CUSTOMER RELATIONSHIP MANAGEMENT S. SHANMUGASUNDARAM, 2008-04-15 Customer Relationship Management (CRM) is a modern approach to marketing. It focuses on the individual consumer. Customer is the 'king', therefore, the products and services have to be offered in such a way that they suit the needs and preferences of the customer. This comprehensive and easy-to-read text deals with the formulation of methodologies and tools that help business organizations to manage critical customer relationships by supporting all customer-centric processes within an enterprise, including marketing, sales and customer support. In addition, the book emphasizes managing opportunity for optimum productivity, coordinating the specialized activities of multi-functional teams, developing and retaining corporate knowledge and completing complex multi-step processes in a timely and efficient manner. This text is intended for the students of masters in business administration (MBA) and those pursuing postgraduate diploma in marketing management (PGDMM). Besides, the book should prove to be a useful reference for marketing professionals. **KEY FEATURES** □ Covers various dimensions of CRM with several case studies. □ Includes the modern concept—e-CRM. □ Incorporates deep study of research oriented topics.

Advances in SIIoT (Social Internet of Things) Gururaj H L, Pramod H B, Gowtham M, 2023-04-19 The Social Internet of Things (SIIoT) has become a hot topic in academic research. It employs the theory of social networks into the different levels of the Internet of Things (IIoTs) and has brought new possibilities for the development of IIoTs. Essentially, the SIIoT is a subset of IIoTs. It uses intelligent hardware and humans as the node, a social network as the organization type, the social relationship between things, things and humans, and between humans, formatting research methods and models with social network characteristics to realize the connection, service, and application of the IIoTs. Moreover, SIIoT is a form of realization of technology, architecture, and application of the IIoTs using social network research methods. It further promotes the integration between real-world and virtual cyberspace, contributes the realization of the IIoTs, expands the research scope of the social networking, and provides a new solution for the specific problems of the IIoTs. Consequently, there is a tremendous need for researchers to have a comprehensive knowledge of the advances in SIIoT. This special issue is soliciting scientific research papers that can present a snapshot of the latest research status of SIIoT.

Managing in Recovering Markets S. Chatterjee,N.P. Singh,D.P. Goyal,Narain Gupta,2014-10-27 The changing dynamics of business worldwide have led organizations to look beyond traditional managerial practices while at the same time attempting to retain their core competitive advantages. This development has called upon academicians and practitioners alike to reassess the different aspects of business management such as macroeconomic variables, the nature of the market, the changing features of the workplace, the new work ethos, and/or employer-employee exchanges. In this context, the book provides essential insights on industry innovations, academic advances and policy movements with regard to recovering markets in India and around the globe. The individual papers highlight potential avenues that could allow industry to better understand and respond to the global crisis. The book collects research papers presented at the Global Conference on Managing in Recovering Markets (GCMRM), held in March 2014. Seven international and 120 national business schools and management universities were represented at the conference, the first in a series of 13 planned under the GCMRM agenda for 2014–17. The book includes more than 30 research papers chosen from a pool of 118 presented at the conference, all of which have undergone a rigorous blind review process.

Mobile Messaging Technologies and Services Gwenaël Le Bodic,2003-06-13 Mobile messaging is practically the first data communication service in the wireless domain. It is a major advance on the conventional practice of providing only voice communication service over the wireless interface. Thus, mobile messaging is the initial step to bring the Internet to wireless terminals and has considerable importance both for mobile communication and the Internet. Mobile Messaging provides an in-depth description of messaging technologies supported by mobile networks. It covers the Short Message Service (SMS), Enhanced Messaging Service (EMS) through to the more complex and emerging Multimedia Messaging Service (MMS). The Short Message System (SMS) has proved to be incredibly popular and is supported by most GSM, TDMA and CDMA mobile networks. This volume focuses on the Short Message Service introduced by the European Telecommunications Standard Institute (ETSI) for GSM and GPRS networks. On the basis of ETSI standard, the 3rd Generation Partnership Project (3GPP) is currently the organisation responsible for maintaining

the SMS technical specifications. In its most basic form, the Short Messaging Service allows users to exchange short messages composed of a limited amount of text and it is expected that up to 100 Billion short messages could be exchanged monthly by the end of 2002. The Enhanced Message Service (EMS), an application-level extension of SMS, supersedes basic SMS features by allowing elements such as images, animations, formatted text and monophonic melodies to be inserted in short or concatenated messages. Recently, the 3GPP has been focusing on the development of the Multimedia Message Service (MMS). MMS features include the exchange of messages containing polyphonic melodies, large images, video elements sometimes organised with a multimedia presentation language such as SMIL or XHTML. MMS will be supported by 2.5 G and 3G networks. MMS specifications have reached a fairly mature stage and MMS commercial solutions are appearing on the market. Unlike EMS, MMS has been specified by the 3GPP as a service independent from the underlying network technologies. In parallel to the 3GPP standardisation process, other organisations have specified network-specific implementations of MMS such as the WAP implementation defined by the WAP Forum. In order to develop applications using Short, Enhanced and Multimedia messaging technologies, engineers have to become familiar with the use of technical specifications produced by various standard development organisations such as the 3GPP, the WAP Forum and the IETF and this is the first book to pull this vast array of material together. * Provides an in depth description of the different messaging services and messaging technologies * Presents an introduction to mobile networks * Features numerous practical implementation examples * Provides a unique easy-to-follow presentation of messaging services and mobile networks within a single publication Essential reading for content providers, service providers, network operators and telecommunications manufacturers, researchers, postgraduate students, marketing and standardisation personnel.

How to Build an SMS Service Jordan Schwartz,Brian Retford,2007-06-21 The simple text message application that appears on virtually all mobile phones is the ultimate thin client, allowing your users access to the full computing power and informational depth of the Internet from a cheap cell phone on a mountaintop. Building an SMS service can be quite simple. This tutorial guides you through a variety of implementations, giving you the information you need to choose one that best fits your unique needs and circumstances. More than that, though, it seeks to help you understand the core principles necessary to make your service a success.
