Wycoff,Bettina Franzese,2019-01-30 Understanding how chronic stress affects child development with step-by-step guidelines for conducting trauma-informed assessments and interventions Children exposed to early negative and adverse experiences may not think, feel, process emotions, behave, respond to, or relate to others the same way that typically developing children do. If psychologists do not appreciate and understand the effects of trauma in the lives of children, they may be working in ways that are not efficient or effective and may actually be providing a disservice to the children and families they serve. This volume provides an overview of the deleterious effects of adverse childhood experiences (also referred to as complex trauma, toxic stress or developmental trauma) on children's functioning, adjustment, cognitive, social-emotional, behavioral, academic, and neuropsychological outcomes. Complex trauma can alter brain structure and function and throw children off a normal developmental trajectory resulting in a myriad of negative outcomes. In addition, step-by-step guidelines are provided for conducting trauma-informed assessments, treatments, and interventions. Understand how early stressors can affect influence normal development and influence child psychopathology Learn how exposure to early life adversity affects the biological stress systems which can compromise normal brain development Become familiar with the functions and neuropsychological constructs associated with brain regions affected by chronic stress. Identify risk factors that can negatively influence children's behavioral, social, emotional, cognitive, and academic functioning Identify and use trauma-sensitive assessment instruments and protocols Gather background and family history from a trauma perspective Use evidence-based interventions to best meet each child's unique needs Essentials of Trauma-Informed Assessment and Interventions in the Schools is essential reading for school, clinical, and related psychologists and their trainers.

Trauma Assessments Eve B. Carlson,1997-08-01 This book is intended for clinicians at all levels of experience who seek a guide to the assessment of psychological trauma and its effects. After discussion of the theoretical foundation for understanding human responses to traumatic events, Dr. Carlson addresses both conceptual and practical aspects of selecting and administering measures to assess traumatic experiences and trauma responses. Additional chapters provide guidance in interpreting results of assessments and diagnosing trauma-related disorders and a brief introduction to major forms of treatment of trauma-related disorders. Profiles of 36 recommended measures of traumatic experiences and trauma responses are included and are designed to make it easy to find the information needed to obtain the measures. Measures profiled include self-report and interview measures of trauma, self-report measures of trauma responses, structured interviews for posttraumatic and dissociative disorders, and measures for children and adolescents. Flowcharts provide a quick reference for choosing measures at each stage of the assessment process.

Trauma Story Assessment and Therapy: Journal for Field and Clinic Richard F. Mollica,2012

Retraumatization Melanie P. Duckworth,Victoria M. Follette,2012-05-22 Exposure to potentially traumatic events puts individuals at risk for developing a variety of psychological disorders; the complexities involved in treating them are numerous and have serious repercussions. How should diagnostic criteria be defined? How can we help a client who does not present with traditional PTSD symptoms? The mechanisms of human behavior need to be understood and treatment needs to be tested before we can move beyond traditional diagnostic criteria in designing and implementing treatment. No better guide than Retraumatization exists to fulfill these goals. The editors and contributors, all highly regarded experts, accomplish six objectives, to: define retraumatization outline the controversies related to it provide an overview of theoretical models present data related to the frequency of occurrence of different forms of trauma detail the most reliable strategies for assessment to provide an overview of treatments. Contained within is the most current information on prevention and treatment approaches for specific populations. All chapters are uniformly structured and address epidemiological data, clinical descriptions, assessment, diagnosis and prognosis, and prevention. It is an indispensable resource that expands readers' knowledge and skills, and will encourage dialogue in a field that has many unanswered questions.

Understanding and Assessing Trauma in Children and Adolescents Kathleen Nader,2007-09-26 In this volume, Kathleen Nader has compiled an articulate and comprehensive guide to the complex process of assessment in youth and adolescent trauma. There are many issues that are important to evaluating children and adolescents, and it is increasingly clear that reliance on just one type of assessment does not provide the most accurate results. From history to recent advances, this book covers a wide range of methods and measures for assessing trauma, including case examples to illustrate the integration of these different facets. Altogether, the broad scope and inclusive depth of this work make it an essential addition to the field of trauma assessment.

Systemic Interventions for Collective and National Trauma Michal Shamai,2015-09-07 Systemic Interventions for Collective and National Trauma explains the theoretical basis for understanding collective and national trauma through the concept of systems theory, and gives ways of implementing systems theory in interventions at the micro, mezzo, and macro levels. Particular attention is given to the use of socio-political and cultural aspects of interventions with victims, as well as to the ethical codes that social workers and other mental health professionals need to integrate in their work with collective/national trauma. Separated into two distinct parts on theory and practice, this volume is appropriate for practitioners as well as students in advanced courses.

