Children's Creative Inquiry in STEM Karen Janette Murcia,Coral Campbell,Mathilda Marie Joubert,Sinead Wilson,2022-04-05 This edited volume brings together international research that explores children's creativity in STEM inquiry. It takes the position that creativity is relevant in all aspects of life and is essential for adaptable and innovative thinking. The research informed content of the book, highlights both challenges and opportunities for growing children's creativity. The book focuses on fostering children's creativity and natural curiosity in the world around them through STEM inquiry. Through STEM inquiry, children are learning through a cross- disciplinary approach where they apply concepts from multiple fields as they are thinking creatively, problem solving and constructing solutions. Educators play a critical role in encouraging children's creativity by modelling creativity, providing creative projects for children and importantly, establishing rich culturally connected environments where children have the resources, conditions and opportunities for acting and thinking creatively. The book provides a lens for looking at children's creativity in a range of different cultural settings. It offers insight and guidance to future research and will build educators' capacity for developing children's creative practices.

Balanced Development Howard W. Dick,James J. Fox,J. A. C. Mackie,1993 With a population nearly twice that of Malaysia and a diverse economic base, East Java is a substantial economy in its own right, even though its administrative status is merely that of a province of Indonesia. This book deals with various aspects of the economic and social development of this important region of South-East Asia since the late 1960s.

Rare Event Simulation using Monte Carlo Methods Gerardo Rubino,Bruno Tuffin,2009-03-18 In a probabilistic model, a rare event is an event with a very small probability of occurrence. The forecasting of rare events is a formidable task but is important in many areas. For instance a catastrophic failure in a transport system or in a nuclear power plant, the failure of an information processing system in a bank, or in the communication network of a group of banks, leading to financial losses. Being able to evaluate the probability of rare events is therefore a critical issue. Monte Carlo Methods, the simulation of corresponding

models, are used to analyze rare events. This book sets out to present the mathematical tools available for the efficient simulation of rare events. Importance sampling and splitting are presented along with an exposition of how to apply these tools to a variety of fields ranging from performance and dependability evaluation of complex systems, typically in computer science or in telecommunications, to chemical reaction analysis in biology or particle transport in physics. Graduate students, researchers and practitioners who wish to learn and apply rare event simulation techniques will find this book beneficial.

Energy-Efficient Electric Motors, Revised and Expanded Ali Emadi, 2018-10-03 This detailed reference provides guidelines for the selection and utilization of electric motors for improved reliability, performance, energy-efficiency, and life-cycle cost. Completely revised and expanded, the book reflects the recent state of the field, as well as recent developments in control electronics, the economics of energy-efficient motors and systems, and advanced power electronic drivers. It includes five new chapters covering key topics such as the fundamentals of power electronics applicable to electric motor drives, adjustable speed drives and their applications, advanced switched reluctance motor drives, and permanent magnet and brushless DC motor drives.

Evaluation and Installation of Surgical Laser Systems David B. Apfelberg, 2012-12-06 The advent in the 1960s of the unique and exciting new form of energy called laser brought to medicine a marvelous tool that could accomplish new treatments of previously untreatable disorders as well as improved treatment of mundane problems. This brilliant form of light energy is many times more powerful than the energy of the sun yet can be focused microscopically to spot sizes as small as 30 microns. Lasers can be directed into seemingly inaccessible areas by mirrors or fiberoptic cables or can be directly applied into sensitive areas such as the retina without damage to intervening structures. There has been a rapid proliferation in the use of lasers in all surgical specialties. Starting with bold ideas and experiments of thought leaders in each specialty, the application of lasers has evolved into commonplace usage. Beginning with the era when laser presentations and publications were an oddity, now nearly all specialty areas have whole sections of meetings or journals devoted exclusively to laser usage. Laser specialty societies within a specialty have developed and residency training programs routinely instruct trainees in laser techniques. Basic science and clinical experimentation has supported laser knowledge. Laser usage has also become international. Newer wavelengths and accessories have added to the armamentarium of laser usage. Despite the rapid growth in laser interest, no single source exists to instruct the many new laser users in proper, safe, and effective use of this new modality.

Machining, Joining and Modifications of Advanced Materials Andreas Öchsner, Holm Altenbach, 2016-06-23 This book presents the latest advances in mechanical and materials engineering applied to the machining, joining and modification of modern engineering materials. The contributions cover the classical fields of casting, forming and injection moulding as representative manufacturing methods, whereas additive manufacturing methods (rapid prototyping and laser sintering) are treated as more innovative and recent technologies that are paving the way for the manufacturing of shapes and features that traditional methods are unable to deliver. The book also explores water jet cutting as an innovative cutting technology that avoids the heat build-up typical of classical mechanical cutting. It introduces readers to laser cutting as an alternative technology for the separation of materials, and to classical bonding and friction stir welding approaches in the context of joining technologies. In many cases, forming and machining technologies require additional post-treatment to achieve the required level of surface quality or to furnish a protective layer. Accordingly, sections on laser treatment, shot peening and the production of protective layers round out the book's coverage.

Accounting for Ministers Samuel Berlinski,Torun Dewan,Keith Dowding,2012-03-15 Uses the tools of modern political science to analyse the factors which determine the fortunes of Cabinet ministers.

Human Development in Iraq Bassam Yousif,2013-06-17 This systematic evaluation of Iraq's political economy and human development offers a complex and sophisticated analysis of Iraq's recent history. Focusing on the period from 1950 up to the Gulf war in 1990, the book brings an understanding of how development has been shaped or constrained in this much misunderstood country. The author employs the human development paradigm to link human development and human rights to the analysis of political economy. The resulting scholarship, on income and investment, education and health, the status of women, and human rights, presents a nuanced, balanced - but critical - appraisal of the complex interrelationships between economic growth and development and illustrates the fragility of that development, especially when political institutions fail to keep up with the rapid expansion in human capabilities. Providing the historical analysis needed to understand Iraq's current political situation, this book will be of great interest to scholars of development studies, Iraq, and political economy.
