Delivering Sustainable Competitiveness Luís Carvalho, Leo van den Berg, Hazem Galal, Peter Teunisse, 2016-07-01 Global trends such as climate change, digitalisation, enhanced concepts of democracy and the consequences of the 2008 financial crisis are changing the playing field of cities across the world. Urban development objectives are shifting away from being purely concerned with wealth creation and competitiveness, to increasingly combining social and environmental dimensions. In this context, how can cities influence and sustain their competitive position over time? Which new types of urban strategies are emerging, and which organising capacities are proving the most important? This book provides insight into the complex issue of delivering sustainable competitiveness by analysing a number of innovative urban development strategies in context. Questions and topics addressed include: how can new legacies of city events be secured; how can clean technology industries be nurtured through urban regeneration initiatives; and how can the impact of urban safety strategies be enhanced? These and other pivotal questions are explored through close attention to the enabling factors linking ideas with results, such as distributed leadership, collaboration, communication and experimentation. Combining case studies from Europe, Africa, South America and Southeast Asia, the book provides a truly international perspective on the potentials and limitations of a new generation of urban development and competitiveness strategies.

In a new publication and corresponding exhibition *A History of Mobile in 22 Objects* (October 30, 2020 - December 31, 2021), the History Museum of Mobile has endeavored to tell a very big history through a decidedly small number of objects. Twenty-two unexpected and compelling artifacts from the museum's collection weave together over 300 years of Mobile history, from the pre-Colonial era to the 21st-century port. Together, they are an accessible, object-based guide to Mobile history--

Positron Emission Tomography Dale L. Bailey, David W. Townsend, Peter E. Valk, Michael N. Maisey, 2004-10-28 Essential for students, science and medical graduates who want to understand the basic science of Positron Emission Tomography (PET), this book describes the physics, chemistry, technology and overview of the clinical uses behind the science of PET and the imaging techniques it uses. In recent years, PET has moved from high-end research imaging tool used by the highly specialized to an essential component of clinical evaluation in the clinic, especially in cancer management. Previously being the realm of scientists, this book explains PET instrumentation, radiochemistry, PET data acquisition and image formation, integration of structural and functional images, radiation dosimetry and protection, and applications in dedicated areas such as drug development, oncology, and gene expression imaging. The technologist, the science, engineering or chemistry graduate seeking further detailed information about PET, or the medical advanced trainee wishing to gain insight into the basic science of PET will find this book invaluable. This book is primarily repackaged content from the Basic Science section of the 'big' Valk book on PET. It contains new, completely revised and unchanged chapters covering the basic sciences section of the main book - total 18 chapters: 2 new (chapters 1, 16) 8 completely revised (chapters 4, 5, 8, 13, 14, 15, 17, 18) 3 minor corrections (chapters 2, 6, 11) 5 unchanged (chapters 3, 7, 9, 10, 12)
