Thanks for Watching Patricia G. Lange, 2019-11-15 YouTube hosts one billion visitors monthly and sees more than 400 hours of video uploaded every minute. In her award winning book, Thanks for Watching, Patricia G. Lange offers an anthropological perspective on this heavily mediated social environment by analyzing videos and the emotions that motivate sharing them. She demonstrates how core concepts from anthropology—participant-observation, reciprocity, and community—apply to sociality on YouTube. Lange's book reconceptualizes and updates these concepts for video-sharing cultures. Lange draws on 152 interviews with YouTube participants at gatherings throughout the United States, content analyses of more than 300 videos, observations of interactions on and off the site, and participant-observation. She documents how the introduction of monetization options impacted perceived opportunities for open sharing and creative exploration of personal and social messages. Lange's book provides new insight into patterns of digital migration, YouTube's influence on off-site interactions, and the emotional impact of losing control over images. The book also debunks traditional myths about online interaction, such as the supposed online/offline binary, the notion that anonymity always degrades public discourse, and the popular characterization of online participants as over-sharing narcissists. YouTubers' experiences illustrate fascinating hybrid forms of contemporary sociality that are neither purely mediated nor sufficient when conducted only in person. Combining intensive ethnography, analysis of video artifacts, and Lange's personal vlogging experiences, the book explores how YouTubers are creating a posthuman collective characterized by interaction, support, and controversy. In analyzing the tensions between YouTubers' idealistic goals of sociality and the site's need for monetization, Thanks for Watching makes crucial contributions to cultural anthropology, digital ethnography, science and technology studies, new media studies, communication, interaction design, and posthumanism. For its perceptive analysis of video blogging for self-expression and sociality, Thanks for Watching received the Franklyn S. Haiman Award for Distinguished Scholarship in Freedom of Expression (2020), from the National Communication Association.

The Legal Framework for Video-Sharing Platforms European Audiovisual Observatory, Council of Europe, Francisco Javier Cabrera, 2018-10-04 With the announcement in July that Instagram has launched a new video sharing platform - IGTV - it's clear that VSPs are this season's hot topic. But what rules do they have to respect? How does European legislation sheriff the wild wild west of content sharing platforms such as YouTube? And what of Facebook? How does European law define their role and responsibilities? This brand new study is authored by the Observatory's legal and market experts and the report was presented at a Video Sharing Platform (VSP) conference in Paris at the beginning of June.

YouTube Jean Burgess, Joshua Green, 2013-04-16 YouTube is one of the most well-known and widely discussed sites of participatory media in the contemporary online environment, and it is the first genuinely mass-popular platform for user-created video. In this timely and comprehensive introduction to how YouTube is being used and why it matters, Burgess and Green discuss the ways that it relates to wider transformations in culture, society and the economy. The book critically examines the public debates surrounding the site, demonstrating how it is central to struggles for authority and control in the new media environment. Drawing on a range of theoretical sources and empirical research, the authors discuss how YouTube is being used by the media industries, by audiences and amateur producers, and by particular communities of interest, and the ways in which these uses challenge existing ideas about cultural 'production' and 'consumption'. Rich with both concrete examples and featuring specially commissioned chapters by Henry Jenkins and John Hartley, the book is essential reading for anyone interested in the contemporary and future implications of online media. It will be particularly valuable for students and scholars in media, communication and cultural studies.

Privacy Concerns Surrounding Personal Information Sharing on Health and Fitness Mobile Apps Sen, Devjani, Ahmed, Rukhsana, 2020-08-07 Health and fitness apps collect various personal information including name, email address, age, height, weight, and in some cases, detailed health information. When using these apps, many users trustfully log everything from diet to sleep patterns. However, by sharing such personal information, end-users may make themselves targets to misuse of this information by unknown third parties, such as insurance companies. Despite the important role of informed consent in the creation of health and fitness applications, the intersection of ethics and information sharing is understudied and is an often-ignored topic during the creation of mobile applications. Privacy Concerns Surrounding Personal Information Sharing on Health and Fitness Mobile Apps is a key reference source that provides research on the dangers of sharing personal information on health and wellness apps, as well as how such information can be used by employers, insurance companies, advertisers, and other third parties. While highlighting topics such as data ethics, privacy management, and information sharing, this publication explores the intersection of ethics and privacy using various quantitative, qualitative, and critical analytic approaches. It is ideally designed for policymakers, software developers, mobile app designers, legal specialists, privacy analysts, data scientists, researchers, academicians, and upper-level students.

