Handbook of the Media in Asia Shelton A Gunaratne, 2000-07-27 This volume provides a fresh look at the media in Asia. It complements the work of the Euromedia Research Group on the media in Western Europe, and supplements with updated information earlier works on the media in Asia and its sub-regions. While providing a predominantly Asian interpretation of Asian media, the handbook is not in disharmony with Western interpretation. The Handbook draws together contributions from over thirty experts, which have been placed within the customary division of Asia into South, Southeast, and East.

Sepsis Management in Resource-limited Settings Arjen M. Dondorp, Martin W. Dünser, Marcus J. Schultz, 2019-02-08 This book is open access under a CC BY 4.0 license. It constitutes a unique source of knowledge and guidance for all healthcare workers who care for patients with sepsis and septic shock in resource-limited settings. More than eighty percent of the worldwide deaths related to sepsis occur in resource-limited settings in low and middle-income countries. Current international sepsis guidelines cannot be implemented without adaptations towards these settings, mainly because of the difference in local resources and a different spectrum of infectious diseases causing sepsis. This prompted members of the Global Intensive Care working group of the European Society of Intensive Care Medicine (ESICM) and the Mahidol-Oxford Tropical Medicine Research Unit (MORU, Bangkok, Thailand) - among which the Editors - to develop with an international group of experts a comprehensive set of recommendations for the management of sepsis in resource-limited settings. Recommendations are based on both current scientific evidence and clinical experience of clinicians working in resource-limited settings. The book includes an overview chapter outlining the current challenges and future directions of sepsis management as well as general recommendations on the structure and organization of intensive care services in resource-limited settings. Specific recommendations on the recognition and management of patients with sepsis and septic shock in these settings are grouped into seven chapters. The book provides evidence-based practical guidance for doctors in low and middle income countries treating patients with sepsis, and highlights areas for further research and discussion.

Population-Based Nutrition Epidemiology Demosthenes Panagiotakos, 2021-01-29 Nutritional epidemiology examines dietary or nutritional factors in relation to the occurrence of disease in various populations. It is a fact that substantial progress has been made in recent years in nutritional epidemiology. Compared to the practice during the 1990s, and with the improvements in data analytics, several new approaches are gaining ground. Results from a variety of large-scale studies in the field of nutrition epidemiology have substantially contributed toward the evidence used in guiding dietary recommendations for the prevention of cardiovascular diseases, metabolic disorders, some types of cancer, and other morbidities. In this Special Issue, we would like to bring readers closer to the state-of-the-art in the field by gathering papers covering different aspects of nutrition epidemiology from population-based observational studies. Topics of the submitted articles may, but not necessarily, include eating habits of various populations, especially of those not well-studied, such as in Africa, Oceania, South Americas, immigrants, minorities, as well as a variety of associations between nutrients/foods/food patterns and chronic diseases, like cardiovascular, diabetes, obesity, cancer, etc., and gene-nutrient and epigenome-nutrient interactions related to human health at all ages.

Uganda International Monetary Fund. Statistics Dept., 2017-10-06 This Technical Assistance Report discusses the technical advice and recommendations given by the IMF mission to the authorities of Uganda regarding compilation of quarterly national accounts statistics. The finalization of the supply and use tables has involved incorporation of significantly revised source data for a number of industries since November 2013, as well as changes in the input data resulting from the implementation of methodological improvements. The Uganda Bureau of Statistics has also made a significant effort to finalize the source data and improve coverage of the economy over the past six months, resulting in revised data for a number of industries. The net impact has been to increase the GDP level by economic activity.

Fiscal Federalism and Decentralization in Mongolia Ariunaa Lkhagvadorj, 2010 Fiscal federalism has been an important topic among public finance theorists in the last four decades. There is a series of arguments that

