Entertaining and factually rigorous, Hidden Histories will help you decipher the story of our landscape through the features you can see around you. This Spotter's Guide arms the amateur explorer with the crucial information needed to 'read' the landscape and spot the human activities that have shaped our green and pleasant land. Specially commissioned illustrations bring to life the processes that shaped the landscape - from medieval ploughing to Roman road building - and stand-alone capsules explore interesting aspects of history such as the Highland Clearances or the coming of Christianity. This unique guide uncovers the hidden stories behind the country's landscape, making it the perfect companion for an exploration of our green and pleasant land.

Mobile Radio Network Design in the VHF and UHF Bands Adrian Graham, Nicholas C. Kirkman, Peter M. Paul, 2007-01-11 An essential element of radio technology and propagation is how to use radio technology and knowledge of radio propagation to design a network that meets the needs of customers. Mobile Radio Network Design in the VHF and UHF Bands provides the technical and fundamental knowledge required for advanced mobile radio network design to achieve this in terms that the engineer will understand, and augments this with essential information gleaned from the authors' extensive experience in mobile radio network design. In this book you will find out how some of the most highly-regarded radio network designers around go about designing radio networks that actually meet the needs of the network subscriber and of the network operator. It describes a well-proven framework that meets the essential need of ensuring that each step of the design project is carried out against known, unique and unambiguous requirements, and that these requirements have been extensively validated against the original requirements. Reveals the secrets behind coverage design, capacity planning, interference analysis and reduction, frequency assignment and verifying that the delivered network actually performs as promised Introduces the concept of documentary deliverables as part of the project and underlines the need for method statements, user requirement, functional, test and design specifications Provides readers with a far greater understanding of the methods and processes necessary to bring about the successful completion of a radio network project Highlights vital aspects of radio network projects that are not always apparent to every engineer, but which may have a vital impact on the success of the project The powerful approach used in this book will help to ensure the successful completion of every project and will be the basis for ensuring contractual compliance at every stage. It is an indispensable resource for all radio network design consultants and engineers, network operator technical managers, radio regulation engineers and military radio network planners.

Renewable Energy Andy McCrea, 2013-03-01 Every day there are news reports that highlight spiralling energy costs, accelerating energy consumption, serious concerns over fuel security and fears that oil production may soon decline. All such reports are set against a background of the most serious threat to the world today - global warming and the devastating impact of climate change. This informative and wide-ranging book, written by an acknowledged expert, demonstrates how renewable energy technologies can help meet CO2 reduction targets. The author emphasizes that we need to use these technologies on a much wider scale to produce heat and electricity, and argues that if action is taken immediately it could make an enormous difference. He demonstrates how by installing a renewable energy technology in your home, you will be taking a step towards reducing your carbon footprint and ultimately you will be helping to save the planet. Now in a fully updated edition, this invaluable and well-illustrated book reviews

the range of currently available renewable technologies that can provide energy as heat and electricity for our homes, businesses and industry, and also save harmful emissions, energy and money. The technologies are: Solar energy using solar panels for hot water and electricity; Heat pumps, which take heat from the ground for homes and buildings; Biomass fuels such as wood and waste, and even specially grown crops; Wind power, which can provide us with significant amounts of electricity in the decades ahead; Hydroelectricity where suitable rivers and streams are available; The potential of emerging technologies such as geothermal, wave and tidal power. An invaluable and informative book that demonstrates how renewable energy technologies can help meet CO2 reduction targets. Installing a renewable energy technology in your home will be a step towards reducing your carbon footprint. Reviews the currently available renewable technologies that can provide energy for home, businesses and industry. Superbly illustrated with 78 colour photographs and 20 diagrams. Andy McCrea is a Chartered Engineer and was awarded an MBE for services to the electricity industry in 2004.

Spatial Technology and Archaeology David Wheatley, Mark Gillings, 2013-02-05 Geographical Information Systems (GIS) and related spatial technologies have a new and powerful role to play in archaeological interpretation. Beginning with a conceptual approach to the representation of space adopted by GIS, this book examines spatial databases; the acquisition and compilation of data; the analytical compilation of data; the analytical functionality of GIS; and the creation and utilization of critical foundation data layers such as the Digital Elevation Model (DEM). The ways in which GIS can most usefully facilitate archaeological analysis and interpretation are then explored particularly as a tool for the management of archaeological resources. Formal analysis of archaeological material, and the use of trend surface, contouring and interpolation procedures are considered along with predictive modeling analysis of visibility and intervisibility. Finally there is a discussion of leading-edge issues, including three-dimensional GIS, object-oriented GIS, the relationship between GIS and 'Virtual Reality' technologies, and the integration of GIS with distributed systems and the Internet. The approach is light, and technical detail is kept to a minimum, recognizing that most readers are simply interested in using GIS effectively. The text is carefully illustrated with worked case-studies using archaeological data. Spatial Technology and Archaeology provides a single reference source for archaeologists, students, professionals, and academics in archaeology as well as those in anthropology and related disciplines.

Boundary-Layer Meteorology 25th Anniversary Volume, 1970-1995 John R. Garratt,P.A. Taylor,2013-11-11 The journal Boundary-Layer Meteorology was started in 1970 and has become the premier vehicle for the publication of research papers in its field. Dr R.E. Munn served as Editor-in-Chief until recently. The special 25th Anniversary volume, on which this book is based, was compiled from review and other articles solicited and selected as a 'Festschrift' to honour Ted Munn's achievement as editor of the journal over that time. Articles by leading contributors to the field include reviews of field studies (Askervein, HEXOS, Cabauw) and their impacts; numerical modelling (large-eddy simulation of the surface layer, frontal structures); analyses and critical discussions (of the von Karman constant, bulk aerodynamic formulations, air-sea interaction, vegetation canopies); and reviews or previews of progress in our understanding of the atmospheric boundary layer, turbulence simulation, Lagrangian descriptions of turbulent diffusion and remote sensing of the boundary layer. The collection provides an excellent perspective on the state of the subject and where it is headed. It should provide fascinating and stimulating reading for researchers and students of boundary-layer meteorology and related areas.