5G System Design Wan Lei, Anthony C.K. Soong, Liu Jianghua, Wu Yong, Brian Classon, Weimin Xiao, David Mazzaresse, Zhao Yang, Tony Saboorian, 2019-09-09 This book presents a detailed pedagogical description of the 5G commercial wireless communication system design, from an end to end perspective. It compares and contrasts NR with LTE, and gives a concise and highly accessible description of the key technologies in the 5G physical layer, radio access network layer protocols and procedures. This book also illustrates how the 5G core and EPC is integrated into the radio access network, how virtualization and edge computer fundamentally change the way users interact with the network, as well as 5G spectrum issues. This book is structured into six chapters. The first chapter reviews the use cases, requirements, and standardization organization and activities for 5G. These are 5G requirements and not NR specifically, as technology that meets the requirements, may be submitted to the ITU as 5G technology. This

includes a set of Radio Access Technologies (RATs), consisting of NR and LTE; with each RAT meeting different aspects of the requirements. The second chapter describes the air interface of NR and LTE side by side. The basic aspects of LTE that NR builds upon are first described, followed by sections on the NR specific technologies, such as carrier/channel, spectrum/duplexing (including SUL), LTE/NR co-existence and new physical layer technologies (including waveform, Polar/LDPC codes, MIMO, and URLLC/mMTC). In all cases the enhancements made relative to LTE are made apparent. The third chapter contains descriptions of NR procedures (IAM/Beam Management/Power control/HARQ), protocols (CP/UP/mobility, including grant-free), and RAN architecture. The fourth chapter includes a detailed discussion related to end-to-end system architecture, and the 5G Core (5GC), network slicing, service continuity, relation to EPC, network virtualization, and edge computing. The fifth and major chapter describes the ITU submission and how NR and LTE meet the 5G requirements in significant detail, from the rapporteur responsible for leading the preparation and evaluation, as well as some field trial results. Engineers, computer scientists and professionals with a passing knowledge of 4G LTE and a comprehensive understanding of the end to end 5G commercial wireless system will find this book to be a valuable asset. Advanced-level students and researchers studying and working in communication engineering, who want to gain an understanding of the 5G system (as well as methodologies to evaluate features and technologies intended to supplement 5G) will also find this book to be a valuable resource.

Introduction to TikTok Gilad James, PhD, TikTok is a social media platform that allows users to create and share short-form videos, typically set to music. It has become increasingly popular among younger audiences, with over 800 million active users worldwide. The app's algorithmic feed shows users content that is tailored to their interests and behavior, making it an addictive and highly engaging platform. TikTok has also become a hub for creativity and self-expression, with users often showcasing their talent in music, dance, and comedy. The app has also faced controversy over its handling of user data and potential security risks, leading to calls for greater regulation and oversight. Despite these concerns, TikTok remains one of the most popular social media platforms in the world today, with a growing influence on modern youth culture.

Harmful Content on the Internet and in Video Games Great Britain. Parliament. House of Commons. Culture, Media, and Sport Committee, 2008-07-31 The Internet has become an indispensable tool for communications, research and commerce. But this report addresses the growing public concern at the Internet's dark side: the easy availability of hardcore pornography, which people may find offensive, the uploading by ordinary people of film of real fights, bullying or alleged rape, or the setting up of websites encouraging others to follow extreme diets, or self-harm, or even commit suicide. In particular, there is increasing anxiety among parents about the use of social networking sites and chatrooms for grooming and sexual predation. The Committee welcomes the Government-commissioned report by Dr Tanya Byron on the risks posed by the Internet to children, and agrees that a UK Council for Child Internet Safety should be established. Sites which host user-generated content-typically photos and videos uploaded by members of the public-have taken some steps to set minimum standards for that content. The Committee recommends that proactive review of content should be standard practice for such sites, and calls for provision of high profile facilities for reporting abuse or unwelcome behaviour directly to law enforcement and support organisations. There is a distinct issue about labelling of video games to indicate the nature of their content. Two systems currently exist side by side: the industry awards its own ratings, and the British Board of Film Classification awards classifications to a small number of games which feature content unsuitable for children. The dual system is confusing, and BBFC should have responsibility for rating games with content appropriate for adults or teenagers.