decentralization of governments enhances growth by improving allocation efficiency. However, the empirical studies have shown mixed results for industrialized and developing countries and some of them have demonstrated that there might be a threshold level of economic development below which decentralization is not effective. Developing and transition countries have developed a variety of forms of fiscal decentralization as a possible strategy to achieve effective and efficient governmental structures. A generalized principle of decentralization due to the country specific circumstances does not exist. Therefore, decentralization has taken place in different forms in various countries at different times, and even exactly the same extent of decentralization may have had different impacts under different conditions. The purpose of this study is to investigate the current state of the fiscal decentralization in Mongolia and to develop policy recommendations for the efficient and effective intergovernmental fiscal relations system for Mongolia. Within this perspective the analysis concentrates on the scope and structure of the public sector, the expenditure and revenue assignment as well as on the design of the intergovernmental transfer and sub-national borrowing. The study is based on data for twenty-one provinces and the capital city of Mongolia for the period from 2000 to 2009. As a former socialist country Mongolia has had a highly centralized governmental sector. The result of the analysis below revealed that the Mongolia has introduced a number of decentralization measures, which followed a top down approach and were slowly implemented without any integrated decentralization strategy in the last decade. As a result Mongolia became de-concentrated state with fiscal centralization. The revenue assignment is lacking a very important element, for instance significant revenue autonomy given to sub-national governments, which is vital for the efficient service delivery at the local level. According to the current assignments of the expenditure and revenue responsibilities most of the provinces are unable to provide a certain national standard of public goods supply. Hence, intergovernmental transfers from the central jurisdiction to the sub-national jurisdictions play an important role for the equalization of the vertical and horizontal imbalances in Mongolia. The critical problem associated with intergovernmental transfers is that there is not a stable, predictable and transparent system of transfer allocation. The amount of transfers to sub-national governments is determined largely by political decisions on ad hoc basis and disregards local differences in needs and fiscal capacity. Thus a fiscal equalization system based on the fiscal needs of the provinces should be implemented. The equalization transfers will at least partly offset the regional disparities in revenues and enable the sub-national governments to provide a national minimum standard of local public goods.

Eurasian Steppes. Ecological Problems and Livelihoods in a Changing World Marinus J.A. Werger, Marja A. van Staalduinen, 2012-06-14 Steppes form one of the largest biomes. Drastic changes in steppe ecology, land use and livelihoods came with the emergence, and again with the collapse, of communist states. Excessive ploughing and vast influx of people into the steppe zone led to a strong decline in nomadic pastoralism in the Soviet Union and China and in severely degraded steppe ecosystems. In Mongolia nomadic pastoralism persisted, but steppes degraded because of strongly increased livestock loads. After the Soviet collapse steppes regenerated on huge tracts of fallow land. Presently, new, restorative steppe land management schemes are applied. On top of all these changes come strong effects of climate change in the northern part of the steppe zone. This book gives an up-to-date overview of changes in ecology, climate and use of the entire Eurasian steppe area and their effects on livelihoods of steppe people. It integrates knowledge that so far was available only in a spectrum of locally used languages.

Health Systems Performance Assessment Christopher J. L. Murray, David B. Evans, 2003-11-06 The World Health Report 2000 has generated considerable media attention, controversy in some countries, and debate in academic journals. This volume brings together in one place the substance of many of these key debates and reports, methodological advances, and new empiricism reflecting the evolution of the WHO approach since the year 2000. Specifically, the volume presents many differing regional and technical perspectives on key issues, major new methodological developments, and a quantum increase in the empirical basis for cross-country performance assessment. It also gives the full report of the Scientific Peer Review Group's exhaustive assessment of these new approaches.

WJP Rule of Law Index 2015, 2015-06-02 The rule of law provides the foundation for communities of opportunity and equity - communities that offer sustainable economic development, accountable government, and respect for fundamental rights. Executive Summary The World Justice Project (WJP) joins efforts to produce reliable data on rule of law through the WJP Rule of Law Index 2015, the fifth report in an annual series, which measures rule of law based on the experiences and perceptions of the general public and in-country experts worldwide. We hope this annual publication, anchored in actual experiences, will help identify strengths and weaknesses in each country under review and encourage policy choices that strengthen the rule of law. The WJP Rule of Law Index 2015 presents a portrait of the rule of law in each country by providing scores and rankings organized around nine factors: constraint on government powers, absence of corruption, open government, fundamental rights, order and security, regulatory enforcement, civil justice, criminal justice, and informal justice. These factors are intended to reflect how people experience rule of law in everyday life. The country scores and rankings for the WJP Rule of Law Index 2015 are derived from more than 100,000 household and expert surveys in 102 countries and jurisdictions. The Index is the world's most comprehensive data set of its kind and the only to rely solely on primary data, measuring a nation's adherence to the rule of law from the perspective of how ordinary people experience it. These features make the Index a powerful tool that can help identify strengths and weaknesses in each country, and help to inform policy debates, both within and across countries, that advance the rule of law.
