Geographic Information Systems for Transportation Harvey J. Miller,Shih-Lung Shaw,2001 GIS data and tools are revolutionizing transportation research and decision making, allowing transportation analysts and professionals to understand and solve complex transportation problems that were previously impossible. Here, Miller and Shaw present a comprehensive discussion of fundamental geographic science and the applications of these principles using GIS and other software tools. By providing thorough and accessible discussions of transportation analysis within a GIS environment, this volume fills a critical niche in GIS-T and GIS literature.

Web 2.0 Andrew A. Kling,2010-12-17 Readers will be introduced to Web 1.0 and the story of its evolution to 2.0. This book discusses the role of news, information, and social networks. Mashing, memes, and other activities are explored. Lastly, readers will take a look at the future beyond Web 2.0.

Freeway Traffic State Detection Using CCTV Stationary Images ,2012 Traffic detection and data collection are essential to transportation planning and management. The CCTV (Closed Circuit Television) traffic cameras have been increasingly deployed for traffic surveillance on major roadways by DOT (Department of Transportation) in the U.S. However, the real-time traffic video data is still very limited to be published online because of the large load to the video servers and internet connections. As a result, the traffic snapshots which are clipped from the video data are widely used as an effective approach to publish the real-time traffic conditions through internet. Currently, almost all U.S. states can provide traffic snapshots via DOT or traveler information websites (511 System). These traffic snapshots are published and updated every 1 minute to 5 minutes in different states. They are potential new traffic data source that can be obtained free from internet without additional equipment and instruction cost. They can provide valuable traffic information to analyze traffic flow patterns and congestion status, where no other detectors are available. How to utilize these online CCTV snapshots effectively for traffic detection and data collection would be of practical significance. In this research, a novel traffic state detection model is developed, which could contribute to both academic and industry fields. The primary contribution of this study is to provide an effective solution to detect the traffic state using the CCTV stationary images. Traffic space occupancy is used as a reliable measure for quantitative traffic analysis and congestion estimation. The practical value of the proposed approach is that it turns widely freely available video source from internet into useful traffic information, and this could be done without interfering the existing CCTV system in DOT. The traffic image data used in this study were collected from I-894 freeway corridor in Milwaukee, Wisconsin. I proposed a model to measure the traffic space occupancy, which could not be measured directly in the field. In addition, a perspective transformation method is provided to estimate the traffic parameters without accurate camera calibration. The proposed algorithms and image processing

were implemented in MATLAB. The model validation is performed with field loop detector data collected from the same roadway segments. The model performance was evaluated under different traffic status, illumination conditions, and roadway geometry. The validation and evaluation results indicate that the proposed model has a robust detecting capability for traffic status.

Automated Secure Computing for Next-Generation Systems Amit Kumar Tyagi, 2023-11-16
AUTOMATED SECURE COMPUTING FOR NEXT-GENERATION SYSTEMS This book provides cutting-edge chapters on machine-empowered solutions for next-generation systems for today's society. Security is always a primary concern for each application and sector. In the last decade, many techniques and frameworks have been suggested to improve security (data, information, and network). Due to rapid improvements in industry automation, however, systems need to be secured more quickly and efficiently. It is important to explore the best ways to incorporate the suggested solutions to improve their accuracy while reducing their learning cost. During implementation, the most difficult challenge is determining how to exploit AI and ML algorithms for improved safe service computation while maintaining the user's privacy. The robustness of AI and deep learning, as well as the reliability and privacy of data, is an important part of modern computing. It is essential to determine the security issues of using AI to protect systems or ML-based automated intelligent systems. To enforce them in reality, privacy would have to be maintained throughout the implementation process. This book presents groundbreaking applications related to artificial intelligence and machine learning for more stable and privacy-focused computing. By reflecting on the role of machine learning in information, cyber, and data security, Automated Secure Computing for Next-Generation Systems outlines recent developments in the security domain with artificial intelligence, machine learning, and privacy-preserving methods and strategies. To make computation more secure and confidential, the book provides ways to experiment, conceptualize, and theorize about issues that include AI and machine learning for improved security and preserve privacy in next-generation-based automated and intelligent systems. Hence, this book provides a detailed description of the role of AI, ML, etc., in automated and intelligent systems used for solving critical issues in various sectors of modern society. Audience Researchers in information technology, robotics, security, privacy preservation, and data mining. The book is also suitable for postgraduate and upper-level undergraduate students.

