Spying with Maps Mark Monmonier,2002-11-15 Maps, as we know, help us find our way around. But they're also powerful tools for someone hoping to find you. Widely available in electronic and paper formats, maps offer revealing insights into our movements and activities, even our likes and dislikes. In *Spying with Maps*, the mapmatician Mark Monmonier looks at the increased use of geographic data, satellite imagery, and location tracking across a wide range of fields such as military intelligence, law enforcement, market research, and traffic engineering. Could these diverse forms of geographic monitoring, he asks, lead to grave consequences for society? To assess this very real threat, he explains how geospatial technology works, what it can reveal, who uses it, and to what effect. Despite our apprehension about surveillance technology, *Spying with Maps* is not a jeremiad, crammed with dire warnings about eyes in the sky and invasive tracking. Monmonier's approach encompasses both skepticism and the acknowledgment that geospatial technology brings with it unprecedented benefits to governments, institutions, and individuals, especially in an era of asymmetric warfare and bioterrorism. Monmonier frames his explanations of what this new technology is and how it works with the question of whether locational privacy is a fundamental right. Does the right to be left alone include not letting Big Brother (or a legion of Little Brothers) know where we are or where we've been? What sacrifices must we make for homeland security and open government? With his usual wit and clarity, Monmonier offers readers an engaging, even-handed introduction to the dark side of the new technology that surrounds us—from traffic cameras and weather satellites to personal GPS devices and wireless communications.

The Routledge Companion to Visual Organization Emma Bell,Samantha Warren,Jonathan E. Schroeder,2014-01-23 The visual constitutes an increasingly significant element of contemporary organization, as post-industrial societies move towards economies founded on creative and knowledge-intensive industries. The visual has thereby entered into almost every aspect of corporate strategy, operations, and communication; reconfiguring basic notions of management practice and introducing new challenges in the study of organizations. This volume provides a comprehensive insight into the ways in which organizations and their members visualize their identities and practices and how they are viewed by those who are external to organizations, including researchers. With contributions from leading academics across the world, *The Routledge Companion to Visual Organization* is a valuable reference source for students and academics interested in disciplines such as film studies, entrepreneurship, marketing, sociology and most importantly, organizational behaviour.

Web Site Design is Communication Design Thea M. van der Geest,2001-11-30 *Web Site Design is Communication Design* is written for practitioners, trainers, and students of Communication, Business, Information Science and Media Design. This book is based on a series of case studies of web-site design processes in smaller and larger organizations, including Amazon and Microsoft. It offers a well-researched, reflective and thorough analysis of the activities undertaken, in combination with practical, real-life experiences of web-site designers and producers. It pays attention to the often complicated organizational context that web designers and producers have to work in, while they serve both bosses and target groups to their best intents. The importance of careful evaluation is stressed throughout the book and in the concluding checklists, which guide the practitioner through the design process, from initial idea through site maintenance and re-design.

Geographic Information Systems for Transportation Harvey J. Miller,Shih-Lung Shaw,2001 GIS data and tools are revolutionizing transportation research and decision making, allowing transportation analysts and professionals to understand and solve complex transportation problems that were previously impossible. Here, Miller and Shaw present a comprehensive discussion of fundamental geographic science and the applications of these principles using GIS and other software tools. By providing thorough and accessible discussions of transportation analysis within a GIS environment, this volume fills a critical niche in GIS-T and GIS literature.

Encyclopedia on Ad Hoc and Ubiquitous Computing Dharma P. Agrawal,Dr. Bin Xie,2010 Ad hoc and ubiquitous computing technologies have received extensive attention in both the academia and industry with the explosive growth of wireless communication devices. These technologies are beneficial for many applications, such as offering futuristic high bandwidth access for users, and are expected to offer more exciting and efficient services, anytime and anywhere. In order to satisfy these diverse applications, the design issues of various wireless networks such as ad hoc, sensor, and mesh networks are extremely complicated and there are a number of technique challenges that need to be explored, involving every layer of the OSI protocol stack. This book aims to provide a complete understanding of these networks by investigating the evolution of ad hoc, sensor, and mesh networking technologies from theoretic concept to implementation protocols, from fundamentals to real applications. It provides the necessary background material needed to go deeper into the subject and explore the research literature. The explanation in the book is therefore sufficiently detailed to serve as a comprehensive reference for students, instructors, researchers, engineers, and other professionals, building their understanding of these networks. Freeway Traffic State Detection Using CCTV Stationary Images, 2012 Traffic detection and data collection are essential to transportation planning and management. The CCTV (Closed Circuit Television) traffic cameras have been increasingly deployed for traffic surveillance on major roadways by DOT (Department of Transportation) in the U.S. However, the real-time traffic video data is still very limited to be published online because of the large load to the video servers and internet connections. As a result, the traffic snapshots which are clipped from the video data are widely used as an effective approach to publish the real-time traffic conditions through internet. Currently, almost all U.S. states can provide traffic snapshots via DOT or traveler information websites (511 System). These traffic snapshots are published and updated every 1 minute to 5 minutes in different states. They are potential new traffic data source that can be obtained free from internet without additional equipment and instruction cost. They can provide valuable traffic information to analyze traffic flow patterns and congestion status, where no other detectors are available. How to utilize these online CCTV snapshots effectively for traffic detection and data collection would be of practical significance. In this research, a novel traffic state detection model is developed, which could contribute to both academic and industry fields. The primary contribution of this study is to provide an effective solution to detect the traffic state using the CCTV stationary images. Traffic space occupancy is used as a reliable measure for quantitative traffic analysis and congestion estimation. The practical value of the proposed approach is that it turns widely freely available video source from internet into useful traffic information, and this could be done without interfering the existing CCTV system in DOT. The traffic image data used in this study were collected from I-894 freeway corridor in Milwaukee, Wisconsin. I proposed a model to measure the traffic space occupancy, which could not be measured directly in the field. In addition, a perspective transformation method is provided to estimate the traffic parameters without accurate camera calibration. The proposed algorithms and image processing were implemented in MATLAB. The model validation is performed with field loop detector data collected from the same roadway segments. The model performance was evaluated under different traffic status, illumination conditions, and roadway geometry. The validation and evaluation results

indicate that the proposed model has a robust detecting capability for traffic status.

Maps and the Internet M.P. Peterson,International Cartographic Association,2005-12-17 This book examines a new trend affecting cartography and geographic information science. Presenting the work of over 30 authors from 16 different countries, the book provides an overview of current research in the new area of Internet Cartography. Chapters deal with the growth of this form of map distribution, uses in education, privacy issues, and technical aspects from the point of view of the map provider - including Internet protocols such as XML and SVG. Many see the Internet as a revolution for cartography. Previously tied to the medium of paper and expensive large-format color print technology, maps had a limited distribution and use. The Internet made it possible to not only distribute maps to a much larger audience but also to incorporate interaction and animation in the display. Maps have also become timelier with some maps of traffic and weather being updated every few minutes. In addition, it is now possible to access maps from servers throughout the world. Finally, the Internet has made historic maps available for viewing to the public that were previously only available in map libraries with limited access. * Provides comprehensive coverage of maps and the internet * Delivers a global perspective * Combines theoretical and practical aspects
