The Semantic Web: Research and Applications Asuncion Gómez-Pérez,Jerome Euzenat,2005-05-18 This volume contains the papers presented at the 2nd European Semantic Web Conference (ESWC 2005) held in Heraklion, Crete, Greece, from 29th May to 1st June, 2005. The vision of the Semantic Web is to enhance today's Web via the exploitation of machine-processable metadata. The explicit representation of the semantics of data, accompanied with domain theories (ontologies), will enable a web

that provides a qualitatively new level of service. It will weave together an - credibly large network of human knowledge and will complement it with machine processability. Various automated services will help the user to achieve goals by accessing and providing information in a machine-understandable form. This process may ultimately create extremely knowledgeable systems with various specialized reasoning services systems. Many technologies and methodologies are being developed within artificial intelligence, human language technology, machine learning, databases, software engineering and information systems that can contribute to the realization of this vision. The 2nd Annual European Semantic Web Conference presented the latest results in research and applications of Semantic Web technologies. Following the success of the first edition, ESWC showed a significant increase in participation. With 148 submissions, the number of papers doubled that of the previous edition. Each submission was evaluated by at least three reviewers. The selection process resulted in the acceptance of 48 papers for publication and presentation at the conference (an acceptance rate of 32%). Papers did not come only from Europe but also from other continents.

Melting the ice: Engaging and educational ice-breaker activities for every learning session Jen Schneider, 2023-04-14
The first five minutes of a classroom experience are critical. The tone set in a session's opening minutes can significantly impact and influence, in both positive and negative ways, the quality and nature of the subsequent learning experience. How students spend that time can also have a positive impact on their learning in both the short and long term. When the opening minutes of a class are approached as an opportunity to build student

connections, collaboration, and community, all learners benefit. As more and more learning experiences occur in synchronous and asynchronous online learning environments, strategies that both welcome students to online sessions and support student learning are increasingly important. Traditional ice breakers, while typically shared with a goal of building community and student engagement, can sometimes have unintended or even negative consequences on students. This text shares a collection of powerful, opening activities that are designed to simultaneously engage students, build safe and connected classroom communities, and support student learning. All strategies are easily adapted and personalized to fit individual course and content needs including face-to-face, synchronous online, and asynchronous online learning contexts. Shared activities are aligned with associated learning-science research and incorporate strategies that have been shown to support student engagement and learning such as retrieval practice, active recall, spaced practice, and interleaving, among other evidence-based instructional strategies.

Total Recall C. Gordon Bell, Jim Gemmell, 2009 Discusses the attempt to record an entire life digitally, an enormous undertaking requiring intense attention to detail and the development of memory-emulating technology, and the implications of this research.

Online Searching Karen Markey, Cheryl Knott, 2023 Online Searching puts aspiring librarians working in all types of institutions on the fast track to becoming expert searchers, the intermediaries who unite information users with trusted sources that satisfy their information needs.

Electronic Resume Revolution Joyce Lain Kennedy, Thomas J. Morrow, 1994 Answers such questions about writing resumes as: Electronics is in. Is paper out? What are the keywords at the center of the new resume? Now that computers read and evaluate resumes, is it still useful to personalize mine? How do I perform

my resume in front of a video camera?

Readings in Information Retrieval Karen Sparck Jones, Peter Willett, 1997 This compilation of original papers on information retrieval presents an overview, covering both general theory and specific methods, of the development and current status of information retrieval systems. Each chapter contains several papers carefully chosen to represent substantive research work that has been carried out in that area, each is preceded by an introductory overview and followed by supported references for further reading.

Big Data Zongben Xu, Xinbo Gao, Qiguang Miao, Yunquan Zhang, Jiajun Bu, 2018-10-10 This volume constitutes the proceedings of the 6th CCF Conference, Big Data 2018, held in Xi'an, China, in October 2018. The 32 revised full papers presented in this volume were carefully reviewed and selected from 880 submissions. The papers are organized in topical sections on natural language processing and text mining; big data analytics and smart computing; big data applications; the application of big data in machine learning; social networks and recommendation systems; parallel computing and storage of big data; data quality control and data governance; big data system and management.

Keyword Search in Databases Jeffrey Xu Yu, Lijun Chang, Lu Qin, 2022-06-01 It has become highly desirable to provide users with flexible ways to query/search information over databases as simple as keyword search like Google search. This book surveys the recent developments on keyword search over databases, and focuses on finding structural information among objects in a database using a set of keywords. Such structural information to be returned can be either trees or subgraphs representing how

the objects, that contain the required keywords, are interconnected in a relational database or in an XML database. The structural keyword search is completely different from finding documents that contain all the user-given keywords. The former focuses on the interconnected object structures, whereas the latter focuses on the object content. The book is organized as follows. In Chapter 1, we highlight the main research issues on the structural keyword search in different contexts. In Chapter 2, we focus on supporting structural keyword search in a relational database management system using the SQL query language. We concentrate on how to generate a set of SQL queries that can find all the structural information among records in a relational database completely, and how to evaluate the generated set of SQL queries efficiently. In Chapter 3, we discuss graph algorithms for structural keyword search by treating an entire relational database as a large data graph. In Chapter 4, we discuss structural keyword search in a large tree-structured XML database. In Chapter 5, we highlight several interesting research issues regarding keyword search on databases. The book can be used as either an extended survey for people who are interested in the structural keyword search or a reference book for a postgraduate course on the related topics. Table of Contents: Introduction / Schema-Based Keyword Search on Relational Databases / Graph-Based Keyword Search / Keyword Search in XML Databases / Other Topics for Keyword Search on Databases

