The Joy of Geocaching Paul Gillin, Dana Gillin, 2010 Ten years ago, it didn't exist. Now it's the most popular new outdoor game of the 21st century, played by millions of people in over 100 countries around the world. It's Geocaching--the GPS-powered global treasure hunt game, where players seek out hidden geocaches in some of the world's most spectacular locations, in urban streets, and even in your own home town. The Joy of Geocaching is your complete guide to setting off on your own exciting geocaching adventure, with plain-English instructions on getting started in the game--plus advanced secrets from the world's most expert geocachers! The Joy of Geocaching also takes you into the human side of the game, with wonderful stories about how the pursuit of hidden treasure has helped people heal frayed marriages, establish new friendships, and even save lives. Geocaching is more than just a game--it's a life-changing force that reconnects people with their planet, their families and themselves. Rediscover the joy of the outdoors with The Joy of Geocaching! Book jacket.

Formal Methods - Fun for Everybody Antonio Cerone, Markus Roggenbach, 2021-03-10 This volume constitutes the post-workshop proceedings of the First International Workshop on Formal Methods - Fun for Everybody, FMFun 2019, held in Bergen, Norway, in December 2019. The 7 revised full papers and 2 revised short papers presented in this volume were carefully reviewed and selected from 15 submissions. A white paper and two keynote papers are also included. The papers explore ways of utilizing the pathway to transforming and spreading formal methods. The vision of this workshop series is that formal methods ought to be taught in such a way that every student can have fun with it.

Entertainment Computing - ICEC 2011 Junia Anacleto, Sidney Fels, Nicholas Graham, Bill Kapralos, Magy Seif El-Nasr, Kevin Stanley, 2011-09-23 This book constitutes the refereed proceedings of the 10th International Conference on Entertainment Computing, ICEC 2011, held in Vancouver, Canada, in October 2011, under the auspices of IFIP. The 20 revised long papers, 18 short papers and 24 poster papers and demos presented were carefully reviewed and selected from 94 initial submissions. The papers cover all main domains of entertainment computing, from interactive music to games, taking a wide range of scientific domains from aesthetic to computer science. The papers are organized in topical sections on story, active games, player experience, camera and 3D, educational entertainment, game development, self and identity, social and mobile entertainment; plus the four categories: demonstrations, posters, workshop, and tutorial.

Geocaching with a Garmin GPS a Treasure Hunting Adventure Paul Scime, 2010-11 By logging into a geocaching Web site, anyone can locate the coordinates to find a geocache, a hidden container holding a logbook and trade items. Scime show how to start a geocaching adventure with or without the use of a GPS.

The City at Eye Level Meredith Glaser, 2012 Although rarely explored in academic literature, most inhabitants and visitors interact with an urban landscape on a day-to-day basis is on the street level. Storefronts, first floor apartments, and sidewalks are the most immediate and common experience of a city. These "plinths" are the ground floors that negotiate between inside and outside, the public and private spheres. The City at Eye Level qualitatively evaluates plinths by exploring specific examples from all over the world. Over twenty-five experts investigate the design, land use, and road and foot traffic in rigorously researched essays, case studies, and interviews. These pieces are supplemented by over two hundred beautiful color images and engage not only with issues in design, but also the concerns of urban communities. The editors have put together a

comprehensive guide for anyone concerned with improving or building plinths, including planners, building owners, property and shop managers, designers, and architects.

Wearable Sensors Edward Sazonov, Michael R Neuman, 2014-08-14 Written by industry experts, this book aims to provide you with an understanding of how to design and work with wearable sensors. Together these insights provide the first single source of information on wearable sensors that would be a valuable addition to the library of any engineer interested in this field. Wearable Sensors covers a wide variety of topics associated with the development and application of various wearable sensors. It also provides an overview and coherent summary of many aspects of current wearable sensor technology. Both industry professionals and academic researchers will benefit from this comprehensive reference which contains the most up-to-date information on the advancement of lightweight hardware, energy harvesting, signal processing, and wireless communications and networks. Practical problems with smart fabrics, biomonitoring and health informatics are all addressed, plus end user centric design, ethical and safety issues. Provides the first comprehensive resource of all currently used wearable devices in an accessible and structured manner. Helps engineers manufacture wearable devices with information on current technologies, with a focus on end user needs and recycling requirements. Combines the expertise of professionals and academics in one practical and applied source.

