TYPIX Standardized Data and Crystal Chemical Characterization of Inorganic Structure Types Erwin Parthé,Louise Gelato,Bernard Chabot,Marinella Penzo,Karin Cenxual,Roman Gladyshevskii,2013-11-11 TYPIX is a critical compilation of crystallographic data prepared by E. Parthé at the University of Geneva. It contains over 3200 compounds representative of the structure types found among inorganic compounds. This work contains condensed crystal chemical information about individual structure types as well as an extensive chapter on the crystal chemistry of particular structure families. The aim of the compilation is to clarify and classify published data for intermetallic and other inorganic structures (types found exclusively with halides or oxides are only included for a few special cases). It provides a tool for additional crystal chemical studies and the development of new materials.
