Nanometer CMOS RFICs for Mobile TV Applications Ahmed A. Youssef, James Haslett, 2010-06-17 Nanometer CMOS RFICs for Mobile TV Applications focuses on how to break the trade-off between power consumption and performance (linearity and noise figure) by optimizing the mobile TV front-end dynamic range in three hierarchical levels: the intrinsic MOSFET level, the circuit level, and the architectural level. It begins by discussing the fundamental concepts of MOSFET dynamic range, including nonlinearity and noise. It then moves to the circuit level introducing the challenges associated with designing wide-dynamic range, variable-gain, broadband low-noise amplifiers (LNAs). The book gives a detailed analysis of a new noise-canceling technique that helps CMOS LNAs achieve a sub - 2 dB wideband noise figure. Lastly, the book deals with the front-end dynamic range optimization process from the systems perspective by introducing the active and passive automatic gain control (AGC) mechanism.

Social TV Mike Proulx, Stacey Shepatin, 2012-01-26 The Internet didn't kill TV! It has become its best friend. Designing a Business Model for Mobile TV on Mobile Devices Stephen Osei-Akoto, 2018-04-26 Master's Thesis from the year 2010 in the subject Business economics - Business Management, Corporate Governance, grade: B, Aalborg University (CMI, Copenhagen Institute of Technology,), course: Masters degree in Information Communication Technology, language: English, abstract: The author studied the business model that will be suitable for deploying Mobile TV as a service to the user/customer, the market players and the providers involved in rolling out such as service. The research which was carried out in this project included finding a suitable business model to drive this service and also looking at the various technologies that is backing the mobile TV service. In order to know what pertains in Ghana and that of the outside world, the author conducted a small survey to seek the views of future and present customers of this service. Their responses were not too different from what have been reported by other surveys and analysts. During the project there was evidence that the operators and providers will need clearly defined roles in order for each member to be committed to the project and also to sustain the service. Despite the challenges outlined by experts in the industry, there is light at the end of the tunnel for Mobile TV service which is yet to be seen. The Europeans, the Americans and the Asians have already taken lead in this service and are constantly researching to make the service affordable, available, and interactive as possible and innovated than the traditional TV.

Next Generation Mobile Broadcasting David Gómez-Barquero, 2013-04-25 Next Generation Mobile Broadcasting provides an overview of the past, present, and future of mobile multimedia broadcasting. The first part of the book—Mobile Broadcasting Worldwide—summarizes next-generation mobile broadcasting technologies currently available. This part covers the evolutions of the Japanese mobile broadcasting standard ISDB-T One-Seg, ISDB-Tmm and ISDB-TSB; the evolution of the South Korean T-DMB mobile broadcasting technology AT-DMB; the American mobile broadcasting standard

ATSC-M/H; the Chinese broadcasting technologies DTMB and CMMB; second-generation digital terrestrial TV European standard DVB-T2 and its mobile profile T2-Lite; and the multicast/broadcast extension of 4G LTE cellular standard E-MBMS. This part includes a chapter about a common broadcast specification of state-of-the-art 3GPP and DVB standards to provide a broadcast overlay optimized for mobile and operated in conjunction with a broadband unicast access. It also contains an overview chapter on a new High-Efficiency Video Coding (HEVC) standard that is expected to provide significantly improved coding efficiency compared to current MPEG-4 AVC video coding. The second part of the book—Next-Generation Handheld DVB Technology: DVB-NGH—describes the latest mobile broadcast technology known as Digital Video Broadcasting-Next-Generation Handheld (DVB-NGH), which is expected to significantly outperform all existing technologies in both capacity and coverage. DVB-NGH introduces new technological solutions that along with the high performance of DVB-T2 make DVB-NGH a powerful next-generation mobile multimedia broadcasting technology. In fact, DVB-NGH can be regarded as the first 3G broadcasting system because it allows for the possibility of using multiple input multiple output MIMO antenna schemes to overcome the Shannon limit of single antenna wireless communications. DVB-NGH also allows the deployment of an optional satellite component forming a hybrid terrestrial-satellite network topology to improve coverage in rural areas where the installation of terrestrial networks is economically unfeasible. Although the commercial deployment of DVB-NGH is nowadays unclear after its standardization, it will be a reference point for future generations of digital terrestrial television technologies. Edited by a member of the DVB-NGH standardization group, the book includes contributions from a number of standardization groups worldwide—including Digital Video Broadcasting (DVB) in Europe; Advanced Television Systems Committee (ATSC) in the US, Korea, Japan, and China; Third Generation Partnership Project (3GPP); and the Moving Picture Experts Group (MPEG).