Location Based Services and TeleCartography Georg Gartner, William Cartwright, Michael P Peterson, 2007-04-27 This book provides for the first time a general overview of research activities related to location and map-based services. These activities have emerged over the last years, especially around issues of positioning, spatial modelling, cartographic communication as well as in the fields of ubiquitous cartography, geo-pervasive services, user-centered modelling and geo-wiki activities. The innovative and contemporary character of these topics has lead to a great variety of interdisciplinary contributions, from academia to business, from computer science to geodesy. Topics cover an enormous range with heterogeneous relationships to the main book issues. Whilst contemporary cartography aims at looking at new and efficient ways for communicating spatial information the development and availability of technologies like mobile networking, mobile devices or short-range sensors lead to interesting new possibilities for achieving this aim. By trying to make use of available technologies, cartography and a variety of related disciplines look specifically at user-centered and context-aware system development, as well as new forms of supporting wayfinding and navigation systems. Contributions are provided in five main sections and they cover all of these aspects and give a picture of the new and expanding field of Location Based Services and TeleCartography. discipline resulting from the integration of mobile computing with wired and wireless communications, geoinformatics (including GIS and GPS), and remote sensing techniques and technologies. Users of telegeoinformatics from every field will need a comprehensive reference to solve multiple types of problems involving locat

Exertion Games Florian Mueller,Rohit Ashok Khot,Kathrin Gerling,Regan Mandryk,2016-12-28 Advances in human-computer interaction (HCI) technologies have led to emerging computer game systems that foster physical exertion as part of the interaction. This book provides an overview of existing work in the area, outlines a spectrum of exertion games, and presents an analysis of key enabling technologies.

Staged Experiences Arthur Maria Stein,Ana Penjak,Celia Morgan,2019-01-04

Map-Based Mobile Services Liqiu Meng,Alexander Zipf,2005 The book is divided into three parts: theory, method and implementation. Starting with a summary of the state-of-the-art in mobile technologies, the first part analyses their impacts on cartography and pinpoints the missing theories concerned with the development of map-based mobile services. A conceptual framework of mobile cartography is then introduced with the emphasis on mobile usage context. The second part is devoted to the design methodology under the constraints defined in the theoretical framework. A core issue deals with personalised mobile map services. The final part demonstrates the feasibility of the methods by using application scenarios. The accompanying CD-ROM contains the PDF-Files in colour.

Applications of Location Analysis H. A. Eiselt,Vladimir Marianov,2015-09-22 This book, companion to Foundations of Location Analysis (Springer, 2011), highlights some of the applications of location analysis within the spheres of businesses, those that deal with public services and applications that deal with law enforcement and first responders. While the Foundations book reviewed the theory and first contributions, this book describes how different location techniques have been used to solve real problems. Since many real problems comprise multiple objectives, in this book there is more presence of tools from multicriteria decision making and multiple-objective optimization. The section on business applications looks at such problems as locating bank branches, the potential location of a logistics park, sustainable forest management and layout problems in a hospital, a much more difficult type of problem than mere location problems. The section on public services presents chapters on the design of habitats for wildlife, control of forest fires, the location of intelligent sensors along highways for timely emergency response, locating breast cancer screening centers, an economic analysis for the locations of post offices and school location. The final section of the book includes chapters on the well-known problem of locating fire stations, a model for the location of sensors for travel time information, the problem of police districting, locations of jails, location of Coast Guard vessels and finally, a survey of military applications of location analysis throughout different periods of recent history.

