Triazoles 1,2,3 Thomas Finley,2009-09-17 The Chemistry of Heterocyclic Compounds, since its inception, has been recognized as a cornerstone of heterocyclic chemistry. Each volume attempts to discuss all aspects - properties, synthesis, reactions, physiological and industrial significance - of a specific ring system. To keep the series up-to-date, supplementary volumes covering the recent literature on each individual ring system have been published. Many ring systems (such as pyridines and oxazoles) are treated in distinct books, each consisting of separate volumes or parts dealing with different individual topics. With all authors are recognized authorities, the Chemistry of Heterocyclic Chemistry is considered worldwide as the indispensable resource for organic, bioorganic, and medicinal chemists.

EIRLSBN: Twenty years of achievements in rice breeding B.C.Y. Collard,A.M. Ismail,2013 Se ha avanzado considerablemente en el desarrollo de nuevas variedades de arroz de la India oriental, aunque la literatura sobre este tema es limitada. La evidencia de esto es el desarrollo y la liberación de muchas nuevas variedades mejoradas. Al menos 20 de estas variedades han sido liberados en la India de tierras bajas de secano traslado Network Cría Oriental (EIRLSBN). Además de producir nuevas variedades, esta red ha llevado a cabo una importante investigación sobre muchas características de alta prioridad y ha identificado los nuevos padres donantes, grupos de madurez clave para la región, las líneas de élite que se pueden trasplantar en tiempos normales o retardada, y perfiles de variedades de destino para este de la India. Más importante aún, la red ha sido un modelo ejemplar para las alianzas sinérgicas de mejoramiento del arroz. Demuestra los beneficios de la colaboración científica regional e internacional para trabajar para superar la inseguridad alimentaria. En efecto, ha influido en la formación y la estructura de muchas otras redes de cría.

The Development of Arabic Mathematics: Between Arithmetic and Algebra R. Rashed,2013-04-18 An understanding of developments in Arabic mathematics between the IXth and XVth century is vital to a full appreciation of the history of classical mathematics. This book draws together more than ten studies to highlight one of the major developments in Arabic mathematical thinking, provoked by the double fecundation between

arithmetic and the algebra of al-Khwarizmi, which led to the foundation of diverse chapters of mathematics: polynomial algebra, combinatorial analysis, algebraic geometry, algebraic theory of numbers, diophantine analysis and numerical calculus. Thanks to epistemological analysis, and the discovery of hitherto unknown material, the author has brought these chapters into the light, proposes another periodization for classical mathematics, and questions current ideology in writing its history. Since the publication of the French version of these studies and of this book, its main results have been admitted by historians of Arabic mathematics, and integrated into their recent publications. This book is already a vital reference for anyone seeking to understand history of Arabic mathematics, and its contribution to Latin as well as to later mathematics. The English translation will be of particular value to historians and philosophers of mathematics and of science.

Additionally, many universities and educational institutions have their own digital libraries that provide free

access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers.
