**The Effects of Interacting with a Computer-simulated Virtual Pet Dog on Children's Empathy and Humane Attitudes** Yueh-Feng (Lily) Tsai, 2008 Research has shown that children's caring for, or owning, a real pet animal is associated with higher levels of empathy and more positive attitudes toward the humane treatment of animals. However, studies that have examined whether a virtual pet animal would have similar associations are quite limited. With the growing sophistication of computer-based games such as Nintendogs, it becomes important to determine the socio-emotional effects of virtual pets. The purpose of this research was to investigate whether playing with and caring for a virtual pet dog would improve empathy and humane attitudes, and

whether these outcomes would be related to children's sex, play type and duration, and companion bonding. The sample comprised 51 students in grades 4 and 5 from a multicultural, working class, neighborhood school in Surrey, British Columbia. Although 78 percent were from a non-English culture, all communicated satisfactorily in English. A repeated measures design was used in this study and consisted of: (1) a first pretest followed by three weeks with no intervention, (2) a second pretest followed by a three week intervention with Nintendogs, and (3) a posttest. The students also completed a weekly log and were interviewed after the intervention. The instruments used were: (1) Bryant Index of Empathy, (2) Intermediate Attitude Scale, and (3) Companion Animal Bonding Revised Scale. Quantitative findings revealed that empathy and humane attitude posttest scores significantly increased, with females scoring higher on pretest and posttest. Also, students who developed stronger companion bonds tended to have higher empathy scores, and that play and care were positively correlated with humane attitude scores. Qualitative analysis of semi-structured interviews revealed that most students formed an emotional bond with their virtual pet dog, believing it possessed emotions, needs and interests. Play type and duration by females and males were similar. The research results suggest that playing with and caring for a virtual pet dog may promote empathy and humane attitudes, and that children's sex and play type and duration are related to empathy and attitude. Further research should be conducted with an independent control

group and a larger sample to better understand the socio-emotional effects of virtual pets on children.

Dog Zen Mark Vette, 2017-09-18 World-renowned dog behaviourist and psychologist Mark Vette (of Driving Dogs and Flying Dogs fame) shows you how to transform your dog and create a harmonious life-long bond. This book looks at how the dog evolved from the wolf, and the ancient co-evolved bond that exists between humans and dogs, before explaining how to get your dog into a fundamental calm 'learning state' so you can encourage the behaviours you want from your pet. Mark then explains how to train your new puppy, and if you have an older dog that wasn't trained properly at that crucial early stage, how to correct each of the top ten behavioural problems that occur. Drawing from Mark's own life and experiences there are case studies throughout with beautiful photographs of these amazing animals. The top ten

problems are: 1. Hyperactivity 2. Phobias 3. Excessive submission 4. Dog-to-dog aggression 5. Dog-to-human aggression 6. Barking 7. Separation distress 8. House training 9. Destructive behaviours 10. Recall This book is absolutely packed with information. It is a comprehensive practical guide combining the latest cognitive science with modern, loving, training techniques.

**Virtual Storytelling. Using Virtual Reality Technologies for Storytelling**  
Olivier Balet, Gerard Subsol, Patrice Torquet, 2003-06-30 The story is the richest heritage of human civilizations. One can imagine the first stories being told, several thousand centuries ago, by wise old men huddled around campfires. Since this time, the narrative process has been considerably developed and enriched: sounds and music have been added to complement the speech, while scenery and theatrical sets have been created to enhance the story environment. Actors, dancers, and technicians have replaced the lone storyteller. The story is no longer the sole preserve of oral narrative but can be realized in book, theatrical, dance, or movie form. Even the audience can extend up to several million individuals. And yet in its many forms the story lies at the heart of one of the world's most important industries. The

advent of the digital era has enhanced and accelerated this evolution: image synthesis, digital special effects, new Human-Computer interfaces, and the Internet allow one not only to realize more sophisticated narrative forms but also to create new concepts such as video gaming and virtual environments. The art of storytelling is becoming evermore complex. Virtual reality offers new tools to capture, and to interactively modify the imaginary environment, in ever more intuitive ways, coupled with a maximum sensory feedback. In fact, virtual reality technologies offer enhanced and exciting production possibilities for the creation and non-linear manipulation in real time, of almost any story form. This has led to the new concept of Virtual Storytelling.