Treatment for Posttraumatic Stress Disorder in Military and Veteran Populations Institute of Medicine,Board on the Health of Select Populations,Committee on the Assessment of Ongoing Efforts in the Treatment of Posttraumatic Stress Disorder,2012-07-22 Prior to the military conflicts in Iraq and Afghanistan, wars and conflicts have been characterized by such injuries as infectious diseases and catastrophic gunshot wounds. However, the signature injuries sustained by United States military personnel in these most recent conflicts are blast wounds and the psychiatric consequences to combat, particularly posttraumatic stress disorder (PTSD), which affects an estimated 13 to 20 percent of U.S. service members who have fought in Iraq or Afghanistan since 2001. PTSD is triggered by a specific traumatic event - including combat - which leads to symptoms such as persistent re-experiencing of the event; emotional numbing or avoidance of thoughts, feelings, conversations, or places associated with the trauma; and hyperarousal, such as exaggerated startle responses or difficulty concentrating. As the U.S. reduces its military involvement in the Middle East, the Departments of Defense (DoD) and Veterans Affairs (VA) anticipate that increasing numbers of returning veterans will need PTSD services. As a result, Congress asked the DoD, in consultation with the VA, to sponsor an IOM study to assess both departments' PTSD treatment programs and services. Treatment for Posttraumatic Stress Disorder in Military and Veteran Populations: Initial Assessment is the first of two mandated reports examines some of the available programs to prevent, diagnose, treat, and rehabilitate those who have PTSD and encourages further research that can help to improve PTSD care.

Assessment of Trauma in Youths Kathleen Nader,2016-05-06 Assessment of Trauma in Youths: Understanding issues of age, complexity, and associated variables is a collection of articles by well-known specialists in the field of childhood trauma. The articles describe developmental issues in addition to others that are important to the assessment of trauma-exposed youth, to the ongoing refinement of trauma-related diagnoses for children, and to understanding PTSD and more complicated reactions to trauma for young people. The book explores trauma in very

young to middle childhood aged children, trauma in adolescents, childhood complicated trauma, and childhood complicated grief. It considers PTSD and Reactive Attachment Disorder as well as discussing disorders that are under continued study such as Developmental Trauma Disorder, Prolonged Grief Disorder, and Traumatic Grief. In the second half of the book, chapters look at the associated features of childhood traumatic response such as genetics and personality, cortisol, poly-victimization, and guilt and shame. Variables such as cortisol reactivity and guilt/shame may influence or follow traumas in children. This book was originally published as a special issue of the Journal of Child and Adolescent Trauma.

Posttraumatic Stress Disorder in Litigation Robert I. Simon, 2008-08-13 The terrorist attacks on the World Trade Center in September 2001 turned PTSD into a household word. But posttraumatic stress disorder has been documented throughout history: For example, as long ago as 1666, Samuel Pepys wrote in his diary that he still had night terrors 6 months after the great fire of London. PTSD, officially recognized as a diagnosis by DSM-III in 1980, is only the most recent term used to describe the suffering of trauma victims. Few could have foreseen its profound impact on litigation. Often dubbed the black hole of litigation -- where allegations are relatively easy to assert but difficult to defend because the symptoms are subjective -- PTSD has deeply influenced civil and criminal law in cases ranging from malpractice and personal injury to sexual harassment and child abuse. It is thus vital for all legal parties involved that forensic examiners perform credible psychiatric and psychological examinations of PTSD claimants. Intended to add direction and discipline to the forensic assessment of PTSD litigants, this expanded second edition begins with an updated chapter on current and future trends for the role of PTSD in litigation. Chapter 2 notes the increasing evidence that exposure to multiple events not only is more common than previously thought but also increases the risk for development of PTSD following the target event. Chapter 3 details diagnostic criteria and guidelines for the forensic psychiatric examination of the PTSD claimant. Most literature discusses PTSD in adults. Chapter 4 offers a rare perspective on PTSD in children and adolescents, including parental response to the trauma, developmental effects, and delayed onset symptoms. Forensic assessment of PTSD claimants is presented in Chapter 5, followed by new chapters on disability determinants (how PTSD impairs occupational functioning) and PTSD in the workplace, where the causal relationship between employment stress and a resulting mental or emotional disorder must be determined. Chapter 8 covers guidelines for malingering in PTSD, where the claimant may be motivated by financial gain or by a reduced charge resulting from an insanity defense. A new chapter on forensic laboratory testing in PTSD presents the tantalizing potential of psychophysiological measurement to redeem the PTSD diagnosis from its daunting subjectivity. This essential collection by 13 U.S. experts sheds important new light on forensic guidelines for effective assessment and diagnosis and determination of disability, serving both plaintiffs and defendants in litigation involving PTSD claims. Mental health and legal professionals, third-party payers, and interested laypersons will welcome this balanced approach to a complex and difficult field.

Assessing and Treating Youth Exposed to Traumatic Stress Victor G. Carrión, M.D., 2018-10-16 A cogent, caring, and comprehensive response to the reality that many children live lives of constant threat, fear, and confusion while lacking opportunities for positive social interactions, stimulation, and empowerment.
