Death by Food Pyramid Denise Minger,2014-01-01 Warning: Shock and outrage will grip you as you dive into this one-of-a-kind exposé. Shoddy science, sketchy politics, and shady special interests have shaped American Dietary recommendations--and destroyed our nation's health--over recent decades. The phrase death by food pyramid isn't shock-value sensationalism, but the tragic consequence of following federal advice and corporate manipulation in pursuit of health. In Death by Food Pyramid, Denise Minger exposes the forces that overrode common sense and solid science to launch a pyramid phenomenon that bled far beyond US borders to taint the eating habits of the entire developed world. Minger explores how generations of flawed pyramids and plates endure as part of the national consciousness, and how the one size fits all diet mentality these icons convey pushes us deeper into the throes of obesity and disease. Regardless of whether you're an omnivore or vegan, research junkie or science-phobe, health novice or seasoned dieter, Death by Food Pyramid will reframe your understanding of nutrition science--and inspire you to take your health, and your future, into your own hands.

Semantic Digital Libraries Sebastian Ryszard Kruk,Bill McDaniel,2008-10-08 Libraries have always been an inspiration for the standards and technologies developed by semantic web activities. However, except for the Dublin Core specification, semantic web and social networking technologies have not been widely adopted and further developed by major digital library initiatives and projects. Yet semantic technologies offer a new level of flexibility, interoperability, and relationships for digital repositories. Kruk and McDaniel present semantic web-related aspects of current digital library activities, and introduce their functionality; they show examples ranging from general architectural descriptions to detailed usages of specific ontologies, and thus stimulate the awareness of researchers, engineers, and potential users of those technologies. Their presentation is completed by chapters on existing prototype systems such as JeromeDL, BRICKS, and Greenstone, as well as a look into the possible future of semantic digital libraries. This book is aimed at researchers and graduate students in areas like digital libraries, the semantic web, social networks, and information retrieval. This audience will benefit from detailed descriptions of both today's possibilities and also the shortcomings of applying semantic web technologies to large digital repositories of often unstructured data.
