**Total Urban Mobilisation** Krzysztof Nawratek,2018-07-27 In this book Krzysztof Nawratek explores the possibility of a post-capitalist city, and in so doing, reclaims and develops the idea of total mobilisation as originally formulated by Ernst Jünger. Nawratek formulates the idea of 'accumulation of agency' the ability to act, to replace the logic of capital accumulation as a main driver of urban development. He argues that this 'accumulation of agency' operates already in contemporary cities, and should not be seen as essential element of capitalism, but as a conceptual gateway to a post-capitalist world.

**Video Games and Spatiality in American Studies** Dietmar Meinel,2022-02-21 While video games have blossomed into the foremost expression of contemporary popular culture over the past decades, their critical study occupies a fringe position in American Studies. In its engagement with video games, this book contributes to their study but with a thematic focus on a particularly important subject matter in American Studies: spatiality. The volume explores the production, representation, and experience of places in video games from the perspective of American Studies. Contributions critically interrogate the use of spatial myths (wilderness, frontier, or city upon a hill), explore games as digital borderlands and contact zones, and offer novel approaches to geographical literacy. Eventually, Playing the Field II brings the rich theoretical repertoire of the study of space in American Studies into conversation with questions about the production, representation, and experience of space in video games.

*Imagining AI* Oxford,2023-05-25 AI is now a global phenomenon. Yet Hollywood narratives dominate perceptions of AI in the English-speaking West and beyond, and much of the technology itself is shaped by a disproportionately white, male, US-based elite. However, different cultures have been imagining intelligent machines since long before we could build them, in visions that vary greatly across religious, philosophical, literary and cinematic traditions. This book aims to spotlight these alternative visions. Imagining AI draws attention to the range and variety of visions of a future with intelligent machines and their potential significance for the research, regulation, and implementation of AI. The book is structured geographically, with each chapter presenting insights into how a specific region or culture imagines intelligent machines. The contributors, leading experts from academia and the arts, explore how the encounters between local narratives, digital technologies, and mainstream Western narratives create new imaginaries and insights in different contexts across the globe. The narratives they analyse range from ancient philosophy to contemporary science fiction, and visual art to policy discourse. The book sheds new light on some of the most important themes in AI ethics, from the differences between Chinese and American visions of AI, to digital neo-colonialism. It is an essential work for anyone wishing to understand how different cultural contexts interplay with the most significant technology of our time.

**Androids** Chet Haase,2022-07-12 The fascinating inside story of how the Android operating system came to be. In 2004, Android was two people who wanted to build camera software but couldn't get investors interested. Today, Android is a large team at Google, delivering an operating system (including camera software) to over 3 billion devices worldwide. This is the inside story, told by the people who made it happen. Androids: The Team that Built the Android Operating System is a first-hand chronological account of how the startup began, how the team came together, and how they all built an operating system from the kernel level to its applications and everything in between. It describes the tenuous beginnings of this ambitious project as a tiny startup, then as a small acquisition by Google that took on an industry with strong, entrenched competition. Author Chet Haase joined the Android team at Google in May 2010 and later recorded conversations with team members to preserve the early days of Android's history leading to the launch of 1.0. This engaging and accessible book captures the developers' stories in their own voices to answer the question: How did Android succeed?

**Do Android Crows Fly Over the Skies of an Electronic Tokyo?** Akira Suzuki,2001 'It is difficult to describe Tokyo in terms of traditional urbanism. Its population is extremely fluid and capricious. It has no tradition of architectural culture, its infrastructure is quite haphazard, and its local communities -- recently even the family unit -- have begun to disintegrate.' The impact on Japanese cities of social and technological change is the focus of this collection of essays by Akira Suzuki, editor of Telescope magazine and Professor of Design at Kobe University. Entertaining, but equally thought-provoking, the essays describe urban rituals and catastrophes, and suggest lessons that might be learnt from them. Progressing in scale from the minimal dwelling space for the single urbanite to the dispersed urban infrastructure, they put forward a new conception of urbanism that takes account of the changes in information technology that have begun to render national boundaries meaningless.
