has long been a “core text” for catechists and also for parents of children in the Catechesis of the Good Shepherd. Now there is a new edition, which reflects the changes in the presentations and the materials that Sofia Cavalletti made in the years before her death in August 2011. The original contributions of the authors are retained in Part I. In Part II, long time catechist and one of the first US catechists to study with Sofia Cavalletti, Rebekah Rojcewicz, has carefully outlined the current methods and developments in the work. This includes a selection of the key parables and scripture texts that are presented to the children. She also offers a new Introduction in which she describes the process by which the original authors and founders of the Catechesis of the Good Shepherd came to recognize the child’s potential for a relationship with God and learned what nurtures that experience. The original art work by Julie Coulter-English is retained in this new edition.

Teleneurology Richard Wootton,Victor Patterson,2005-04-12 Teleneurology refers to the use of telecommunications techniques such as the telephone, Internet, email, and videoconferencing to improve the delivery of neurology services. Containing 15 contributions from international clinicians, this volume provides an introduction to telemedicine as it is practiced in neurology today. It is divided into three sections: techniques, applications, and practical issues. Technical information has been kept to a minimum, as the emphasis is on the utility of each technique, rather than the technology itself. The editors are affiliated with the Center for Online Health at the U. of Queensland in Australia. Annotation :2005 Book News, Inc., Portland, OR (booknews.com).

The Choice Wine Steve Bollman,2016-02-09 God doesn’t want your marriage to simply survive. He wants it to be superabundant. Indeed, Christ’s first public miracle was to bring joy to a young couple when he turned approximately 150 gallons of ordinary water into the choicest of wines. The Choice Wine: 7 Steps to a Superabundant Marriage moves well beyond divorce-proofing your marriage to place a happier, healthier, and wealthier future within your grasp. Follow Steve Bollman on an amazing journey as he integrates the latest findings from modern science with the wisdom of the ages and a little common sense to expand your vision of marriage, including • the neurological research revealing the reality that husband and wife truly “become one,” • the medical science indicating that the human person transcends the limits of the visible world, and • the neurological reality that spouses are driven to be profoundly merciful to each other. Along the way, you’ll hear amazing stories destined to touch your heart: • the Nobel Laureate in Medicine who witnessed two instantaneous miracles, • the mother whose prayers transformed the heart of a mafia enforcer, and • a very special couple who reveals the power of love to transcend the limits of this world to have a foretaste of Paradise. The Choice Wine will help you experience the superabundant joy intended for marriage from the beginning.

Instrument Engineers' Handbook, Volume 3 Bela G. Liptak,Halit Eren,2016-04-19 Instrument Engineers' Handbook – Volume 3: Process Software and Digital Networks, Fourth Edition is the latest addition to an enduring collection that industrial automation (AT) professionals often refer to as the bible. First published in 1970, the entire handbook is approximately 5,000 pages, designed as standalone volumes that cover the measurement (Volume 1), control (Volume 2), and software (Volume 3) aspects of automation. This fourth edition of the third volume provides an in-depth, state-of-the-art review of control software packages used in plant optimization, control, maintenance, and safety. Each updated volume of this renowned reference requires about ten years to prepare, so revised installments have been issued every decade, taking into account the numerous developments that occur from one publication to the next. Assessing the rapid evolution of automation and optimization in control systems used in all types of industrial plants, this book details the wired/wireless communications and software used. This includes the ever-increasing number of applications for intelligent instruments, enhanced networks, Internet use, virtual private networks, and integration of control systems with the main networks used by management, all of which operate in a linked global environment. Topics covered include: Advances in new displays, which help operators to more quickly assess and respond to plant conditions Software and networks that help monitor, control, and optimize industrial processes, to determine the efficiency, energy consumption, and profitability of operations Strategies to counteract changes in market conditions and energy and raw material costs Techniques to fortify the safety of plant operations and the security of digital communications systems This volume explores why the holistic approach to integrating process and enterprise networks is convenient and efficient, despite associated problems involving cyber and local network security, energy conservation, and other issues. It shows how firewalls must separate the business (IT) and the operation (automation technology, or AT) domains to guarantee the safe function of all industrial plants. This book illustrates how these concerns must be addressed using effective technical solutions and proper management policies and practices. Reinforcing the fact that all industrial control systems are, in general, critically interdependent, this handbook provides a wide range of software application examples from industries including: automotive, mining, renewable energy, steel, dairy, pharmaceutical, mineral processing, oil, gas, electric power, utility, and nuclear power.

Fundamentals of Traffic Simulation Jaume Barceló,2011-01-06 The increasing power of computer technologies, the evolution of software engineering and the advent of the intelligent transport systems has prompted traf c simulation to become one of the most used approaches for traf c analysis in s- port of the design and evaluation of traf c systems. The ability of traf c simulation to emulate the time variability of traf c phenomena makes it a unique tool for capturing the complexity of traf c systems. In recent years, traf c simulation – and namely microscopic traf c simulation – has moved from the academic to the professional world. A wide variety of traf- c simulation software is currently available on the market and it is utilized by thousands of users, consultants, researchers and public agencies. Microscopic traf c simulation based on the emulation of traf c ows from the dynamics of individual vehicles is becoming one the most attractive approaches. However, traf c simulation still lacks a uni ed treatment. Dozens of

papers on theory and applications are published in scientific journals every year. A search of simulation-related papers and workshops through the proceedings of the last annual TRB meetings would support this assertion, as would a review of the minutes from specially dedicated meetings such as the International Symposiums on Traffic Simulation (Yokohama, 2002; Lausanne, 2006; Brisbane, 2008) or the International Workshops on Traffic Modeling and Simulation (Tucson, 2001; Barcelona, 2003; Sedona, 2005; Graz 2008). Yet, the only comprehensive treatment of the subject to be found so far is in the user's manuals of various software products.

