Computers in the Human Interaction Loop Alexander Waibel, Rainer Stiefelhagen, 2009-04-05 This book integrates a wide range of research topics related to and necessary for the development of proactive, smart, computers in the human interaction loop, including the development of audio-visual perceptual components for such environments; the design, implementation and analysis of novel proactive perceptive services supporting humans; the development of software architectures, ontologies and tools necessary for building such environments and services, as well as approaches for the evaluation of such technologies and services. The book is based on a major European Integrated Project, CHLI (Computers in the Human Interaction Loop), and throws light on the paradigm shift in the area of HCI that rather than humans interacting directly with machines, computers should observe and understand human interaction, and support humans during their work and interaction in an implicit and proactive manner.

Assistive Technologies for People with Diverse Abilities Giulio E. Lancioni, Nirbhay N. Singh, 2014-01-07 The familiar image of the disabled tends to emphasize their limitations and reduced quality of life. However, many people with cognitive, motor, and other difficulties also have the capacity to enhance their social interactions, leisure pursuits and daily activities with the aid of assistive technology. Assistive devices from the simple to the sophisticated, have become essential to intervention programs for this population. And not surprisingly the numbers of devices available are growing steadily. Assistive Technologies for People with Diverse Abilities offers expert analysis of pertinent issues coupled with practical discussion of solutions for effective support. Its comprehensive literature review describes current and emerging devices and presents evidence-based guidelines for matching promising technologies to individuals. Program outcomes are assessed, as are their potential impact on the future of the field. In addition, chapters provide detailed descriptions of the personal and social needs of the widest range of individuals with congenital and acquired conditions, including: Acquired brain damage. Communication impairment. Attention and learning difficulties (with special focus on college students). Visual impairment and blindness. Autism spectrum disorders. Behavioral and occupational disorders. Alzheimer's disease. Severe, profound and multiple impairments. The scope and depth of coverage makes Assistive Technologies for People with Diverse Abilities an invaluable resource for researchers, professionals and graduate students in developmental psychology, rehabilitation medicine, educational technology, occupational therapy, speech pathology and clinical psychology.

Mobile Devices and Smart Gadgets in Human Rights Umair, Sajid, Shah, Muhammad Yousaf, 2018-10-12 In recent years, technology has permeated every aspect of daily life and has drastically increased accessibility and empowerment for all demographics. Smart technologies and mobile applications now have the ability to promote and protect the basic rights of children, women, and men alike. A child's right to education and mental growth or a woman's socio-economic stability and protection from physical, sexual, and emotional abuse can all be attributed to these advancements. Mobile Devices and Smart Gadgets in Human Rights provides emerging research exploring the theoretical and practical applications of technology in relation to human ethical treatment and interactions. Featuring coverage on a broad range of topics such as public safety, augmented reality, and safety apps, this book is ideally designed for researchers, students, activists, academicians, policymakers, and government officials seeking current research on the influence of portable technologies in human rights and ethics.

The Witches of Karres James H. Schmitz, 2001-11-01 NO GOOD DEED GOES UNPUNISHED . . . Captain Pausert thought his luck had finally turned¾but he did not yet realize it was a turn for the worse. On second thought, make that a turn for the disastrous*. Unlucky in love, unsuccessful in business, he thought he had finally made good with his battered starship Venture, cruising around the fringes of the Empire and successfully selling off odd-ball cargoes which no one else had been able to sell. He was all set to return home, where his true love was faithfully waiting for him ... he hoped. But then he made the fatal mistake of freeing three slave children from their masters (who were suspiciously eager to part with them). They were just trying to be helpful, but those three adorable little girls quickly made Pausert the mortal enemy of his fiancée, his home planet, the Empire, warlike Sirians, psychopathic Uldanians, the dread pirate chieftain Laes Yango¾and even the Worm World, the darkest threat to mankind in all of space. And all because those harmless-looking little girls were in fact three of the notorious and universally feared Witches of Karres. A rollicking novel from the master of space adventure. At the publisher's request, this title is sold without DRM (Digital Rights Management).

Outsmarting Autism, Updated and Expanded Patricia S. Lemer,2019-03-19 Nautilus Award Winner, 2019--Silver in Parenting & Family A comprehensive resource for parents, therapists, caregivers, and educators, packed with lifelong strategies for Autism Spectrum Disorder (ASD) management and support Newly revised and updated, this user-friendly guide addresses autism identification, treatment, and prevention from pre-conception through adulthood. Outsmarting Autism describes more than 50 practical approaches with proven efficacy, including lifestyle modification, dietary considerations, and boosting the immune system. After health improves, focus turns to developing the sensory foundations for communication, social skills, and learning. Patricia Lemer's approach is grounded in research on multifactorial causes, or Total Load Theory, which explains that developmental delays are caused not by one single factor, but by an overload of environmental stressors on genetically vulnerable individuals. Because every person with autism is unique, this book guides readers to the therapies that may be right for each individual, helping to make the difference between management and healing. New research on topics like stem cells, cannabis, and dentistry is now included.

Curricula for Students with Severe Disabilities Phyllis Jones,2017-03-16 Students with severe disabilities comprise 2 percent of the population of learners who are impacted by intellectual, communicative, social, emotional, physical, sensory and medical issues. Increasingly, however, teachers are required to meet the challenges of creating a pedagogical balance between an individual student's strengths, needs and preferences, and core academic curricula. The need to embrace the current initiative of curriculum state standards in the debate of curricula relevance, breadth, balance and depth for students with severe disabilities is not just timely—it contributes to the evolving debate of what constitutes an appropriate curriculum for severely disabled learners. Curricula for Students with Severe Disabilities supports the development of greater understandings of the role that state curriculum standards play in the pedagogical decision-making for students with severe intellectual disabilities. The book first discusses the nature and needs of these students, the curriculum for this group of learners and the recent contributions of state curriculum standards, before presenting narratives of real classrooms, teachers and students who have meaningfully integrated state curriculum standards at the kindergarten, elementary and high school levels.

We Generation Michael Ungar,2011-05-18 Engaging and timely, this book is an invaluable resource for parents who want their children to become socially responsible and globally aware adults As youth culture seems to grow more self-centred and obsessed with Me,Michael Ungar shows us that, in fact, children today are as willing as ever to think We. Given the right signals, and some important changes to the homes we live in, our schools and communities, kids will seek out close connections with the adults in their lives. Like generations before them, they want to be noticed for the contributions they can make. What they need, though, is compassion and encouragement from parents, and some careful attention to their most important connections, those made at home. Combining inspiring stories taken from his clinical work with families and children with expert research gathered from around the world, Ungar reveals how the close connections kids crave, and the support adults provide, can help kids realize their full potential - and how it can also protect them from the dangers of delinquency, whether it be drug abuse, violence, or early sexual activity. At a time when global issues and activism have come to the forefront, We Generation offers a fresh, optimistic way of thinking about our children’s true nature and potential.
