Anthology of Turkish Science Fiction Stories Sümeyra Buran ,Veli Uğur,2023-12-21 Turkish science fiction dates back to the early years of the twentieth century and serious development has been seen ever since. The writers, who escaped from the darkness of the First World War and took refuge in utopian science fiction, added the excitement created by science and technology to their texts over time. Turkish writers, who followed the science fiction works from the West and made efforts for the development of this genre, produced very qualified works that could compete with their contemporaries at some points. However, due to some historical, social, and economic problems, it was not possible for these works to meet readers in the West. In this anthology, the works of Turkish science fiction writers are brought together for the first time in English. Contemporary science fiction writers have written short stories for this anthology. Hence, the resulting diversity of stories represents a contribution to science fiction literature. An important feature of the anthology is that it includes examples showing how science and technology are perceived philosophically by authors outside of Europe and America. Since literature is an indispensable resource to investigate the equivalent of science fiction, which was born with modernism, in post-modern societies. This anthology of Turkish science fiction will be an important Non-Western SF source for both science fiction readers and researchers.

The Diffusion of "Small" Western Technologies in the Middle East Uri M. Kupferschmidt,2023-10-04 In recent years we have become interested in the diffusion of "small" Western technologies in the countries of the Middle East during the 19th and 20th centuries, the era of Imperialism and first globalization. We postulated a contrast between "small" and "big" technologies. Under the latter category we may understand railway systems, electricity grids, telegraph networks, and steam navigation, imposed by foreign powers or installed by connected local entrepreneurs. But many "small" Western technologies, such as sewing machines, typewriters, pianos, eyeglasses, and similar consumer goods, which had been developed and manufactured in Europe and America, were wanted, and willingly acquired by the agency of individual users elsewhere. In a few cases, however, the

inventions had to be adapted, or were overstepped, and even delayed. Some were adopted as social markers or status symbols only by elites who could afford them. Processes of adoption and diffusion therefore differed according to cultural settings, preferences, and needs. Social and cultural historians, and social scientists, not only of the Middle East, will find in this collection of essays a new approach to the impact of Western technological inventions on the Middle East.

Greek Rebetiko from a Psychocultural Perspective Daniel Koglin, 2017-07-05 Greek Rebetiko from a Psychocultural Perspective: Same Songs Changing Minds examines the ways in which audiences in present-day Greece and Turkey perceive and use the Greek popular song genre rebetiko to cultivate specific cultural habits and identities. In the past, rebetiko has been associated chiefly with the lower strata of Greek society. But Daniel Koglin approaches the subject from a different perspective, exploring the mythological and ritual aspects of rebetiko, which intellectual elites on both sides of the Aegean Sea have adapted to their own world views in our age of globalized consumption. Combining qualitative and quantitative methods from ethnomusicology, ritual studies, conceptual history and music psychology, Koglin casts light on the role played by national perceptions in the processes of music production and consumption. His analysis reveals that rebetiko persistently oscillates between conceptual categories: it is a music both ours and theirs, marginal and mainstream, joyful and grievous, sacred and profane. The study culminates in the thesis that this semantic multistability is not only a key concept to understanding the ongoing popularity of rebetiko in Greece, and its recent renaissance in Turkey, but also a fundamental aspect of the human experience on the south-eastern borders of Europe.

Text Entry Systems I. Scott MacKenzie, Kumiko Tanaka-Ishii, 2010-07-28 *Text Entry Systems* covers different aspects of text entry systems and offers prospective researchers and developers global guidelines for conducting research on text entry, in terms of design strategy, evaluation methodology, and requirements; a discussion of the history and current state of the art of entry systems; and specific guidelines for designing entry systems for a specific target, depending on devices, modalities, language, and different physical conditions of users. Text entry has never been so important as it is today. This is in large part due to the phenomenal, relatively recent success of mobile computing, text messaging on mobile phones, and the proliferation of small devices like the Blackberry and Palm Pilot. Compared with the recent past, when text entry was primarily through the standard qwerty keyboard, people today use a diverse array of devices with the number and variety of such devices ever increasing. The variety is not just in the devices, but also in the technologies used: entry modalities have become more varied and include speech recognition and synthesis, handwriting recognition, and even eye-tracking using image processing on web-cams. Statistical language modeling has advanced greatly in the past ten years and so therein is potential to facilitate and improve text entry – increasingly, the way people communicate. This book covers different aspects of text entry systems and offers prospective researchers and developers Global guidelines for conducting research on text entry, in terms of design strategy, evaluation methodology, and requirements History and current state of the art of entry systems, including coverage of recent research topics Specific guidelines for designing entry systems for a specific target, depending on devices, modalities, language, and different physical conditions of users

The Sound of the Future Tobias Dengel, 2023-10-10 A Wall Street Journal Bestseller A USA Today Bestseller Why voice technology is the next big thing in technology, as big as mobile a decade ago and the internet in the late 90s, fundamentally altering the way companies do business. Voice is the next technology – remarkably similar in potential impact to the internet and mobile computing - poised to change the way the world works. Tobias Dengel is

in the vanguard of this breakthrough, understanding the deep, wide-ranging implications voice will have for every industry. In *The Sound of the Future*, he connects the dots about this emerging paradigm to vividly illustrate how business leaders can stay ahead of the game, rather than scrambling to catch up, as voice technology gradually reveals its power, creating a host of new winners and losers. Using fascinating, colorful stories, Dengel explains how the “voice-first” experience is becoming part of the global technology mainstream, exploring the ways voice will do a better job of serving basic human needs such as safety, speed, accuracy, convenience, and fun, as well as making it possible for hundreds of millions of people around the planet to participate more fully and productively in today’s high-tech world by making interactions with technology virtually effortless. A pervasive technology like the internet and mobile, voice, with applications in marketing, sales, service, manufacturing, and logistics, will change the way we work at every level and every function, driving down costs, boosting productivity, and enabling the creation of entirely new business models. This is not simply about Siri and Alexa. They are the tantalizing but incomplete precursors of the ultimate interface that will make technology easier, faster, more accurate, and more human.
