Castles Made of Sand Andre Gerolymatos,2010-11-23 Extensively researched—with detailed source notes and an expansive bibliography—and cogently argued, Gerolymatos's study of diplomacy by espionage is timely and instructive. - Publishers Weekly With roots in imperialism and the nineteenth-century mindset of the Great Game, Western nations have waged an intricate spy game this past century to establish control over the Middle East, secure access to key resources and regions of commerce, and prevent the spread of Soviet communism into the region. From the Suez Canal to the former Ottoman Empire, British and American intelligence communities have conspired to topple regimes and initiate Muslim leaders as pawns in a geopolitical chess game fought against Marxist expansion. Yet while the Iron Curtain was doomed to fall near the end of the twentieth century, this pattern of tunnel vision has created a different monster. The resulting resurgence of Muslim radicalism, and the induction of Arabs and other Muslims into the dark arts of espionage and sabotage, have only served to fan the flames in an already incendiary region and deepen the tensions between the Middle East and the West today. An authority on international studies and the history of guerilla warfare, André Gerolymatos offers the contemporary reader insight into the intelligence game that is still waged internationally with lethal intent, and into the Middle Eastern terrorist networks that had evolved over the decades. In this definitive account of covert operations in the Middle East, the author brings to life the extraordinary men and women whose successes and failures have shaped relations, and he reveals how the explosive nature of the region today has direct roots in the history of American and Western intervention.

The Rise and Fall of Greater Syria Carl C. Yonker,2021-04-19 The Syrian Social Nationalist Party devoted itself to reviving and unifying the Syrian nation and establishing this nation's complete independence over its historical homeland, Greater Syria. It continues its struggle today, influencing and shaping Lebanese and Syrian society and politics. Yet, the party remains largely unknown and misunderstood, a condition that stems from the lack of any comprehensive study of it. This book fills this gap. Syrian nationalism and nationalist movements, generally speaking, have been largely neglected and ignored by historians, scholars, and observers of the Middle East. So, too, has the SSNP. The lack of detailed and nuanced analyses has left significant gaps in the party's rich history unaddressed and enabled the perpetuation of inaccuracies and misperceptions regarding its past. Given this and the party's ongoing relevance in Lebanon and Syria, a thorough examination of the early history of the SSNP, the political organization and movement that embodied Syrian nationalism's most explicit, most cogent expression is even more necessary. Based on an extensive and thorough examination of Arabic, French, and English primary sources, the monograph is the first comprehensive, systematic history of the SSNP to date, detailing its struggle to fulfill its nationalist vision and establish a secular, independent state in Greater Syria through a thorough analysis of its formation, evolution, and political activities in Lebanon and Syria.

Polynomial and Matrix Computations Dario Bini,Victor Y. Pan,2012-12-06 Our Subjects and Objectives. This book is about algebraic and symbolic computation and numerical computing (with matrices and polynomials). It greatly extends the study of these topics presented in the celebrated books of the seventies, [AHU] and [BM] (these topics have been under-represented in [CLR], which is a highly successful extension and updating of

[AHU] otherwise). Compared to [AHU] and [BM] our volume adds extensive material on parallel computations with general matrices and polynomials, on the bit-complexity of arithmetic computations (including some recent techniques of data compression and the study of numerical approximation properties of polynomial and matrix algorithms), and on computations with Toeplitz matrices and other dense structured matrices. The latter subject should attract people working in numerous areas of application (in particular, coding, signal processing, control, algebraic computing and partial differential equations). The authors' teaching experience at the Graduate Center of the City University of New York and at the University of Pisa suggests that the book may serve as a text for advanced graduate students in mathematics and computer science who have some knowledge of algorithm design and wish to enter the exciting area of algebraic and numerical computing. The potential readership may also include algorithm and software designers and researchers specializing in the design and analysis of algorithms, computational complexity, algebraic and symbolic computing, and numerical computation.
