Non-Rocket Space Launch and Flight Alexander

Bolonkin, 2010-07-07 In recent years scientists have investigated a series of new methods for non-rocket space launch, which promise to revolutionize space launches and flight. Particularly in the current political climate new, cheaper, and more 'fuel efficient' methods are being investigated. Such new methods include the gas tube method, cable accelerators, tether launch systems, space elevators, solar and magnetic sails, circle launcher space keepers and more. The author of Non-Rocket Space Launch and Flight brings a vast amount of experience to the topic, having worked as a engineer, designer, project director and researcher at key institutes including NASA and the US Air Force. Explores all the new non-rocket space launch methods, and compares them with each other and traditional rockets Investigates the unifying principles of the different systems and shows how to select the best design suited to the mission Author brings together technical and theoretical expertise from both industry and academia

**The Proton Launcher** Christian Lardier,Stefan

Barensky,2018-02-15 The Soviet / Russian space program was in the hands of three industrial empires: those of Serguei Korolev, the Soviet von Braun who launched Sputnik-1 and Yuri Gagarin, Vladimir Tchelomei, his main competitor, and Mikhail Yangel, Many launchers and satellites in Ukraine. In 2011, we published a first book on the history of the Soyuz launcher that was developed by Korolev and launched more than 1,800 copies. This time, we tell

the story of the Proton, the main competitor of the European launcher Ariane, which was developed by Chelomei and launched more than 400 copies. Finally, the last book of the trilogy will deal with the many developments of Yangel. In the three books, the first part deals with the history of rockets in the USSR / Russia (East) and the second part on the history of their commercialization in the West.

**Total Frat Move** W.R. Bolen,2013-01-15 THE NEW YORK TIMES BEST-SELLER Put simply, it's time for a national update on college fraternities. Greek life today makes Animal House look like a Pixar movie. The amount of alcohol that is being consumed, promiscuous sex that is being enjoyed, and intense drug-induced raging that is taking place on campuses across the country has quietly reached ridiculous new heights. Written with the goal of being the most fun you've ever had reading a book, TOTAL FRAT MOVE pulls back the curtain on this world of hard-partying American decadence. The stories are unabashed. They are hilarious. And they are going to blow you away. You're welcome, world.

Scud Ballistic Missile and Launch Systems 1955-2005 Steven J. Zaloga,2013-03-20 The Scud missile was developed as the centerpiece of Soviet plans to fight nuclear war in the heart of Europe. However, it was never used in its intended role and has instead become a symbol of the changing nature of warfare in the aftermath of the Cold War. Saddam Hussein's Iraqi armed forces were almost helpless in the face of the Coalition forces in the 1991 Gulf War; the only weapon that Iraq could use to injure the Coalition forces was its arsenal of Scud missiles. This book explores the development and variants of the missile and its launch systems, its proliferation outside of the West, and its role in conflicts around the world.

*The New Gold Rush* Joseph N. Pelton, 2016-11-04 This book captures the most exciting advances in the harnessing of space as a global resource. The authors track the growing number of space businesses and opportunities for investors, and the many possible benefits of spaceplanes, space stations and even space colonies. The authors also discuss the need for more regulatory reform. Companies like Planetary Resources are now forming to find mineral-rich asteroids and bring back new riches to Earth. Solar power satellites in the next few years will start to beam clean energy back to Earth, to meet the growing demands of a still-developing world. Innovative space industries are vital to the survival of modern human life, and the authors demonstrate what can be done to encourage the growing of the New Space frontier. From lassoing and then mining asteroids to developing new methods of defending the planet from space hazards and setting up new hotels and adventures for tourists in space, this new industry will have profound effects on Earth, especially on its economy. This book is based on a study of international experts commissioned ahead of the UNISPACE+50 meeting, having distilled the results of this comprehensive fact-finding process into a compact and very readable form. It can serve as an excellent starting point for understanding all the activities underway or planned to make space truly our next frontier.

**Femto technologies and Innovative Projects** Alexander Bolonkin, 2017-03-15 New macro-projects, concepts, ideas, methods, and innovations are explored here, but hardly developed. There remain many problems that must be researched, modeled, and tested before these summarized research ideas can be practically designed, built, and utilized—that is, fully developed and utilized. Most ideas in our book are described in the following

way: 1) Description of current state in a given field of endeavor. A brief explanation of the idea researched, including its advantages and short comings; 2) Then methods, estimation and computations of the main system parameters are listed, and 3) A brief description of possible applications-candidate macro-projects, including estimations of the main physical parameters of such economic developmental undertakings. The first and third parts are in a popular form accessible to the wider reading public, the second part of this book will require some mathematical and scientific knowledge, such as may be found amongst technical school graduate students.