**Listen Like a Dog** Jeff Lazarus, 2016-04-26 Have you ever talked to a dog. Not just the Who's a good boy? Spike's a good boy stuff, but really talked? About your struggles, your heartaches, your joys—baring your soul to a canine friend? If you have, chances are it made you feel free to say whatever you wanted, without the burden of justifying your position, sounding witty, or telling an entertaining story. Free to take your time, without fear of judgment or recrimination. Even if you can't have a real discussion, when compared to conversations with humans you'd probably admit that dogs are the better communicators—paws down. Why? Because even though they don't speak our language, they really listen. It's time to take a fresh look at listening and we need go no further than the furry best friend at our feet. Dogs don't

interrupt us, finish our sentences, offer advice, try to top our stories, or text us instead of talking to us. Dogs pay extremely close attention to us; they study our facial expressions, our body language, our eye movements, and our voice patterns. Dogs do not just listen with their ears, they listen with their entire being. True listening can enhance every relationship in one's life, and can transform broken associations and inject new life into business and social interactions. It is the magic ingredient that forges real connections with others. People want good listeners in their inner circle, they want to do business with them, they trust them and will share critical information with them. That means the person who masters this skill has enormous advantages, both in business and in his or her personal life. By listening like a dog, readers will find renewed connection and a deeper sense of compassion, companionship and understanding with the people in their lives.

I'm a Good Dog Ken Foster, 2012-10-25 Filled with inspiring stories and photographs, this heartfelt tribute to the pit bull celebrates one of America's most popular yet misunderstood dogs. Perhaps more than any other breed, the pit bull has been dogged by negative stereotypes. In truth, pit bulls are innately wonderful family pets, as capable of love and good deeds as any other type of dog. Setting the record straight, Ken Foster sings the praises of pit bulls in *I'm a Good Dog*, a gorgeously illustrated, tenderly written tribute to this most misunderstood of canines. Founder of the Sula

Foundation, which promotes responsible pit bull ownership in New Orleans, and the author of two acclaimed books about abandoned dogs, Foster has made it his mission to bring overlooked canines into the limelight. *I'm a Good Dog* traces the fascinating history of this particularly maligned breed. A century ago, the pit bull was considered a family dog, featured in family photos and trusted as loving companions for children. More recently, pit bulls have been portrayed by the media as stereotypes of everything they are not. Foster shatters that reputation through moving profiles of pit bulls that serve as therapy dogs, athletic heroes, search-and-rescue dogs, and educators, not to mention as loving pets. Foster also profiles many pit bull lovers, from Helen Keller and Dr. Seuss to actor Todd Cerveris, who took his pit bull on tour with him for the musical *Spring Awakening*. Proving that there's much to love and nothing to fear, *I'm a Good Dog* restores the pit bull to its rightful place as friend, family member, athlete and entertainer.

Personal stories of advice givers and their dogs are woven throughout. **A Network Orange** Richard Crandall, Marvin Levich, 2012-12-06 The primary thesis here is the authors' belief that the emergence of computers as an elemental force in our society must be viewed with a sceptical eye. Crandall and Levich, one a mathematician, the other a philosopher, strive, however, to present a balanced viewpoint, investigating and reflecting on the good and bad sides of this revolution, and seek meaning in this Information Age. Their examination is stripped of journalistic hyperbole, the cries of self-serving

prophets, and the sales pitches of the soft- and hardware industries. In separating the wheat from the chaff, the authors provide readers with a much better understanding of the limitations of these new technologies, along with propositions for their better use and within the societal context.
