Traffic Tom Vanderbilt,2009-08-11 Driving is a fact of life. We are all spending more and more time on the road, and traffic is an issue we face

everyday. This book will make you think about it in a whole new light. We have always had a passion for cars and driving. Now Traffic offers us an exceptionally rich understanding of that passion. Vanderbilt explains why traffic jams form, outlines the unintended consequences of our attempts to engineer safety and even identifies the most common mistakes drivers make in parking lots. Based on exhaustive research and interviews with driving experts and traffic officials around the globe, Traffic gets under the hood of the quotidian activity of driving to uncover the surprisingly complex web of physical, psychological and technical factors that explain how traffic works.

Investigation of Road Traffic Fatalities Jay Dix,2000-03-23 The screech of rubber against asphalt. And then the crash: a violent two-car collision resulting in a twisted mass of metal, plastic, and glass-and worse, the deaths of both drivers. Accident reconstruction is but one phase of road traffic fatality (RTF) cases. Even as police officers draw their last diagram, interview their last witness, and reconstruct their final scenario, a different team of investigators works diligently on solving another puzzle: determining how the victims actually died. Investigation of Road Traffic Fatalities: An Atlas covers the issues that face medical examiners and

coroners in determining the nature and extent of RTF injuries as well as the cause, manner, and circumstances of death. Also ideal for medicolegal death investigators and law enforcement personnel who work with medical examiners and coroners during RTF investigations, this Atlas covers everything from Typical road traffic fatality injuries to Injuries caused by safety/restraint devices and Autopsy and toxicology testing. For anyone involved in RTF probes, Investigation of Road Traffic Fatalities: An Atlas is essential reading.

Traffic Records Program Assessment Advisory United States. National Highway Traffic Safety Administration,2013-10-25 This updated edition of Traffic Records Program Assessment Advisory gives States information on the contents, capabilities, and data quality of an effective traffic records system by describing an ideal system that supports high-quality decisions and leads to

cost-effective improvements in highway and traffic safety. In addition, the updated Advisory outlines a comprehensive approach for assessing the systems and processes that govern the collection, management, and analysis of traffic records data. The Advisory now provides a uniform set of questions derived from the ideal system as described above. The questions are used by a group of qualified independent assessors to determine how close a State's capabilities come to the described ideal. There are three gradations: (a) meets the description of the ideal traffic records system, (b) partially meets the ideal description, and (c) does not meet the ideal description. The Advisory also provides State respondents with standards of evidence that identify the specific information necessary to answer each assessment question. This assessment instrument highlights a State traffic records system's strengths as well as opportunities for improvement.
