Jade Taniwha Jenny Bol Jun Lee, 2007-01-01 This book provides a detailed historical and sociological context for Maori-Chinese New Zealanders concentrating on the role that schooling has played in the formation of their identity. Lee (Ngati Mahuta, Zhong Shan and Taishan Chinese) shows how racism in New Zealand's schools has impacted on members of this community. She shows that the identity of this unique cultural group is the result of a fascinating history on the margins of mainstream New Zealand society, one often intersected by racism, exclusion and colonialism. However, Maori-Chinese draw strength from their different traditions, taking pride in their unique identity while moving between the different worlds of Chinese, Maori and 'mainstream' New Zealand

The SAGE Handbook of Interview Research Jaber F. Gubrium, James A. Holstein, Amir B. Marvasti, Karyn D. McKinney, 2012-02-14 The new edition of this landmark volume emphasizes the dynamic, interactional, and reflexive dimensions of the research interview. Contributors highlight the myriad dimensions of complexity that are emerging as researchers increasingly frame the interview as a communicative opportunity as much as a data-gathering format. The book begins with the history and conceptual transformations of the interview, which is followed by chapters that discuss the main components of interview practice. Taken together, the contributions to The SAGE Handbook of Interview Research: The Complexity of the Craft encourage readers simultaneously to learn the

frameworks and technologies of interviewing and to reflect on the epistemological foundations of the interview craft.

*Evaluating the Brain Disease Model of Addiction*  
Nick Heather, Matt Field, Antony C. Moss, Sally Satel, 2022-03-07 This ground-breaking book advances the fundamental debate about the nature of addiction. As well as presenting the case for seeing addiction as a brain disease, it brings together all the most cogent and penetrating critiques of the brain disease model of addiction (BDMA) and the main grounds for being skeptical of BDMA claims. The idea that addiction is a brain disease dominates thinking and practice worldwide. However, the editors of this book argue that our understanding of addiction is undergoing a revolutionary change, from being considered a brain disease to a disorder of voluntary behavior. The resolution of this controversy will determine the future of scientific progress in understanding addiction, together with necessary advances in treatment, prevention, and societal responses to addictive disorders. This volume brings together the various strands of the contemporary debate about whether or not addiction is best regarded as a brain disease. Contributors offer arguments for and against, and reasons for uncertainty; they also propose novel alternatives to both brain disease and moral models of addiction. In addition to reprints of classic articles from the addiction research literature, each section contains original chapters written by authorities on their chosen topic. The editors have assembled a stellar cast of chapter authors from a wide range of

disciplines – neuroscience, philosophy, psychiatry, psychology, cognitive science, sociology, and law – including some of the most brilliant and influential voices in the field of addiction studies today. The result is a landmark volume in the study of addiction which will be essential reading for advanced students and researchers in addiction as well as professionals such as medical practitioners, psychiatrists, psychologists of all varieties, and social workers.

*A Chancellor's Tale* Ralph Snyderman, 2016-10-14  
During his fifteen years as chancellor, Dr. Ralph Snyderman helped create new paradigms for academic medicine while guiding the Duke University Medical Center through periods of great challenge and transformation. Under his leadership, the medical center became internationally known for its innovations in medicine, including the creation of the Duke University Health System—which became a model for integrated health care delivery—and the development of personalized health care based on a rational and compassionate model of care. In *A Chancellor's Tale* Snyderman reflects on his role in developing and instituting these changes. Beginning his faculty career at Duke in 1972, Snyderman made major contributions to inflammation research while leading the Division of Rheumatology and Immunology. When he became chancellor in 1989, he learned that Duke's medical center required bold new capabilities to survive the advent of managed care and HMOs. The need to change spurred creativity, but it also generated

strong resistance. Among his many achievements, Snyderman led ambitious institutional growth in research and clinical care, broadened clinical research and collaborations between academics and industry, and spurred the fields of integrative and personalized medicine. Snyderman describes how he immersed himself in all aspects of Duke's medical enterprise as evidenced by his exercise in following the sheet from the patient's room to the laundry facilities and back, which allowed him to meet staff throughout the hospital. Upon discovering that temperatures in the laundry facilities were over 110 degrees he had air conditioning installed. He also implemented programs to help employees gain needed skills to advance. Snyderman discusses the necessity for strategic planning, fund-raising, and media relations and the relationship between the medical center and Duke University. He concludes with advice for current and future academic medical center administrators. The fascinating story of Snyderman's career shines a bright light on the importance of leadership, organization, planning, and innovation in a medical and academic environment while highlighting the systemic changes in academic medicine and American health care over the last half century. A Chancellor's Tale will be required reading for those interested in academic medicine, health care, administrative and leadership positions, and the history of Duke University.

