Overcoming School Refusal Joanne Garfi,2018-01-31 School refusal affects up to 5% of children and is a complex and stressful issue for the child, their family and school. The more time a child is away from school, the more difficult it is for the child to resume normal school life. If school refusal becomes an ongoing issue it can negatively impact the child's social and educational development. Psychologist Joanne Garfi spends most of her working life assisting parents, teachers, school counsellors, caseworkers, and community policing officers on how best to deal with school refusal. Now her experiences and expertise are available in this easy-to-read practical book. Overcoming School Refusal helps readers understand this complex issue by explaining exactly what school refusal is and provides them with a range of strategies they can use to assist children in returning to school. Areas covered include: • types of school refusers • why children refuse to go to school • symptoms • short term and long term consequences • accurate assessment • treatment options • what parents can do • what schools can do • dealing with anxious high achievers • how to help children on the autism spectrum with school refusal

The Mechanical Horse Margaret Guroff,2016-04-05 With cities across the country adding miles of bike lanes and building bike-share stations, bicycling is enjoying a new surge of popularity in America. It seems that every generation or two, Americans rediscover the freedom of movement, convenience, and relative affordability of the bicycle. The earliest two-wheeler, the draisine, arrived in Philadelphia in 1819 and astonished onlookers with the possibility of propelling themselves “like lightning.” Two centuries later, the bicycle is still the fastest way to cover ground on gridlocked city streets. Filled with lively stories, *The Mechanical Horse* reveals how the bicycle transformed American life. As bicycling caught on in the nineteenth century, many of the country's rough, rutted roads were paved for the first time, laying a foundation for the interstate highway system. Cyclists were among the first to see the possibilities of self-directed, long-distance travel, and some of them (including a fellow named Henry Ford) went on to develop the automobile. Women shed their cumbersome Victorian dresses—as well as their restricted gender roles—so they could ride. And doctors recognized that aerobic exercise actually benefits the body, which helped to modernize medicine. Margaret Guroff demonstrates that the bicycle's story is really the story of a more mobile America—one in which physical mobility has opened wider horizons of thought and new opportunities for people in all avenues of life.

Urban Transportation Systems Sigurd Grava,2002-09-09 *Urban Transportation Systems* is a complete guide to the types of transportation available to communities together with the technical tools needed to evaluate each for given circumstances.

April Fool's Day Josip Novakovich,2009-10-13 Ivan Dolinar is born in Tito's Yugoslavia on April Fool's Day, 1948 -- the auspicious beginning of a life that will be derailed by backfiring good intentions in a world of propaganda and paranoia. At age nineteen, an innocent prank cuts the young Croatian's budding medical career short and lands him in a notorious labor camp. Released on the eve of civil war, Ivan is drafted into the wrong army, becoming a pawn in an absurd conflict in which the rules and loyalties shift abruptly and without warning. But even in a world gone mad, one course of action remains eminently sane: survival. Told with bitingly dark humor and a deep tenderness, *April Fool's Day* is both a devastating political satire and a razor-sharp parody of war.

Spirit and Place Christopher Day,2012-06-14 Built environment surrounds us for 90% of our lives but only now are we realising its influence on the environment, our health, and how we think, feel and behave both individually and socially. *Spirit & Place* shows how to work towards a sustainable environment through socially inclusive processes of placemaking, and how to create places that are nourishing psychologically and physically, to soul and spirit as well as body. This book's unique arguments identify important, but often unrecognised, principles and illustrate their applicability in a wide range of situations, price-ranges and climates. It shows how to reconcile the apparently incompatible demands of environmental, economic and social sustainability; how to moderate climate to make places of delight, and realign social pressures so places both support society and maximise economic viability. Thought provoking and easy to understand, Christopher Day uses everyday examples to relate his theories to practice and our experience.

Centenarians Belle Boone Beard,1991 Successful survivors speak for themselves in this exhaustive study of the lives, attitudes, and lifestyles of more than 500 centenarians. A product of the late pioneer gerontological researcher Belle Boone Beard's over forty years of teaching, study, research, and writing in the field of aging, the book extends the author's belief that centenarians have a grasp of the essence of life itself. The volume, not a statistical research report, is based on the largest collection of data on centenarians to date. The centenarians describe their characteristics, lifestyles, and personal philosophies in response to questions such as: What characteristics and daily living patterns aided their longevity? and Do centenarians have answers about survival and successful living? Separate sections address the areas of health, education, socioeconomic status, work, social life, philosophy, romance, and individuality. Beard's insights regarding the personal characteristics and principles by which centenarians live contain some unexpected findings in the areas of social relationships and social environments. This posthumously edited volume is faithful to Beard's goals, writing style, and content themes. The five-part volume begins with an introduction that contains an overview of centenarians from the point of view of the author's forty years of study. Part II describes some of the personal characteristics of centenarians' daily lives and points up important commonalities in actions, thought, and goals. Centenarians' contributions in the areas of work, family, and community are presented in Part III, which highlights their imagination, work ethic, and persistent romantic feeling about all of life. The focus of Part IV is on the relationship between personal growth achievements and national history. The last part reports on the study's findings and suggests further research implications. The appendices contribute documentation, fifteen short stories by or about centenarians, and a form for contacting the Belle Boone Beard Gerontology Center. Excellent supplemental reading for courses in Interdisciplinary Gerontology, Sociology of Aging, Psychology of Aging, and Demographics, this volume will also be of interest to any reader who wishes to learn about the correlates of extreme longevity.

Prostate cancer is when cancer develops in the prostate, a gland in the male reproductive system. It may initially cause no symptoms. In later stages it can cause difficulty urinating, blood in the urine, or pain in the pelvis, back or when urinating. This book provides some latest research and findings on breast cancer, cervical cancer and prostate cancer. The aim of this book is to serve as an important reference book for individuals working in biomedical laboratories, and for clinical professionals. There are totally 13 chapters in this book. Chapter 1 proposes an outlook on different endoscopic surgical procedures to treat cervical cancer, using traditional laparoscopy and robotics. Chapter 2 reviews the clinical results of carbon ion radiotherapy (C-ion RT) for uterine cervical cancer. Carbon-ion RT has been established as a safe short-term treatment for locally advanced uterine cervical cancer. Chapter 3 summarises chrysin inhibits proliferation, induces apoptosis and reduce angiogenesis in most tested cancer cells, including cervical cancer cells. Chapter 10 summarizes the mTOR pathway and the clinical results in breast cancer treatment, relating them to results obtained using cultured MCF-7 breast cancer tamoxifen resistant sublines. Chapter 11 discusses how to develop a standard extraction method, yielding tomato products which are suitable for cell cultures, and enable product comparison of different tomato varieties. Chapter 12 describes principles and processes that are involved in investigating biological or clinical problems with nuclear magnetic resonance (NMR) based metabolomics - an approach that involves the global analysis of metabolites. The authors use prostate cancer as a case study to outline the processes, applications and potential of metabolomics for inform scientists and clinicians.