Nuclear Nightmare Robert F. Lucht, 2016-03-24 A wealthy Iranian family, committed to Jihad, is building atomic bombs in the United States and placing them in the downtown districts of some of our major cities. The Iranians employ hundreds of people in cities all across the United States to develop the very devices that can eventually kill them. None of these people know exactly what they are doing, they are only providing parts that have a number of uses. The plot covers three continents, and involves numerous subplots. The CIA knows something is going on, but does not know how, who or where this is taking place. The bombs are all set on sophisticated timers that will automatically detonate the devices the first workday after New Years and destroy our largest cities. Follow the story as the Iranians buy and lease properties, build facilities to enrich uranium, fabricate the devices and place them in the heart of American cities. Follow along and a special task force attempts to unravel the plot, and stop the destruction of America. When

January 3 comes around will America be dealt a crippling blow, or will it just be another workday?

Web Site Design is Communication Design Thea M. van der Geest, 2001-11-30
Web Site Design is Communication Design is written for practitioners, trainers, and students of Communication, Business, Information Science and Media Design. This book is based on a series of case studies of web-site design processes in smaller and larger organizations, including Amazon and Microsoft. It offers a well-researched, reflective and thorough analysis of the activities undertaken, in combination with practical, real-life experiences of web-site designers and producers. It pays attention to the often complicated organizational context that web designers and producers have to work in, while they serve both bosses and target groups to their best intents. The importance of careful evaluation is stressed throughout the book and in the concluding checklists, which guide the practitioner through the design process, from initial idea through site maintenance and re-design.

Spying with Maps Mark Monmonier, 2002-11-15
Maps, as we know, help us find our way around. But they're also powerful tools for someone hoping to find you. Widely available in electronic and paper formats, maps offer revealing insights into our movements and activities, even our likes and dislikes. In *Spying with Maps*, the mapmatician Mark Monmonier looks at the increased use of geographic data, satellite imagery, and location tracking across a wide range of fields such as military intelligence, law enforcement, market research, and traffic engineering. Could these diverse forms of geographic monitoring, he asks, lead to grave consequences for society? To assess this very real threat, he explains how geospatial technology works, what it can reveal, who uses it, and to what effect. Despite our apprehension about surveillance technology, *Spying with Maps* is not a jeremiad, crammed with dire warnings about eyes in the sky and invasive tracking. Monmonier's approach encompasses both skepticism and the acknowledgment that geospatial technology brings with it unprecedented benefits to governments, institutions, and individuals, especially in an era of asymmetric warfare and bioterrorism. Monmonier frames his explanations of what this new technology is and how it works with the question of whether locational privacy is a fundamental right. Does the right to be left alone include not letting Big Brother (or a legion of Little Brothers) know where we are or where we've been? What sacrifices must we make for homeland security and open government? With his usual wit and clarity, Monmonier offers readers an engaging, even-handed introduction to the dark side of the new technology that surrounds us—from traffic cameras and weather satellites to personal GPS devices and wireless communications.

City Competitiveness and Improving Urban Subsystems: Technologies and Applications Bulu, Melih, 2011-10-31
Cities are becoming the wealth producing centers of national economies. Increasing the operational efficiency of the city will bring a competitive edge to the whole system. Yet, many city subsystems cannot work together, creating significant problems and inefficiencies. *City Competitiveness and Improving Urban Subsystems: Technologies and Applications* uses information science perspectives to improve working subsystems in transportation, sewage, electricity, water, communication, education, health, governance, and infrastructure since their efficient and synchronized operation is vital for a competitive city. This pioneering approach will interest researchers, professionals, and

policymakers in urban economy, regional planning, and information science disciplines who wish to improve the competitiveness of their cities.

Special Edition Using the Internet and Web Michael Miller, 2001 Special Edition Using the Internet and Web covers multiple individual end-user activities-it's like having a dozen activity-specific books under a single cover! The book is organized by activity-how people spend their time online. Each chapter describes a specific activity, and shows users the best ways to engage in that activity online-complete with real-world tips and advice for getting the most of that time online. Topics range from getting connected-and getting connected faster-to online shopping and downloading MP3 files. In short, whatever users want to do online, they'll find in this book-without having to wade through hundreds of pages of software-specific instruction.

Artificial Intelligence and Cognitive Science Luca Longo, Ruairi O'Reilly, 2023-02-22 This open access book constitutes selected papers presented during the 30th Irish Conference on Artificial Intelligence and Cognitive Science, held in Munster, Ireland, in December 2022. The 41 presented papers were thoroughly reviewed and selected from the 102 submissions. They are organized in topical sections on machine learning, deep learning and applications; responsible and trustworthy artificial intelligence; natural language processing and recommender systems; knowledge representation, reasoning, optimisation and intelligent applications.

