*The Triumph of Injustice: How the Rich Dodge Taxes and How to Make Them Pay* Emmanuel Saez, Gabriel Zucman, 2019-10-15 America's runaway inequality has an engine: our unjust tax system. Even as they became fabulously wealthy, the ultra-rich have had their taxes collapse to levels last seen in the 1920s. Meanwhile, working-class Americans have been asked to pay more. The Triumph of Injustice presents a forensic investigation into

this dramatic transformation, written by two economists who revolutionized the study of inequality. Eschewing anecdotes and case studies, Emmanuel Saez and Gabriel Zucman offer a comprehensive view of America's tax system, based on new statistics covering all taxes paid at all levels of government. Their conclusion? For the first time in more than a century, billionaires now pay lower tax rates than their secretaries. Blending history and cutting-edge economic analysis, and writing in lively and jargon-free prose, Saez and Zucman dissect the deliberate choices (and sins of indecision) that have brought us to today: the gradual exemption of capital owners; the surge of a new tax avoidance industry, and the spiral of tax competition among nations. With clarity and concision, they explain how America turned away from the most progressive tax system in history to embrace policies that only serve to compound the wealth of a few. But *The Triumph of Injustice* is much more than a laser-sharp analysis of one of the great political and intellectual failures of our time. Saez and Zucman propose a visionary, democratic, and practical reinvention of taxes, outlining reforms that can allow tax justice to triumph in today's globalized world and democracy to prevail over concentrated wealth. A pioneering companion website allows anyone to evaluate proposals made by the authors, and to develop their own alternative tax reform at [taxjusticenow.org](http://taxjusticenow.org).

**Mental Math** Abhishek VR, 2019-05-19 Discover the Mental Math Secrets to Become a Human Calculator! Schools taught you a way to do math that works when you have a pen & paper. But the same methods, takes a lot of effort when you have to do math in your head. This is because it uses a lot of your working memory (the short term memory used to complete a mental task). For example, try to mentally multiply  $73,201 \times 3$ . It might take only a few seconds to multiply the individual digits. But if you multiply right to left the way you learnt in school, you will rely on your working memory. You will use it to recall every single digit you calculate to put it back together and get your final answer. You may even find yourself calculating some digits again because you forgot one of the numbers. The difficulty increases further when you have to multiply larger numbers like  $732 \times 323$ . You will have to remember numbers across many steps. Mental arithmetic would be a lot easier to do in your head if you didn't have to remember so many numbers. In school, you learnt to write the down numbers as you calculate to free up your working memory. In mental math, there are many other ways to do the same thing. One of the tricks to free up your working memory is to calculate from left to right instead of right to left. Try multiplying  $73,201 \times 3$  from left to right, starting from  $7 \times 3$  and ending with  $1 \times 3$ . You will find yourself calling out the answer before you even finish the whole problem. You can use this trick to solve any math problem in the future. But we have just scratched the surface. There are many more tricks inside the book that make doing mental math as easy as reading a comic. Here is a glimpse of what you will be able to master:

- Mentally add large numbers (Example: Add  $8739 + 5492$  in your head in seconds)
- Subtract numbers fast. (Example: Mentally subtract  $7520 - 4998$  without writing anything down)
- Multiplication tricks to multiply three-digit numbers. (Example: Multiply  $323 \times 123$  in your head)
- Square large numbers in seconds (Example: Calculate  $64 \times 64$  faster than a calculator)
- Mentally divide large numbers (Example: Divide  $601324$  by  $73$  entirely in your head)
- Quickly check a calculation with 90% accuracy without re-calculating
- Overcome math anxiety
- Cement your mental math skills with bonus weekly training.