Multilevel Modeling of Categorical Outcomes Using IBM SPSS Ronald H Heck,Scott Thomas,Lynn Tabata,2013-05-07 This is the first workbook that introduces the multilevel approach to modeling with categorical outcomes using IBM SPSS Version 20. Readers learn how to develop, estimate, and interpret multilevel models with categorical outcomes. The authors walk readers through data management, diagnostic tools, model conceptualization, and model specification issues related to single-level and multilevel models with categorical outcomes. Screen shots clearly demonstrate techniques and navigation of the program. Modeling syntax is provided in the appendix. Examples of various types of categorical outcomes demonstrate how to set up each model and interpret the output. Extended examples illustrate the logic of model development, interpretation of output, the context of the research questions, and the steps around which the analyses are structured. Readers can replicate examples in each chapter by using the corresponding data and syntax files available at [www.psypress.com/9781848729568](http://www.psypress.com/9781848729568). The book opens with a review of multilevel with categorical outcomes, followed by a chapter on IBM SPSS data management techniques to facilitate working with multilevel and longitudinal data sets. Chapters 3 and 4 detail the basics of the

single-level and multilevel generalized linear model for various types of categorical outcomes. These chapters review underlying concepts to assist with trouble-shooting common programming and modeling problems. Next population-average and unit-specific longitudinal models for investigating individual or organizational developmental processes are developed. Chapter 6 focuses on single- and multilevel models using multinomial and ordinal data followed by a chapter on models for count data. The book concludes with additional trouble shooting techniques and tips for expanding on the modeling techniques introduced. Ideal as a supplement for graduate level courses and/or professional workshops on multilevel, longitudinal, latent variable modeling, multivariate statistics, and/or advanced quantitative techniques taught in psychology, business, education, health, and sociology, this practical workbook also appeals to researchers in these fields. An excellent follow up to the authors' highly successful *Multilevel and Longitudinal Modeling with IBM SPSS and Introduction to Multilevel Modeling Techniques*, 2nd Edition, this book can also be used with any multilevel and/or longitudinal book or as a stand-alone text introducing multilevel modeling with categorical outcomes.

*Nicomachean Ethics* Aristotle, 2017-04-20 EVERY art and every inquiry, and similarly every action and pursuit, is thought to aim at some good; and for this reason the good has rightly been declared to be that at which all things aim. But a certain difference is found among ends; some are activities, others are products apart from the activities that produce them. Where there are ends apart from the actions, it is the nature of the products to be better than the activities. Now, as there are many actions, arts, and sciences, their ends also are many; the end of the medical art is health, that of shipbuilding a vessel, that of strategy victory, that of economics wealth. But

where such arts fall under a single capacity- as bridle-making and the other arts concerned with the equipment of horses fall under the art of riding, and this and every military action under strategy, in the same way other arts fall under yet others- in all of these the ends of the master arts are to be preferred to all the subordinate ends; for it is for the sake of the former that the latter are pursued. It makes no difference whether the activities themselves are the ends of the actions, or something else apart from the activities, as in the case of the sciences just mentioned.❶

*~The Power of Empowerment* David Clutterbuck, Susan Kernaghan, 2005

*Leningrad* Anna Reid, 2011-09-06 On September 8, 1941, eleven weeks after Hitler launched Operation Barbarossa, his brutal surprise attack on the Soviet Union, Leningrad was surrounded. The siege was not lifted for two and a half years, by which time some three quarters of a million Leningraders

had died of starvation. Anna Reid's Leningrad is a gripping, authoritative narrative history of this dramatic moment in the twentieth century, interwoven with indelible personal accounts of daily siege life drawn from diarists on both sides. They reveal the Nazis' deliberate decision to starve Leningrad into surrender and Hitler's messianic miscalculation, the incompetence and cruelty of the Soviet war leadership, the horrors experienced by soldiers on the front lines, and, above all, the terrible details of life in the blockaded city: the relentless search for food and water; the withering of emotions and family ties; looting, murder, and cannibalism- and at the same time, extraordinary bravery and self-sacrifice. Stripping away decades of Soviet propaganda, and drawing on newly available diaries and government records, Leningrad also tackles a raft of unanswered questions: Was the size of the death toll as much the fault of Stalin as of Hitler? Why didn't the Germans capture the city? Why didn't it collapse into anarchy? What decided who lived and who died? Impressive in its originality and literary style, Leningrad gives voice to the dead and will rival Anthony Beevor's classic Stalingrad in its impact.
