*Adapt Or Die: How the Internet Is Destroying Dealer Profits and What to Do about It* Kurt Baumberger, 2010-01-28 The Internet is destroying Dealer profits. One look at a Dealership's financial statements shows Dealers need to change how they go to market. Consumer-centric, insightful, implementation savvy, the author worked with Amazon, Dell, Best Buy, and others to build their E-Commerce businesses. Now, in this straightforward and revolutionary book, Baumberger shares his online retailing wisdom with the automotive industry. You'll see why old Dealership retail approaches won't work - and what simple, proven, profitable strategies exist today to get a jump on online solutions that will profitably drive sales in the next decade. Dealers will learn about how to stop customers from squeezing every nickel out of a deal, how to prevent implementing tactics in search of a strategy, how to build a virtual foundation for new, pre-owned, and fixed operations.

**Modeling & Simulation-Based Data Engineering** Bernard P. Zeigler, Phillip E Hammonds, 2007-08-07 Data Engineering has become a necessary and critical activity for business, engineering, and scientific organizations as the move to service oriented architecture and web services moves into full swing. Notably, the US Department of Defense is mandating that all of its agencies and contractors assume a defining presence on the Net-centric Global Information Grid. This book provides the first practical approach to data engineering and modeling, which supports interoperability with consumers of the data in a service- oriented architectures (SOAs). Although XML (eXtensible Modeling Language) is the lingua franca for such interoperability, it is not sufficient on its

own. The approach in this book addresses critical objectives such as creating a single representation for multiple applications, designing models capable of supporting dynamic processes, and harmonizing legacy data models for web-based co-existence. The approach is based on the System Entity Structure (SES) which is a well-defined structure, methodology, and practical tool with all of the functionality of UML (Unified Modeling Language) and few of the drawbacks. The SES originated in the formal representation of hierarchical simulation models. So it provides an axiomatic formalism that enables automating the development of XML dtds and schemas, composition and decomposition of large data models, and analysis of commonality among structures. Zeigler and Hammond include a range of features to benefit their readers. Natural language, graphical and XML forms of SES specification are employed to allow mapping of legacy meta-data. Real world examples and case studies provide insight into data engineering and test evaluation in various application domains. Comparative information is provided on concepts of ontologies, modeling and simulation, introductory linguistic background, and support options enable programmers to work with advanced tools in the area. The website of the Arizona Center for Integrative Modeling and Simulation, co-founded by Zeigler in 2001, provides links to downloadable software to accompany the book. The only practical guide to integrating XML and web services in data engineering Introduces linguistic levels of interoperability for effective information exchange Covers the interoperability standards mandated by national and international agencies Complements Zeigler's classic THEORY OF MODELING AND SIMULATION