Total Recall Sara Paretsky, 2002-10-29 NEW YORK TIMES BESTSELLER • “A spectacular mystery—complex, fast-paced yet ruminative, and imbued with the grim awareness, shared by all intelligent hard-boiled novels, that the past always catches up with us . . . a thrilling and even moving mystery.”—The Washington Post Book World V.I.’s journey begins with a national conference in downtown Chicago, where angry protesters are calling for the recovery of Holocaust assets. Replayed on the evening news is the scene of a slight man who has stood up at the conference to tell an astonishing story of a childhood shattered by the Holocaust — a story that has devastating consequences for V.I.’s cherished friend and mentor, Lotty Herschel. Lotty was a girl of nine when she emigrated from Austria to England, one of a group of children wrenched from their parents and saved from the Nazi terror just before the war broke out. Now stunningly—impossibly—it appears that someone from that long-lost past may have returned. With the help of a recovered-memory therapist, Paul Radbuka has recently learned his true identity. But is he who he claims to be? Or is he a cunning impostor who has usurped someone else’s history . . . a history Lotty has tried to forget for over fifty years? As a frightened V.I. watches her friend unravel, she sets out to help in the only way she can: by investigating Radbuka’s past. Already working on a difficult case for a poor family cheated of their life insurance, she

tries to balance Lotty's needs with her client's, only to find that both are spiraling into a whirlpool of international crime that stretches from Switzerland and Germany to Chicago's South Side. As the atrocities of the past reach out to engulf the living, V.I. struggles to decide whose memories of a terrible war she can trust, and moves closer to a chilling realization of the truth—a truth that almost destroys her oldest friend.

Advanced Principles for Improving Database Design, Systems Modeling, and Software Development Siau, Keng, Erickson, John, 2008-11-30 This book presents cutting-edge research and analysis of the most recent advancements in the fields of database systems and software development--Provided by publisher.

Made to Measure Philip Ball, 1999-10-03 This text describes how scientists are inventing thousands of materials, ranging from synthetic skin, blood and bone, to substances that repair themselves and adapt to their environment. It outlines how newly-invented materials will transform our lives in the 21st century.

Soft Computing for Data Mining Applications K. R. Venugopal, K. G. Srinivasa, L. M. Patnaik, 2009-02-24 The authors have consolidated their research work in this volume titled Soft Computing for Data Mining Applications. The monograph gives an insight into the research in the fields of Data Mining in combination with Soft Computing methodologies. In these days, the data continues to grow - exponentially. Much of the data is implicitly or explicitly imprecise. Database discovery seeks to discover noteworthy, unrecognized associations between the data items in the existing database. The potential of discovery comes from the realization that alternate contexts may reveal additional valuable information. The rate at which the data is stored is growing at a phenomenal rate. As a result, traditional ad hoc mixtures of statistical techniques and data management tools are no longer adequate for analyzing this vast collection of data.

Several domains where large volumes of data are stored in centralized or distributed databases include applications like electronic commerce, bio-informatics, computer security, Web intelligence, intelligent learning database systems, finance, marketing, healthcare, telecommunications, and other fields. Efficient tools and algorithms for knowledge discovery in large data sets have been devised during the recent years. These methods exploit the capability of computers to search huge amounts of data in a fast and effective manner. However, the data to be analyzed is imprecise and affected with uncertainty. In the case of heterogeneous data sources such as text and video, the data might moreover be ambiguous and partly conflicting. Besides, patterns and relationships of interest are usually approximate. Thus, in order to make the information mining process more robust it requires tolerance toward imprecision, uncertainty and exceptions.

Handbook of Research on E-Business Standards and Protocols: Documents, Data and Advanced Web Technologies
 Kajan, Ejub, 2012-02-29 Electronic business is a major force shaping the digital world. Yet, despite of years of research and standardization efforts, many problems persist that prevent e-business from achieving its full potential. Problems arise from different data vocabularies, classification schemas, document names, structures, exchange formats and their varying roles in business processes. Non-standardized business terminology, lack of common acceptable and understandable processes (grammar), and lack of common dialog rules (protocols) create barriers to improving electronic business processes. *Handbook of Research on E-Business Standards and Protocols: Documents, Data and Advanced Web Technologies* contains an overview of new achievements in the field of e-business standards and protocols, offers in-depth analysis of and research on the development and deployment of cutting-edge applications, and provides insight into

future trends. This book unites new research that promotes harmony and agreement in business processes and attempts to choreograph business protocols and orchestrate semantic alignment between their vocabularies and grammar. Additionally, this Handbook of Research discusses new approaches to improving standards and protocols, which include the use of intelligent agents and Semantic Web technology.
