Hemodynamic Monitoring Michael R. Pinsky, Jean-Louis Teboul, Jean-Louis Vincent, 2019-02-21 This book, part of the European Society of Intensive Care Medicine textbook series, teaches readers how to use hemodynamic monitoring, an essential skill for today's intensivists. It offers a valuable guide for beginners, as well as for experienced intensivists who want to hone their skills, helping both groups detect an inadequacy of perfusion and make the right choices to achieve the main goal of hemodynamic monitoring in the critically ill, i.e., to correctly assess the cardiovascular system and its response to tissue oxygen demands. The book is divided into distinguished sections: from physiology to pathophysiology; clinical assessment and measurements; and clinical practice achievements including techniques, the basic goals in clinical practice as well as the more appropriate hemodynamic therapy to be applied in different conditions. All chapters use a learning-oriented style, with practical examples, key points and take home messages, helping readers quickly absorb the content and, at the same time, apply what they have learned in the clinical setting. The European Society of Intensive Care Medicine has developed the Lessons from the ICU series with the vision of providing focused and state-of-the-art overviews of central topics in Intensive Care and optimal resources for clinicians working in Intensive Care.

Sepsis Management in Resource-limited Settings Arjen M. Dondorp, Martin W. Dünser, Marcus J. Schultz, 2019-02-08 This book is open access under a CC BY 4.0 license. It constitutes a unique source of knowledge and guidance for all healthcare workers who care for patients with sepsis and septic shock in resource-limited settings. More than eighty percent of the worldwide deaths

related to sepsis occur in resource-limited settings in low and middle-income countries. Current international sepsis guidelines cannot be implemented without adaptations towards these settings, mainly because of the difference in local resources and a different spectrum of infectious diseases causing sepsis. This prompted members of the Global Intensive Care working group of the European Society of Intensive Care Medicine (ESICM) and the Mahidol-Oxford Tropical Medicine Research Unit (MORU, Bangkok, Thailand) - among which the Editors – to develop with an international group of experts a comprehensive set of recommendations for the management of sepsis in resource-limited settings. Recommendations are based on both current scientific evidence and clinical experience of clinicians working in resource-limited settings. The book includes an overview chapter outlining the current challenges and future directions of sepsis management as well as general recommendations on the structure and organization of intensive care services in resource-limited settings. Specific recommendations on the recognition and management of patients with sepsis and septic shock in these settings are grouped into seven chapters. The book provides evidence-based practical guidance for doctors in low and middle income countries treating patients with sepsis, and highlights areas for further research and discussion.

Handbook of ICU Therapy Ian McConachie,2006-01-12 Handbook of ICU Therapy provides rapid access to important information on the treatment of the critically ill patient. It comprises a series of 'cutting edge' reviews of the most advanced treatment concepts available in the modern ICU. Whilst assuming a basic knowledge of underlying conditions, it nonetheless outlines key physiological principles where necessary, and critically reviews current literature and best practice. The heart of the book is aimed at providing key practical information on treatment techniques to the busy clinician in an easily accessible style. In addition to conventional drug therapy, ventilator, fluid and physical therapies are also discussed in detail. All of the authors are directly involved in ICU research and practice and are familiar with all of the latest developments in this fast-moving field of medicine.

High-Risk IV Medications in Special Patient Populations Sandra Kane-Gill, Joseph Dasta, 2011-06-27
Critical Care Clinicians can use general drug references (Micromedex, Lexicomp) for data on dosing of high-alert medications in special patient populations but these references are not available to all healthcare clinicians, they are expensive and they are not specific to high-alert medications or critically ill patients. Doctors, nurses and pharmacists in the hospital setting will benefit from having one resource with all of this information. The purpose of this reference manual would be to guide critical care clinicians on dosing of high-alert medications in special patient populations. The most important feature of the book will be a summary of primary literature using tables when possible. This will be useful to readers because currently a reference book does not exist that guides clinicians in these difficult dosing decisions.

Vasoplegic Endothelial Dysfunction Paulo Roberto Barbosa Évora, Andrea Carla Celotto, Agnes Afrodite Sumarelli Albuquerque, Patricia Martinez

Évora, 2021-05-31 This unique work presents one of the most significant organ failure conditions – cardiocirculatory shock – and the prominent role of Methylene Blue (MB). Through their extensive experience, the authors consider that the lifesaving feature of MB is still underestimated. For this reason they outline key concepts of MB, mentioning essential experimental data, yet focusing mainly on its application in the care of critically ill patients. In an easy-to-read format, the 18 chapters were organized in a didactically structured order, distributed in four parts. The first part introduces the general conceptual aspects and physiology of the endothelium. The second part presents the particularities of endothelial dysfunction in different types of shock. Methylene blue is discussed in detail in the third part. In the fourth part, particular situations of endothelial dysfunction, such as heart surgery and organ transplantation, are described. Additionally, the two complementary subjects of acid-base balance and the therapeutic use of inhaled nitric oxide are mentioned. Finally, looking for therapeutic alternatives for what we classify as vasoplegic endothelial dysfunction, MB remains promising as an adjuvant to sympathomimetic amines. The combination of three recently proposed concepts may be useful in obtaining better results against the high mortality rates in critically ill patients. These three concepts are wide-spectrum vasopressors, vasopressor economy strategies, and microcirculation protection against the harmful effects of using high concentrations of amines. This book's translational approach will appeal to a variety of readers within the health specialties of medicine, biomedicine, physiotherapy, nursing, odontology, and basic science.
