Heraclides of Pontus H  raclide du Pont, Heraclides of Pontus hailed from the shores of the Black Sea. He studied with Aristotle in Plato's Academy, and became a respected member of that school. During Plato's third trip to Sicily, Heraclides served as head of the Academy was almost elected its head on the death of Speusippus. This volume contains a new edition of the sources for Heraclides' life and thought. The text is edited by Eckart Schutrumpf and the translation by Peter Stork, Jan van Ophuijsen and Susan Prince. --Book Jacket.

Core Knowledge and Conceptual Change David Barner,Andrew Scott Baron,2016 We acquire concepts such as atom, force, integer, and democracy long after we are born; these concepts are not part of the initial cognitive state of human beings. Other concepts like object, cause, or agent may be present early in infancy--if not innately. Processes of change occur throughout our conceptual development, which prompts two key questions: Which human concepts constitute innate, core knowledge? How do humans acquire new concepts, and how do these concepts change in development? Core Knowledge and Conceptual Change provides a unique theoretical and empirical introduction to the study of conceptual development, documenting key advances in case studies, including ground-breaking science on human representations of language, objects, number, events, color, space, time, beliefs, and desires. Additionally, it explores how humans engage in moral reasoning and causal explanation: Are humans born good and tainted by an imperfect world, or do we need to teach children to be moral? Could a concept like freedom be woven into the human soul, or is it a historical invention, constructed over generations of humans? Written by an eminent list of contributors renowned in child development and cognitive science, this book delves widely, and deeply, into the cognitive tools available at birth that are repurposed, combined, and transformed to complex, abstract adult conceptual representations, and should be of interest to developmental psychologists, linguists, philosophers, and students of cognitive science.

From Physics to Daily Life Beatrice Bressan,2014-11-03 Beatrice Bressan brings together a number of outstanding examples of successful cross-disciplinary technology transfer originating in fundamental physics research, which dramatically impacted scientific progress in areas which changed modern society. Many of them were developed at CERN, a hotbed of fundamental inventions in particle physics. This book deals with breakthrough developments being applied in the world of IT, consumer electronics, aviation, and material sciences. Additional sections of the book deal with knowledge management and technology transfer including their economic aspects. While each chapter has been drafted by an expert in the field, the editor has carefully edited the whole to ensure a coherent overall structure. A must-have for policy makers, technology companies, investors, strategic planners in research and technology, as well as attractive reading for the research community.

An Introduction to Atmospheric Physics Robert G. Fleagle,Joost A. Businger,1981-01-09 This book is addressed to those who wish to understand the relationship between atmospheric phenomena and the nature of matter as expressed in the principles of physics. The interesting atmospheric phenomena are more than applications of gravitation, of thermodynamics, of hydrodynamics, or of electrodynamics; and mastery of the results of controlled experiment and of the related theory alone does not imply an understanding of atmospheric phenomena. This distinction arises because the extent and the complexity of the atmosphere permit effects and interactions that are entirely negligible in the laboratory or are deliberately excluded from it. the objective of laboratory physics is, by isolating the relevant variables, to reveal the fundamental properties of matter; whereas the objective of atmospheric physics, or of any observational science, is to understand those phenomena that are characteristic of the whole system. For these reasons the exposition of atmospheric physics requires substantial extensions of classical physics. It also requires that understanding be based on a coherent way of seeing the ensemble of atmospheric phenomena. Only then is understanding likely to stimulate still more general insights.