High Performance Computing Heike Jagode, Hartwig Anzt, Guido Juckeland, Hatem Ltaief, 2020-10-19 This book constitutes the refereed post-conference proceedings of 10 workshops held at the 35th International ISC High Performance 2020 Conference, in Frankfurt, Germany, in June 2020: First Workshop on Compiler-assisted Correctness Checking and Performance Optimization for HPC (C3PO); First International Workshop on the Application of Machine Learning Techniques to Computational Fluid Dynamics Simulations and Analysis (CFDML); HPC I/O in the Data Center Workshop (HPC-IODC); First Workshop \Machine Learning on HPC Systems (MLHPCS); First International Workshop on Monitoring and Data Analytics (MODA); 15th Workshop on Virtualization in High-Performance Cloud Computing (VHPC). The 25 full papers included in this volume were carefully reviewed and selected. They cover all aspects of research, development, and application of large-scale, high performance experimental and commercial systems. Topics include high-performance computing (HPC), computer architecture and hardware, programming models, system software, performance analysis and modeling, compiler analysis and optimization techniques, software sustainability, scientific applications, deep learning.

Process Oriented Guided Inquiry Learning (POGIL) Richard Samuel Moog, 2008 POGIL is a student-centered, group learning pedagogy based on current learning theory. This volume describes POGIL's theoretical basis, its implementations in diverse environments, and evaluation of student outcomes.

On The Move to Meaningful Internet Systems 2003: OTM 2003 Workshops Zahir Tari, 2003-10-25 missions in fact also treat an envisaged mutual impact among them. As for the 2002 edition in Irvine, the organizers wanted to stimulate this cross-pollination with a program of shared famous keynote speakers (this year we got Sycara, - ble, Soley and Mylopoulos!), and encouraged multiple attendance by providing authors with free access to another conference or workshop of their choice. We received an even larger number of submissions than last year for the three conferences (360 in total) and the workshops (170 in total). Not only can we therefore again claim a measurable success in attracting a representative volume of scientific papers, but such a harvest allowed the program committees of course to compose a high-quality cross-section of worldwide research in the areas covered. In spite of the increased number of submissions, the Program Chairs of the three main conferences decided to accept only approximately the same number of papers for presentation and publication as in 2002 (i. e. , around 1 paper out of every 4-5 submitted). For the workshops, the acceptance rate was about 1 in 2. Also for this reason, we decided to separate the proceedings into two volumes with their own titles, and we are grateful to Springer-Verlag for their collaboration in producing these two books. The reviewing process by the respective program committees was very professional and each paper in the main conferences was reviewed by at least three referees.

Emmy Noether 1882-1935 DICK, 2012-12-06 N 1964 at the World's Fair in New York I City one room was dedicated solely to mathematics. The display included a very attractive and informative mural, about 13 feet long, sponsored by one of the largest computer manufacturing companies and presenting a brief survey of the history of mathematics. Entitled, Men of Modern Mathematics, it gives an outline of the development of that science from approximately 1000 B. C. to the year of the exhibition. The first centuries of this time span are illustrated by pictures from the history of art and, in particular, architecture; the period since 1500 is illuminated by portraits of mathematicians, including brief descriptions of their lives and professional achievements. Close to eighty portraits are crowded into a space of about fourteen square feet; among them, only one is of a woman. Her face-mature, intelligent, neither pretty nor handsome-may suggest her love of science - 1 Emmy Noether ence and creative gift, but certainly reveals a likeable personality and a genuine kindness of heart. It is the portrait of Emmy Noether (1882 - 1935), surrounded by the likenesses of such famous men as Joseph Liouville (1809-1882), Georg Cantor (1845-1918), and David Hilbert (1862 -1943). It is accompanied by the following text: Emmy Noether, daughter of the mathematician Max, was often called Der Noether, as if she were a man.

Agroforestry: Science, Policy and Practice Fergus L. Sinclair, 2013-03-09 Agroforestry research is central to developing methods for the sustainable use of natural renewable resources, evolving to address the needs of the coming century. It is now necessary to consolidate the scientific gains now being made in process-oriented research and to develop a policy framework to encourage the adoption of sustainable land use practices. Agroforestry plays an important role in conserving forest resources, reducing the need for deforestation. Further, if 'forest' is broadly defined as tree cover, agroforestry will also increase the proportion of woody biomass in farming landscapes. The papers selected for inclusion in Agroforestry: Science, Policy, and Practice establish agroforestry as an interdisciplinary science focused on the practical imperative of assisting farmers, forest dwellers and landscape-level planners to achieve sustainable food, fuel and timber production into the 21st century.

Domain Engineering Iris Reinhartz-Berger, Arnon Sturm, Tony Clark, Sholom Cohen, Jorn Bettin, 2013-08-13 Domain engineering is a set of activities intended to develop, maintain, and manage the creation and evolution of an area of knowledge suitable for processing by a range of software systems. It is of considerable practical significance, as it provides methods and techniques that help reduce time-to-market, development costs, and project risks on one hand, and helps improve system quality and performance on a consistent basis on the other. In this book, the editors present a collection of invited chapters from various fields related to domain engineering. The individual chapters present state-of-the-art research and are organized in three parts. The first part focuses on results that deal with domain engineering in software product lines. The second part describes how domain-specific languages are used to support the construction and deployment of domains. Finally, the third part presents contributions dealing with domain engineering within the field of conceptual modeling. All chapters utilize a similar terminology, which will help readers to understand and relate to the chapters content. The book will be especially rewarding for researchers and students of software engineering methodologies in general and of domain engineering and its related fields in particular, as it contains the most comprehensive and up-to-date information on this topic.
