Decoding China's Export Miracle: A Global Value Chain Analysis Yuqing Xing,2021-03-17 In less than three decades, China has emerged as the world's largest exporting nation with more than \$2 trillion exports annually. China's quick rise as a leading exporter in the world is an unprecedented miracle. There are many theories explaining this miracle. This book adopts the global value chain (GVC) approach to analyze the Chinese export miracle over the last four decades. It focuses on the tasks rather than the gross export value and emphasizes the organizations of modern trade rather than the national comparative advantage. The GVC approach systematically explains how, in less than four decades China has evolved from a closed economy to the world's No. 1 exporting nation; why China, a developing country, has exported more high-technology products than labor-intensive products to the US; and why almost half of the US trade deficit has originated from China. The book identifies three spillover effects of GVCs that originated from brands, technology and product innovation, and distribution and retail networks of GVCs lead firms. It argues that China's deep integration with GVCs has been a decisive factor for China's emergence as the world's No.1 exporting nation and the champion of high-technology exports. In addition, this book uses iPhone trade and the operation of Apple, the largest factory-less American manufacturer, to explain how current trade statistics exaggerate China's exports to and its trade surplus with the US on the one hand, and underestimate US exports on the other hand. By using the experience of the Chinese mobile phone industry, the book argues that the GVC strategy can be a short-cut for developing countries to achieve industrialization and enable firms of developing countries to enter high-technology sectors despite their intrinsic disadvantages. At this end, the book also discusses the future trajectory of China-centered GVCs under the shadow of the US-China trade war and the COVID-19 pandemic.

The Cardinal Cornerstone for MES Success Daniel B. Cardinal,2014-06-17 Technical Problem or Adaptive Challenge? Before a design organization develops a new computer system to support a manufacturing process, strategists need to understand what they are facing. Will their designers have to confront a series of technical problems or adaptive challenges? Technical problems have known solutions that most designers clearly understand. However, this means they will solve problems using existing organizational practices. An adaptive challenge means the organization will face problems that individually have many possible solutions. To find the correct set of solutions, the organization must experiment and adapt over time. Many design organizations ignore the fundamental differences between technical problems and adaptive challenges. As a result, engineering and IT planners mistakenly believe that they only need to hire specialists to solve technical problems. They expect these specialists to use the latest technologies and/or adopt some agile development process. These technology-focused designs or faith-based processes produce applications that have many undesirable anomalies, idiosyncrasies, and outliers. The information contained in this book enables strategists to stop adapting to challenges and start solving problems. The information defines and describes how low-level design fundamentals affect manufacturing processes and upper-level system designs. It specifically identifies the many technical problems designers will face, variable methods for solving them, and expected outcomes. This information enables an organization to adopt the best practices before starting a design. This sets up a knowledge-based development process where designers understand technical problems, adopt the correct set of fundamentals, and make the necessary improvements to machines and system designs.

Decoding The Rise Of Made-in-china: Why The Continuity Of Catch-up Ladder Ultimately Matters Bin Guo,2023-03-23 This book provides a novel theoretical framework to explain the real source of competitive advantage of Chinese manufacturing. More importantly, such a framework can be

generalized to analyze the potential of catch-up for large emerging economies in the globalization era. The book also provides insights for policy makers to rethink their design of policies. The rise of Made-in-China products has been widely attributed to low labour cost advantage and imitation advantage. However, as these two advantages are nearly innate to all late-developing countries, they cannot be regarded as the key factors that drive the rapid growth of China's manufacturing industry, or China's economy, over the past few decades. In this book, the author proposed a theory – 'the catch-up ladders theory', to explain the rise of China's manufacturing industry. The manufacturing advancement of any country is in essence a process of catching-up in both market and technology, during which enterprises will form a ladder-like holistic structure due to their differences in capabilities, technology and market positioning. In light of this, the continuity of the catch-up ladder will greatly determine the catch-up efficiency of an industry and even a country at large. Such a perspective is more applicable to large emerging economies, especially those with over one hundred million population and thus huge potential domestic market demand.

Decoding Entrepreneurship Kgadi Mmanakana, 2020-04-02 The number one reason I ventured into strategy consulting and entrepreneurship development is because at my core I really want to see businesses that are being started staying in business. I really want to see entrepreneurs starting businesses and becoming CEOs not only on business cards and CIPC certificate but actual CEOs of businesses with payroll, premises, and market share. I decided to start by playing my part at grassroots level – working directly with entrepreneurs and startups, starting from the ground up. And over the past 5 years I have been involved full-time in this work, supporting the building, and launching of businesses, observing the major contributors to startup failure and enablers of business growth. This book is my contribution towards creating an archive of insights focused on enabling business growth for entrepreneurs and startup business owners. Decoding Entrepreneurship is my contribution towards the Entrepreneurship Development Ecosystem archive to serve as an Enterprising Tool that guides aspiring entrepreneurs and business owners on how to go about moving from a state of having a business idea to a state of making money from the idea they have. It builds up on the contribution made by my other work, The Art and Science of Entrepreneurship (2020), which re-introduced entrepreneurship and provided pointers on how to develop entrepreneurial capabilities, as an individual. Decoding Entrepreneurship focuses on turning an idea into a business using Design Thinking. The book provides a step-by-step guide to help you turn your business idea into a business. · Step 1 helps you determine the difference your idea will be bringing. · Step 2 helps you test if there's a market for your idea and if the idea is worth investing in. · Step 3 helps you get a preview of your business and what it will require to launch. · Step 4 provides pointers on how you can finance your business. · Step 5 gives you pointers on how you can position your business in the market to gain competitive advantage over your rivals. · Step 6 guides you on how to go about entering the market and securing your first customer.
