Television without frontiers? Great Britain: Parliament: House of Lords: European Union Committee, 2007-02-05 The draft Audiovisual Media Services (AMS) Directive, published in December 2005, was met with some alarm. It sought to extend the existing 'Television without Frontiers' Directive to new services which were seen to be competing for audience and revenue. In doing so it would have introduced inappropriate regulation on the new media sector. There have now been some changes to the original draft and a tightening of the definition of television like services. Although an improvement, the Committee is concerned that there is still not enough legal certainty. They are also worried about the need to defend the 'Country of Origin' approach to single market legislation and reject the idea that regulators should act to preserve the market dominance of existing players from new entrants. They are also unconvinced of the need for any quantitative restriction on advertising.

The European Union and the Culture Industries David Ward, 2016-02-17 This edited collection brings together leading academics in their respective fields to examine the European Union's impact on media and public policy. It provides an analysis of the broader areas of EU policy and links these together to give a greater appreciation of the nuances and scope of EU regulatory initiatives and their impact on the member states. Under a broad public interest perspective, the authors provide an assessment of the success of EU policy in protecting the public interest in the culture industries and respecting certain normative principles and balancing these with market dynamics.

Mathematical Modelling and Computer Simulation of Biomechanical Systems A. V. Zinkovsky, V. A. Sholuha, A. A. Ivanov, 1996 The book presents a new scientific approach to the problem of biomechanical systems description. This approach is based on development of a universal anthropomorphic model and employment of methodology of imitational dynamic modeling (IDM). The novelty of this approach is that there appears a possibility to operate with a whole class of models, derived from the universal model on the basis of motion separation principle. This is followed by utilization of iterational procedures realizing the method of successive approximations and resulting in description of the real motion with the pre-set accuracy level. By use of the IDM there has been for the first time ascertained certain laws governing human locomotions: presence of so-called controlling and stabilizing interlink moments, wavelike speeding of forces extremums along the kinematic chain, adaptation of control functions for astronauts motion coordination preservation. The book includes new theoretical conceptions explaining the deterioration of functional state of skeletal-muscular apparatus of astronauts due to zero-gravity influence.

The Virtual Life of Film D. N. RODOWICK, David Norman Rodowick, 2009-06-30 As almost every aspect of making and viewing movies is replaced by digital technologies, even the notion of watching a film is fast becoming an anachronism. With the likely disappearance of celluloid film stock as a medium, and the emergence of new media, what will happen to cinema--and to cinema studies? In the first of two books exploring this question, Rodowick considers the fate of film and its role in the aesthetics and culture of the twenty-first century.

Double Indemnity Robert Whitlow,2023-06-06 Someone stands to gain millions of dollars from a hunter’s accidental death . . . unless that death wasn’t an accident. Matt and Elena Thompson present the picture of perfection. But their enviable life isn’t all it seems. Their marriage is on the rocks, and financial disaster looms. Then Matt is killed in a hunting accident, and the questions and accusations begin to mount. Attorney Liz Acosta, newly arrived in the mountains of north Georgia after graduating from law school, plans to get some job experience on her resume before returning home to seek a position with a big-time firm. Intellectual pastor Connor Grantham isn’t sure that shepherding a rural congregation is what he ultimately wants to do with his life. Drawn to philosophy, theology, and nature, he’s beginning to feel more at home in north Georgia—especially after he meets the brilliant and energetic Liz. While Liz and Connor spend more time with each other and discover just how compatible two people from wildly different backgrounds can be, they’re also being drawn into the shadowy world of Matt and Elena Thompson. As the couple’s marriage counselor, Connor finds himself in the middle of their explosive arguments. As Elena’s attorney, Liz is caught in the tailspin created by Matt’s death. Together, Connor and Liz attempt to solve the mystery of what really happened to Matt. If his death is ruled an accident, then the double indemnity clause in his life insurance would go into effect, essentially doubling the payout. But as Liz sorts through the legal paperwork of who stands to gain an immense sum of money from Matt’s death, Connor is accused of the unthinkable with much more at stake than millions of dollars. Video Registration Mubarak Shah,Rakesh Kumar,2013-11-11 Traditionally, scientific fields have defined boundaries, and scientists work on research problems within those boundaries. However, from time to time those boundaries get shifted or blurred to evolve new fields. For instance, the original goal of computer vision was to understand a single image of a scene, by identifying objects, their structure, and spatial arrangements. This has been referred to as image understanding. Recently, computer vision has gradually been making the transition away from understanding single images to analyzing image sequences, or video understanding. Video understanding deals with understanding of video sequences, e. g. , recognition of gestures, activities, facial expressions, etc. The main shift in the classic paradigm has been from the recognition of static objects in the scene to motion-based recognition of actions and events. Video understanding has overlapping research problems with other fields, therefore blurring the fixed boundaries. Computer graphics, image processing, and video databases have obvious overlap with computer vision. The main goal of computer graphics is to generate and animate realistic looking images, and videos. Researchers in computer graphics are increasingly employing techniques from computer vision to generate the synthetic imagery. A good example of this is image-based rendering and modeling techniques, in which geometry, appearance, and lighting is derived from real images using computer vision techniques. Here the shift is from synthesis to analysis followed by synthesis.