Using ICT in the Early Years Alex Morgan, John Siraj-Blatchford, 2013-02-13 A step-by-step guide on how to teach young children a variety of ICT in a meaningful and creative way. This title, written by ICT experts in the early years, Prof. John Siraj-Blatchford and Dr. Alex Morgan, is a step-by-step guide on how to teach children under 8 a variety of ICT. This book is designed to be easy to follow by even the most technophobic of readers and contains practical advice on the following: * How to create engaging and creative activities for children in the early years using a range of ICT * A guide to the different types of ICT available, from Bee-Bots to white boards * How to take ICT out of the classroom, with activities to use in outdoor play sessions * How to use ICT in role play to promote children's creativity and imagination * What ICT skills the EYFS and Welsh Foundation Phase require early years practitioners to deliver * Ideas and case studies on best practice in using sustained shared thinking with young children This is a must-buy for anyone wanting meaningful and child-friendly ways of approaching ICT with children under 8.

Intelligent Autonomous Systems 15 Marcus Strand, Rüdiger Dillmann, Emanuele Menegatti, Stefano Ghidoni, 2018-12-31 This book presents the latest advances and research achievements in the fields of autonomous robots and intelligent systems, presented at the IAS-15 conference, held in Baden-Baden, Germany, in June 2018. It brings together contributions from researchers, engineers and practitioners from all over the world on the main trends of robotics: navigation, path planning, robot vision, human detection, and robot design – as well as a wide range of applications. This installment of the conference reflects the rise of machine learning and deep learning in the robotics field, as employed in a variety of applications and systems. All

contributions were selected using a rigorous peer-review process to ensure their scientific quality. The series of biennial IAS conferences was started in 1986: since then, it has become an essential venue for the robotics community.

Building the Hyperconnected Society- Internet of Things Research and Innovation Value Chains, Ecosystems and Markets Ovidiu Vermesan, Peter Friess, 2022-09-01 This book aims to provide a broad overview of various topics of Internet of Things (IoT), ranging from research, innovation and development priorities to enabling technologies, nanoelectronics, cyber-physical systems, architecture, interoperability and industrial applications. All this is happening in a global context, building towards intelligent, interconnected decision making as an essential driver for new growth and co-competition across a wider set of markets. It is intended to be a standalone book in a series that covers the Internet of Things activities of the IERC – Internet of Things European Research Cluster from research to technological innovation, validation and deployment. The book builds on the ideas put forward by the European Research Cluster on the Internet of Things Strategic Research and Innovation Agenda, and presents global views and state of the art results on the challenges facing the research, innovation, development and deployment of IoT in future years. The concept of IoT could disrupt consumer and industrial product markets generating new revenues and serving as a growth driver for semiconductor, networking equipment, and service provider end-markets globally. This will create new application and product end-markets, change the value chain of companies that creates the IoT technology and deploy it in various end sectors, while impacting the business models of semiconductor, software, device, communication and service provider stakeholders. The proliferation of intelligent devices at the edge of the network with the introduction of embedded software and app-driven hardware into manufactured devices, and the ability, through embedded software/hardware developments, to monetize those device functions and features by offering novel solutions, could generate completely new types of revenue streams. Intelligent and IoT devices leverage software, software licensing, entitlement management, and Internet connectivity in ways that address many of the societal challenges that we will face in the next decade.

Research Methods for Public Health Amy A. Eyler, PhD, CHES, 2020-11-05 Note to Readers: Publisher does not guarantee quality or access to any included digital components if book is purchased through a third-party seller. Research Methods for Public Health provides foundational knowledge and practical guidance for all steps in the research process using public health examples and real-world applications to reinforce all concepts. It covers everything students need to have a firm basis on how to design public health research, how to collect and manage data using a variety of study designs and methods, and how to share research results. Foundational topics such as searching the literature, finding gaps, formulating research questions, operationalization and measurement, sampling, budgeting for research studies, summarizing and visualizing data, disseminating results and more are explained in clear and accessible prose. The textbook emphasizes skills including question development, survey design and implementation, qualitative methodology, mixed methods research, how to record and analyze quantitative and qualitative data, and how to use secondary data. Regardless of whether you are starting your scientific research career path, or are on track to

become a public health practitioner, or plan on becoming a health policymaker, this textbook provides an authoritative introduction to research and its importance on improving public health practice for everyone entering the field. Richly illustrated and with an abundance of helpful tables, boxes, and practical public health case studies and examples, this textbook contains the core principles, concepts, and knowledge of how to design, plan, evaluate, and disseminate public health research. Research Methods for Public Health comes with a full Instructor package including PowerPoints, test banks, and an Instructor's Manual with detailed classroom activities, CEPH competency mapping, and more. Key Features: Provides the principles and best practices of general research methods texts combined with specific public health relevance Applicable to students who want to conduct research as part of their career as well as those who need the skills to understand how public health evidence is developed through research Includes chapters on Developing Budgets and Timelines for Research Studies and Disseminating Research Results, topics often overlooked in other textbooks Aligns content with program competencies and skills essential for those entering the public health field Contains numerous illustrations, tables, boxes, and case studies which provide important context to key concepts