Designing a More Inclusive World Simeon Keates,John Clarkson,Patrick Langdon,Peter Robinson,2012-12-06 Designing inclusively is no longer an option for companies. It is a business essential. Global populations are getting older, legislation is increasingly prohibitive of unnecessary exclusion and consumer attitudes are beginning to change. Exclusivity is out, inclusivity is in. Research communities the world over are responding to this change in design emphasis. Conferences such as the Cambridge Workshops on Universal Access and Assistive Technology (CWUAAT) offer a forum for researchers from diverse and varied disciplines to bring their perspectives on inclusive

design together. This book has been inspired by the second CWUAAT, held in Cambridge, England in March 2004. It contains chapters from an international group of leading researchers in this field. Contributions focus on the following topics: design issues for universal access and assistive technology; enabling computer access and new technologies; and, assistive technology and rehabilitation robotics. This series of conferences is aimed at a broad range of interests, with a general focus on the development of products and solutions. Numerous case studies are used to raise awareness of the challenges faced in developing truly inclusive products, along with examples of good practice for design for a more inclusive world.

Pervasive Games Markus Montola, Jaakko Stenros, Annika Waern, 2009-06-12 Games are no longer confined to card tables and computer screens. Emmy award winning games like *The Fallen Alternate Reality Game* (based on the ABC show) or *The Lost Experience* (based on the CBS hit show)- are pervasive games in that they blur traditional boundaries of game play. This book gives game designers the tools they need to create cutting edge pervasive games.

The Game Design Reader Katie Salen Tekinbas, Eric Zimmerman, 2005-11-23 Classic and cutting-edge writings on games, spanning nearly 50 years of game analysis and criticism, by game designers, game journalists, game fans, folklorists, sociologists, and media theorists. *The Game Design Reader* is a one-of-a-kind collection on game design and criticism, from classic scholarly essays to cutting-edge case studies. A companion work to Katie Salen and Eric Zimmerman's textbook *Rules of Play: Game Design Fundamentals*, *The Game Design Reader* is a classroom sourcebook, a reference for working game developers, and a great read for game fans and players. Thirty-two essays by game designers, game critics, game fans, philosophers, anthropologists, media theorists, and others consider fundamental questions: What are games and how are they designed? How do games interact with culture at large? What critical approaches can game designers take to create game stories, game spaces, game communities, and new forms of play? Salen and Zimmerman have collected seminal writings that span 50 years to offer a stunning array of perspectives. Game journalists express the rhythms of game play, sociologists tackle topics such as role-playing in vast virtual worlds, players rant and rave, and game designers describe the sweat and tears of bringing a game to market. Each text acts as a springboard for discussion, a potential class assignment, and a source of inspiration. The book is organized around fourteen topics, from *The Player Experience* to *The Game Design Process*, from *Games and Narrative* to *Cultural Representation*. Each topic, introduced with a short essay by Salen and Zimmerman, covers ideas and research fundamental to the study of games, and points to relevant texts within the Reader. Visual essays between book sections act as counterpoint to the writings. Like *Rules of Play*, *The Game Design Reader* is an intelligent and playful book. An invaluable resource for professionals and a unique introduction for those new to the field, *The Game Design Reader* is essential reading for anyone who takes games seriously.

GeoSensor Networks Silvia Nittel, Alexandros Labrinidis, Anthony Stefanidis, 2008-08-15 This volume serves as the post-conference proceedings for the Second GeoSensor Networks Conference that was held in Boston, Massachusetts in October 2006. The conference addressed issues related to the collection, management, processing, analysis, and delivery of real-time geospatial data using distributed geosensor networks. This represents an evolution of the traditional static and centralized geocomputational paradigm, to support the collection of both temporally and spatially high-resolution, up-to-date data over a broad geographic area, and to use sensor networks as actuators in geographic space. Sensors in these environments can be static or mobile, and can be used to passively collect information about the environment or, eventually, to actively influence it. The research challenges behind this novel paradigm extend the

frontiers of traditional GIS research further into computer science, addressing issues like data stream processing, mobile computing, location-based services, temporal-spatial queries over geosensor networks, adaptable middleware, sensor data integration and mining, automated updating of geospatial databases, VR modeling, and computer vision. In order to address these topics, the GSN 2006 conference brought together leading experts in these fields, and provided a three-day forum to present papers and exchange ideas.
