Shot in the Dark ,2016-03-21 Wedding photographers are under tremendous pressure to capture once-in-a-lifetime moments—from the bride’s preparations, to the ceremony, to the reception and the exit. They are forced to shoot in low light in every wedding—whether in poorly lit ceremony and reception venues or, later in the day, when the peak lighting has faded. This presents myriad problems and obstacles to achieving beautiful, artfully executed images of the events of the wedding day. In this book, popular photoeducator Brett Florens and contributors provide digital photo techniques and lighting solutions—from reflectors, to LED lights, to flash—that will help you ensure that no important image is lost to poor light or exposure concerns. From choosing and using the best camera settings to scouting locations with interesting, workable light, to creating gorgeous artistic effects, this book provides the skills you need to get THE shot at every stage of the wedding and in any locale.

The Vision Revolution Mark Changizi,2010-06-08 In *The Vision Revolution: How the Latest Research Overturns Everything We Thought We Knew About Human Vision*, Mark Changizi, prominent neuroscientist and vision expert, addresses four areas of human vision and provides explanations for why we have those particular abilities, complete with a number of full-color illustrations to demonstrate his conclusions and to engage the reader. Written for both the casual reader and the science buff hungry for new information, *The Vision Revolution* is a resource that dispels commonly believed perceptions about sight and offers answers drawn from the field's most recent research. Changizi focuses on four “why questions: 1. Why do we see in color? 2. Why do our eyes face forward? 3. Why do we see illusions? 4. Why does reading come so naturally to us? Why Do We See in Color? It was commonly believed that color vision evolved to help our primitive ancestors identify ripe fruit. Changizi says we should look closer to home: ourselves. Human color vision evolved to give us greater insights into the mental states and health of other people. People who can see color changes in skin have an advantage over their color-blind counterparts; they can see when people are blushing with embarrassment, purple-faced with exertion or the reddening of rashes. Changizi's research reveals that the cones in our eyes that allow us to see color are exquisitely designed exactly for seeing color changes in the skin. And it's no coincidence that the primates with color vision are the ones with bare spots on their faces and other body parts; Changizi shows that the development of color vision in higher primates closely parallels the loss of facial hair, culminating in the near hairlessness and highly developed color vision of humans. Why Do Our Eyes Face Forward? Forward-facing eyes set us apart from most mammals, and there is much dispute as to why we have them. While some speculate that we evolved this feature to give us depth perception available through stereo vision, this type of vision only allows us to see short distances, and we already have other mechanisms that help us to estimate distance. Changizi's research shows that with two forward-facing eyes, primates and humans have an x-ray ability. Specifically, we're able to see through the cluttered leaves of the forest environment in which we evolved. This feature helps primates see their targets in a crowded, encroached environment. To see how this works, hold a finger in front of your eyes. You'll find that you're able to look “through it, at what is beyond your finger. One of the most amazing feats of two forward-facing eyes? Our views aren't blocked by our noses, beaks, etc. Why Do We See Illusions? We evolved to see moving

objects, not where they are, but where they are going to be. Without this ability, we couldn't catch a ball because the brain's ability to process visual information isn't fast enough to allow us to put our hands in the right place to intersect for a rapidly approaching baseball. "If our brains simply created a perception of the way the world was at the time light hit the eye, then by the time that perception was elicited—which takes about a tenth of a second for the brain to do—time would have marched on, and the perception would be of the recent past, Changizi explains. Simply put, illusions occur when our brain is tricked into thinking that a stationary two-dimensional picture has an element that is moving. Our brains project the "moving element into the future and, as a result, we don't see what's on the page, but what our brain thinks will be the case a fraction of a second into the future. **Why Does Reading Come So Naturally to Us?** We can read faster than we can hear, which is odd, considering that reading is relatively recent,

Shadowmancy Jason Franks, 2019-10-15 On a mountain that does not exist, there is a school where they teach the impossible. From his first day at the Academy, things have been difficult for Quay. Though he has surrendered his name, like every other acolyte at the magical school, Quay is the son of a disgraced professor, and he finds that his father's old enemies are already lined up against him—while the professor's own faction is just as suspicious. Quay refuses to take a side, but as his powers grow it becomes apparent that the damaged young boy may prove a greater threat than his father ever was. Deep in the Library of Shadows Quay finds a way to survive his father's treacherous legacy, but the price is high indeed. A mysterious and compelling read told in spookily disconnected first person narrative, delivered by a likeably unlikeable main character. A subtle and dreamlike tale. -- Sam Bowering, author of the Broken Well trilogy What happens when the ordinary and everyday is not kind? What happens when we take the hard road and make the harsh, bad choices? Shadowmancy explores this... with relish. -- Gillian Polack, author of Year of the Fruitcake

The Transition to Flexibility Daniel C. Knudsen, 1996-10-31 The advanced capitalist nations are currently undergoing an enormous economic, social, and political transformation. At the heart of this transformation is the transition between large scale, standardized production (Fordism) and new, more flexible approaches to manufacturing (flexibility), and a concomitant extension of manufacturing to include products both concrete (goods) and ephemeral (services). This volume explores the consequences of this transition from the standpoints of technology, labor relations, firm strategy, education, government programs, and geography. The book is a collection of papers by well-known scholars investigating the current global transition from mass consumption and production to flexible production for niche markets. The book is unique in that it not only discusses standard economic concerns, but also investigates the social and political implications of this transition. Each chapter is concerned with a different aspect of the same restructuring process.
